Foreword—Catalog No. 80

This catalog contains Standard List Prices which are subject to discounts quoted in separate Discount Sheet which will be issued about every three months or sooner should fluctuations in prices demand it.

Order from this Catalog. All previous Catalogs are discontinued and should be destroyed, as Catalog 80 List Prices cancel and supersede all prices quoted in former catalogs.

This Catalog has been made with your convenience in view—the different classes of merchandise are arranged in perfect sequence—the size is standard—the matter is condensed and printed on light paper. The binding is strong and the book opens flat at any page—and stays there. The Catalog taken as a whole is just the right size and weight for easy handling.

When opening an account with us, we give you the benefit of large wholesale stocks—with the accompanying quick shipments—at prices that will prove advantageous to you.

The H. Channon Company does not handle the cheapest goods the market affords—quite the contrary—it deals in reputable supplies and machinery. It requires a longer time to build up trade along these lines, but we find that the number of our satisfied customers is increasing in greater proportion each year.

Over forty years of successful merchandising is silent proof that our policy is right.

Feb. 1st, 1917.

H.Channon Company.

Trade Customs, Terms, Etc.

All goods are billed at market prices prevailing the day order is received and F. O. B. cars Chicago.

Quotations are made for prompt acceptance, subject to change without notice and subject to delays occasioned by accidents, strikes, fires or other causes beyond our control and with the understanding that while goods proving defective will be replaced—no claims for damages or labor will be allowed. Right reserved to correct stenographic errors and reject orders without damage to ourselves should references and credit not be found satisfactory.

Terms are net cash in 30 days on approved credit unless otherwise agreed in writing. Where merchandise carries a discount for cash in 10 days—this discount will be found stated upon the invoice.

C. O. D. We do not ship C. O. D. unless accompanied by at least 25% of the order for standard stock goods—larger deposit on special material. We would be perfectly willing to ship C. O. D. were it not for the fact that some of the states offer no protection by this method.

Cash with Order. In most cases where we have not done business with you before and you know that you have no established credit rating—it will save considerable time in executing your order if all cash accompanies it—credit account can be established later. All export orders for shipment out of U. S. A. are invariably sold cash with order or cash against documents on a U. S. bank.

Parcel Post. With cash orders always allow sufficient to cover parcel post charges—weights can be taken from our catalog and charges computed from parcel post tables given in rear of catalog.

Freight and Express Rates. See rear of catalog.

Freight Shipments. Packages weighing 100 pounds or more we always ship by freight unless otherwise instructed—remember that freight charges on packages less than 100 pounds are for full 100 pounds and usually at 1st class rate even when goods take a lower classification when weighing over 100 pounds.

Damage Claims. A clear receipt from the transportation company places the responsibility for shortage or damage with the carrier and if there is any discrepancy or damage, do not pay the freight bill unless the damage or shortage is marked in ink on the face of the freight bill. This will enable you to recover on any legal claim, upon presentation of your bill for damage together with paid expense bill—or send the papers to us and we will collect for you at this end.

Shortage Claims or claims for defective material should be made immediately upon receipt of the goods or within a reasonable time. Transportation companies will not accept or pay claims unless filed within four months.

F. O. B. All prices, unless otherwise agreed in writing, are quoted F. O. B. cars Chicago. We can quote prices delivered anywhere—but with the weights given in catalog and

freight rates quoted in rear of catalog—you can arrive at the approximate charges without trouble.

Boxing. We charge for packing only in special cases such as packing for export shipment or mule back transportation—such packing is charged at actual cost for material and labor.

Addresses. Contractors, well drillers, dredgers and others who move from place to place—will please give home office address on all orders to save delays and trouble investigating credit.

Factory Shipments. Oftentimes, to keep our prices low, we find it necessary on machinery and other heavy goods to ship direct from factory, thus saving freight, cartage, double handling and other expenses.

Guarantee. We guarantee that every article in this catalog is exactly as described and represents full value for the price we ask. Such goods as prove defective, within a reasonable time, when properly used, we will replace free of charge at the factory, provided part claimed defective is returned to us for examination—under no circumstances will we be responsible for any damage beyond this.

Returned Goods. If stock goods are not found satisfactory after a reasonable time, they may be returned for credit or money refunded, provided we are notified in advance, giving cause for complaint, date of bill, and when returned we must have copy of bill of lading—without this notification goods may be refused at Chicago and held for storage at your expense. Goods are oftentimes sent in to us without instructions, in fact, without even the name of the shipper—making it impossible for us to locate charge or give credit.

We do not accept return of goods made to special order, nor Manila or wire rope after once cut off the coil or reel, except where mistake is our own. When returning by parcel post attach letter (with 2c stamp) to the package—giving reason for return.

Export Business. We have exported to foreign countries for many years and this trade is steadily growing. Our catalog, comprising, as it does, well selected lines—clearly described and illustrated, giving weights and other information very necessary to those at a great distance—is a hand book greatly appreciated and relied upon.

We are fully conversant with proper packing, marking, shipping and manifesting and we will quote F. O. S. vessel seaboard or C. I. F. to any known port. Correspondence in any language.

"Concentrate Your Purchases." While we still advocate the slogan of concentrating purchases—we do so, not only with the object of offering you an advantageous purchase on the whole order, but in conserving your time and effort as well. By this means, the material required for one or several of your orders, will reach you at the same time—at a considerable saving in freight, to those at a distance and especially to those in foreign countries.

One of our largest departments which has taken immense strides and is still growing rapidly. The following pages describe this line in detail and show the great variety of tools we carry. Our stock is one of the largest in the middle west—if not in the whole country, as our aim is to carry in stock every item listed.

Channon Tools are specified exclusively by many of the leading industrial shops in this and in foreign countries

Machinists' Hand Taps—Bay State

Orders for Hand Taps to and including $\frac{1}{4}$ " will be filled with taps having shanks full diameter of thread. Taps $\frac{1}{4}$ " and larger will be furnished with shanks size of bottom of thread.

We will furnish at regular prices, hand taps with full size shanks from $\frac{1}{4}$ " to $\frac{1}{2}$ " inclusive, and also hand taps with shanks size of bottom of thread, $\frac{3}{8}$ " and larger.

We will furnish at regular prices Hand Taps from $\frac{1}{4}$ " to $\frac{3}{8}$ ", $\frac{1}{2}$ " oversize and from $\frac{1}{4}$ " to $1\frac{1}{2}$ " inclusive, $\frac{1}{2}$ " oversize, in standard pitches only, of the "V" form.

Whitworth hand taps with the British Standard Fine Thread, Set furnished at regular prices.

United States Standard form of thread will be furnished unless otherwise specified.

Sizes, lengths and threads not listed are subject to special prices. Left hand taps are special.

Until recently the Association of Licensed Automobile Manufacturers, commonly termed A. L. A. M., had under their jurisdiction, technical matters pertaining to motor construction. Their standard of thread is now referred to as the S. A. E. standard, all matters being handled by the Society of Automobile Engineers. It has been extended to comprise sizes up to $1\frac{1}{2}$ inches.

Important Information on Ordering Taps

Owing to the greater demand for Taps and Dies with U. S. Standard Form Thread than for the V Standard, all orders will be filled, unless otherwise specified, with U. S. Standard Form Threads. Other Forms of Threads will be furnished only when so ordered. All Taps, excepting Common Pipe Taps, with left hand threads are special, and the price is governed by the quantity purchased. All sizes, lengths and threads, excepting standard sizes, not included in the list are special and are subject to special prices.

In compiling the lists and descriptions on the following pages, we have endeavored to arrange them in such a manner as to simplify ordering, thereby avoiding mistakes and saving delay in filling orders.

In ordering listed material, please use our terms when possible, that we may know exactly what you require. The observance of this request will facilitate filling orders and obviate disappointment. Orders for Taps and Dies, similar to listed goods, but special in some dimensions, must show the exact measurements of the special parts. When Taps or Dies differing widely from any shown in the following lists are ordered, a sketch showing all dimensions or a sample, should be sent.

Machine or Nut Taps

U. S. Standard Thread is always furnished unless otherwise specified. 32nd sizes, from $\frac{1}{4}$ " to 1" inclusive are also furnished in V thread only. Owing to their extra length, these taps are preferable in many places to the regular hand taps. The diameter of the shank is the same as the bottom of the thread which permits the shank to extend into the tapped hole. Left hand threads are special.

Tapper Taps

Round Square Acme / National

U. S. Standard thread is always furnished unless otherwise specified. Round shanks regularly furnished. Tapper Taps with shanks as shown furnished upon request. Left hand threads are special. The 12-inch lengths are carried in stock. In ordering specify kind of shank, style of thread and length overall desired. Tapper Taps are used mostly for tapping blank nuts.

H. Channon Company Chicago

Pipe Taps, Hobs and Reamers

Tap

Hob

Reamer

Ordinary taps are used mostly for cleaning old threads and occasionally for cutting new threads. Our Extra Grade taps are made purposely for cutting new threads continually, and are made of such quality and with such accuracy that for manufacturing purposes they cannot be excelled. We highly recommend them for that purpose.

Pipe Taps will be furnished with right or left hand threads, but right hand threads are regularly furnished unless otherwise specified. Straight (Plug) Pipe Taps furnished at regular prices.

Extra grade furnished unless otherwise specified.

Stay Bolt Taps

When ordering give diameter at largest part, number of threads to inch, state whether V or U. S. form of thread and length over all. For taps of special specifications, give all measurements as indicated by letters on above cut. Blank order forms sent upon request.

Solid bolt dies are used for threading stay-bolts.

Stay-bolt Taps 18, 21 and 24 inches long in sizes from 3/4 to 1 1/2 inches diameter, 12 threads per inch, in the proportions given below are carried in stock. Sizes shorter than 16 inches will be charged as 16 inches long. U. S. Std. Thread furnished unless V Std. is ordered.

No. 219 A Mud Plug or Washout Taps

Used for Tapping Washout Holes in Locomotives

A set consists of four taps having $1\frac{1}{4}$ -inch taper in 12 inches, and having twelve threads to the inch.

Tap No. 1 is $1\frac{3}{4}$ inches in diameter at small end, and Tap No. 4 is 3 inches in diameter at large end.

The taps are marked as shown in the illustration and correspond with taper plugs bearing the same numbers as the twelve diameters shown in the four taps.

The taps are $6\frac{1}{2}$ inches long and all have the same size shank square.

All taps have 12 threads to the inch and can be furnished in U. S. Standard or V form of thread.

U. S. Standard form of thread furnished unless otherwise specified. Sizes, lengths and threads not listed, subject to special discount. Left hand taps are special.

Sizes and Prices per Set

No. 1— $1\frac{3}{4} \times 2\frac{1}{8}$ in. \$6.00 No. 2— $2\frac{1}{8} \times 2\frac{3}{8}$ in. \$7.50 No. 3— $2\frac{3}{8} \times 2\frac{1}{2}$ in. \$9.00 No. 4— $2\frac{1}{2} \times 3$ in. \$10.50

No. 236 Spindle Stay-Bolt Taps

All taps have 12 threads to the inch and can be furnished either U. S. Standard or V form of thread. U. S. Standard form furnished unless otherwise specified.

Taps shorter than 8 inches charged as if 8 inches long and fractions of an inch in length charged as full inch.

Spindle stay bolt taps are proportioned as follows length over all $7\frac{7}{8}$ inches, length fluted thread $3\frac{1}{4}$ inches, length unfluted thread $2\frac{3}{4}$ inches, diameter of spindle $\frac{3}{8}$ inches, length spindle 11 inches.

The Acme Standard Thread

The Acme standard thread is an adaptation of the most commonly used style of worm thread and is intended to take the place of the square thread. It is a little shallower than the worm thread, but the same depth as the square thread and much stronger.

The various parts of the Acme standard thread are obtained as follows:

$$\text{Width of point of tool for screw or tap thread} = \frac{.3707}{\text{No. threads per inch}} - .0052$$

$$\text{Width of screw or nut thread} = \frac{.3707}{\text{No. threads per inch}}$$

$$\text{Diameter of tap} = \text{diameter of screw} + .020$$

$$\text{Diameter of tap or screw at root} = \frac{1}{\text{No. threads per inch}} + .020$$

$$\text{Diameter of screw} = \frac{1}{\text{No. threads per inch}} + .020$$

$$\text{Depth of thread} = \frac{1}{2 \times \text{No. threads per inch}} + .010$$

Table of Thread Parts

St. Louis Reversing Tapping Chuck

A strong and simple device for use in drill press or lathe. To operate, feed the drill press down in the ordinary manner until the desired depth is reached. The chuck is reversed by returning the drill press spindle, or chuck may be thrown out of gear when tap reaches required depth by setting stop collar on drill spindle one quarter inch higher than depth of hole when tap is resting on surface of work.

By the use of this machine a man can tap two perfectly true holes in less than three minutes; without it, fifteen minutes' time is necessary. On heavy work a drill may be put in chuck and hole drilled and tapped without moving. Where considerable tapping is done the investment in one of these machines will pay a high rate of interest in saving of labor.

Price includes any size Morse Taper Mandrel and Horton or Skinner Tap Holding Chuck, fitted ready for use.

No. 1. Capacity $\frac{3}{8}$ inch machine taps, $\frac{1}{2}$ inch pipe taps, Morse Taper Arbor No. 1 or No. 2. Price each..... \$30.00

No. 2. Capacity $\frac{1}{2}$ inch machine taps, $\frac{1}{2}$ inch pipe taps, Morse Taper Arbor No. 2, 3 or 4. Price each..... 34.00

No. 3. Capacity $\frac{5}{8}$ inch machine taps, $\frac{3}{4}$ inch pipe taps, Morse Taper Arbor No. 2, 3 or 4. Price each..... 40.00

No. 4. Capacity $\frac{3}{4}$ inch machine taps, $\frac{1}{2}$ inch pipe taps, Morse Taper Arbor No. 3 or 4. Price each..... 48.00

*Sent unless otherwise ordered.

Bench Tapping Machine

These little machines are very convenient tools for any machine shop doing a limited amount of tapping. Made with reverse mitre gears, which are formed from solid bar steel and cut on a gear cutter. Clutch is hardened tool steel and bearings are babbitted. Base is provided with 4 holes for bolting or screwing down machine to bench.

No. 11. Capacity 0 to $\frac{1}{4}$ inch. Tight and loose pulleys $3\frac{3}{4} \times 1\frac{1}{2}$ inch face for 1 inch belt. Width over all, 11 inches. Base $5\frac{1}{4}$ inches in diameter. Height over all, $8\frac{3}{4}$ inches. Weight 10 pounds. Price each..... \$12.00

No. 12. Capacity 0 to $\frac{3}{8}$ inch. Single pulley for use with countershaft $8 \times 1\frac{3}{4}$ inch face. Width over all 14 inches. Diameter of base, 7 inches. Height over all 13 inches. Weight about 20 pounds. Price each..... 18.00

Drill Speeder

or

High Speed Drilling Attachment

These machines increase the speed of small drills while being used in the larger class of drill presses—say from twenty inch to largest radial.

All sizes increase the speed three times. No. 2-L has a sensitive feed lever giving rack traverse of $1\frac{1}{4}$ inch, and is intended for rather light drilling such as Template making. Tool-maker's use, dowel pins, oil holes, etc. All others are operated by the feed mechanism of the main machine.

Dimensions and Prices

- No. 2.** With chuck for drills up to $\frac{1}{2}$ inch; Shank No. 2 Morse, length without shank and chuck $5\frac{1}{2}$ inches. Net, 8 pounds. Boxed, 14 pounds..... \$50.00
- No. 3.** With chuck for drills up to $\frac{3}{8}$ inch; shank No. 3 Morse, length without shank and chuck 6 inches. Net, 14 pounds. Boxed, 21 pounds..... 55.00
- No. 3B.** With No. 1 Morse hole in spindle instead of chuck; shank No. 3 Morse, length without shank and spindle taper, 6 inches. Net, 14 pounds. Boxed, 21 pounds..... 55.00
- No. 4.** With chuck for drills up to $\frac{1}{2}$ inch; shank No. 4 Morse, length without shank and chuck, $6\frac{3}{4}$ inches. Net, 19 pounds. Boxed, 28 pounds..... 80.00
- No. 4B.** With No. 2 Morse hole in spindle instead of chuck; shank No. 4 Morse, length without shank and spindle taper, $6\frac{3}{4}$ inches. Net, 17 pounds. Boxed, 26 pounds..... 66.00
- No. 2L.** With chuck for drills up to $\frac{1}{2}$ inch; shank No. 3 Morse, length without shank and chuck, $5\frac{1}{4}$ inches. Net, 14 pounds. Boxed, 21 pounds. (See page 2 in Circulars)..... 66.00

Without the use of sleeves Nos. 2, 2L, 3 and 3B cannot have over No. 3 Morse taper shank. Nos. 4 and 4B cannot have over No. 4 Morse taper shank.

St. Louis Tapping Machine No. 14

This machine is so constructed that the operator has every facility for handling work rapidly, and the number of holes that may be tapped is limited only by the speed of the operator.

The work is brought up to the tap by the foot treadle, leaving both hands free to handle and hold the work firmly. It is unnecessary to reach up to a handle at every operation.

The platen stem works in a long sleeve, and the work comes up to the tap true, insuring straight holes and avoids breaking taps.

All gears are made of steel. Cone pulleys are turned inside and out.

Height, inches..... 60

Height to Platen, inches..... 44

Distance from Platen to spindle, inches..... 10

Distance from column, to center of spindle, inches..... $5\frac{1}{4}$

Size of tight and loose pulleys..... $4 \times 1\frac{1}{4}$ in.

Both cone pulleys..... 6 and $4\frac{3}{4} \times 1\frac{1}{4}$ in.

Speed recommended by tap manufacturers (many run them faster)..... 300 to 600

Capacity $\frac{3}{8}$ inch machine taps

$\frac{1}{2}$ inch pipe taps.

Weight..... 120 lbs.

Price..... \$80.00

Price with tap holding chuck..... 92.80

5/8 Inch

1/2 Inch

Adjustable Round Split Dies

Used in hand stocks and also extensively in automatic screw machines. Our dies are ground accurately on the outside and therefore the periphery is in perfect alignment with the cutting edges. We especially recommend them for manufacturing purposes. Stocks holding these dies are shown on another page. All orders filled with U. S. Standard thread unless otherwise specified. V. S. A. E. or Whitworth threads also furnished in fractional sizes. Left-hand threads and threads not listed are special.

Round Split Dies

These dies are furnished as regular in all sizes and threads under which hand taps are shown, which will be found on another page.

All orders will be filled with U. S. Standard thread unless otherwise specified. V form, S. A. E. or Whitworth form of thread furnished at regular prices. Left-hand threads are special.

Solid bolt dies are furnished in U. S. Standard and V form of thread. All orders filled with U. S. Standard unless otherwise specified. These dies are used principally in lathes and bolt machines and for general repair work. All sizes from $\frac{1}{4}$ inch to $1\frac{3}{8}$ inch, $2\frac{1}{8}$ inches square will fit the No. 1 Channon Pipe Stock.

Screw Plates—Bay State Make

Regular Machine Screw and Small Fractional Sizes

These sets are very popular for threading small precision work. The dies furnished are of the round adjustable type which can be adjusted for over or undersize thread cutting. Screw plates containing dies $\frac{1}{8}$ -inch diameter are furnished without guides. Those containing dies $\frac{1}{4}$ to 1-inch diameter are furnished with and without guides as indicated in the list below. When guide is used, it is only necessary to drop it into the stock. The die holds it in place and in perfect alignment. Tap wrenches are included only where designated by a number in the list below. A screw driver is included with each set. The entire set is packed in a handsome hardwood box with separate compartments for each item.

If desired, we can substitute any regularly listed sizes or pitches in place of those regularly furnished with the set.

Screw Plates—(Continued) Bay State

Regular Sets

Full Mounted Sets

Screw plates listed below are for cutting fractional sizes only, from $\frac{1}{8}$ to $1\frac{1}{2}$ inches, and furnished with U. S. standard form of thread unless otherwise ordered. "V" or S. A. E. standard form furnished at same price when so ordered. Sets contain dies in collets with guides, taps and adjustable tap wrenches.

These plates will finish the work at one cut, making screws equal to lathe work, without raising burrs above the true size. Nuts and bolts threaded with them need not be matched; they always correspond. Dies are adjustable for wear, under and over size cutting, by means of the screws in the collets, one of which engages the slot in the die, and having a cone point, adjusts the cutting size by forcing the sides of the die apart or allowing them to come together as the screw is moved in or out. The other screws hold the die solidly in place. The guide being a part of the collet, and the dies being always adjusted to the proper size in the collet, it is only necessary to drop the entire unit into the stock when it is desired to change the size. One handle of stock is threaded and screws into a slot in the collet holding it rigidly in place.

Specify Size and Style of Thread

Set Nos.	Price per Set	Cutting Sizes	Diameter of Dies	Diameter of Collets	Length of Stocks	No. of Tap Wrench	Weight, Pounds

Screw drivers to fit adjusting screws in dies furnished with each of the above sets.

Full Mounted Screw Plates

Sets Containing Stock, Guide and Die for Each Size, and Adjustable Tap Wrenches

These sets are the same quality and will do the same high class work as the regular sets described above. One stock is furnished with each die, so that it is never necessary to change the size of the die in the stock, but each size is always ready for instant use.

Set Nos.	Price per Set	Cutting Sizes	No. of Tap Wrench	Weight, Pounds

Other regular sizes and pitches will be substituted for those listed when so ordered.

Screw Plates for Garage Use

These sets are arranged especially for garage use. Sets Nos. 66A and 77A contain both U. S. S. and S. A. E. sizes. Sets Nos. 60A, 70A and 80A contain S. A. E. sizes only.

Set No. 66A. Cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$. Dies $1\frac{1}{2}$ inch diam. Collets $1\frac{1}{4}$ inch diam. U. S. S. Taper Taps. S. A. E. Plug Tap. No. 17 Stock. Both U. S. S. and S. A. E. No. 15 Adjustable Tap Wrench. Price per set. \$18.00

Set No. 77A. Cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$. Dies $1\frac{1}{2}$ inch diam. Collets $1\frac{1}{4}$ inch diam. U. S. S. Taper Taps. S. A. E. Plug Taps. Nos. 17 and 18 Stocks. No. 16 Adjustable Tap Wrench. Price per set. 27.00

Set No. 60A. Cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$. Dies $1\frac{1}{2}$ inch diam. Collets $1\frac{1}{4}$ inch diam. Plug Taps No. 17 Stock. No. 15 Adjustable Wrench. 12.00

Set No. 70A. Cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$. Dies cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $1\frac{1}{2}$ inch diam. Dies cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $1\frac{1}{4}$ inch diam. Collets $1\frac{1}{4}$ inch and $2\frac{1}{4}$ inch diam. Plug taps. Nos. 17 and 18 stocks. No. 16 Adjustable Wrench. Price per set. \$19.00

Set No. 80A. Cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{1}{2}$. Dies cutting $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $1\frac{1}{2}$ inch diam. Collets $1\frac{1}{4}$ and $2\frac{1}{4}$ inch diam. Plug Taps. Nos. 17 and 19 Stocks. Nos. 15 and 17 Tap Wrenches. Price per set. \$28.50

Full Mounted Screw Plates
Bull Dog

This line of screw plates will be found serviceable and reliable, and the price is very reasonable. They are so constructed that the guides can be removed in an instant for cutting close to head. A separate stock is provided for each die, and the handle of the stock is open so that each one may be hung up when not in use. If desired. Stocks will hold standard round adjustable dies, which can be furnished in all forms of pitches and cutting sizes.

No. of Set	16-A	18-A	20-A	22-A	24-A	Outside Diam. of Dies	Length of Stocks, Inches
Price per set	\$8.00	\$11.00	\$12.00	\$16.00	\$20.00

U. S. Standard form of thread furnished unless otherwise specified.
S. A. E. or "V" standard form of threads and pitches furnished at regular prices.

Automobile Screw Plates
In Leather Roll

No. 1470. $\frac{1}{4}$ to $\frac{3}{4}$. 7 sizes. In leather roll, per set. \$13.50

Stock 14 inches long. Round Adjustable Dies $1\frac{1}{2}$ in diam.; and Plug Taps cutting $\frac{1}{4}$ -28, $\frac{3}{8}$ -24, $\frac{1}{2}$ -20, $\frac{5}{8}$ -18, $\frac{3}{4}$ -18, S. A. E. Standard. Weight 4 pounds.

No. 1475. 5 sizes. $\frac{1}{4}$ -28, $\frac{3}{8}$ -24, $\frac{1}{2}$ -20, $\frac{5}{8}$ -18, $\frac{3}{4}$ -20. Price per set. \$10.00

Contained in leather case as illustrated above. Plug taps; round Dies 1 inch outside diameter; Stock 9 inches long; adjustable Tap Wrench, "T" Style. Above set furnished in hardwood case at same price. Weight 4 pounds.

All Taps and Dies furnished with S. A. E. Standard Pitches unless otherwise specified. U. S. Standard Pitches or "V" Standard Forms and Pitches furnished at regular prices.

No. 2500 Automobile Screw Plate
In Leather Case or Hardwood Box

Designed especially for repair work on the popular Ford Automobile, but also well adapted to a great variety of cars. Set contains 16 Tap, 16 Dies, 2 Stocks and 2 Tap Wrenches.

Set packed in a handsome, durable Goat Skin case (canvas lined as illustrated, or in a strong hardwood box. Weight 4 pounds. Price per set \$18.50

Contents

To fit $6\frac{1}{2}$ -inch Stock and 4-inch T Tap Wrench.
No. No. No. No.
Cutting sizes. 6 10 12 14 $\frac{1}{4}$ $\frac{3}{8}$ $\frac{1}{2}$
Threads per inch. 32 24&32 24 24 32 20 18&24

One Tap (plug), one Die ($\frac{1}{2}$ inch diameter) and one Guide for each cutting size.

To fit 9-inch Stock and $5\frac{1}{2}$ -inch T. Tap Wrench.
Cutting size. $\frac{1}{4}$ $\frac{1}{2}$ $\frac{3}{8}$ $\frac{1}{2}$ $\frac{5}{8}$ $\frac{3}{4}$
Threads per inch. 16&24 16 14&20 20 Pipe

One Tap (plug), one Die (1 inch diameter) and one Guide for each cutting size.

"Little Giant" Screw Plates

These dies are beveled on all sides, which makes them reversible so that the same die can be used for either plate or machine. They will cut clean-cut threads and are adjustable for over or under sizes not to exceed 1-32 inch over or under the even size. The dies are inserted in collet together with a correct guide as shown in illustration. U. S., "V" or S. A. E. Standard Form threads furnished. U. S. Standard Form furnished regularly. Set includes adjustable tap wrench.

Die and Collet

Boiler Makers' Screw Plates

This assortment has been made up specially to meet a demand for a screw plate for boiler makers. It consists of a stock and three dies, all cutting 12 threads to the inch.
The stock is very strong but light in weight, handsomely mottled and has handles of steel tubing, knurled.

The assortment is packed in small space in a fine wooden case, and we recommend it to give splendid service to boiler makers, for whom it was designed. Assortment consists of one 26-inch stock and three dies. Collets $2\frac{3}{4}$ inches in diameter. Cuts 12 threads to the inch in the following sizes: $\frac{1}{4}, \frac{3}{8}$ and 1.
Price each.....\$11.00
Extra dies and collets to fit this stock can be furnished in the following sizes:
 $\frac{1}{4}$ and $\frac{3}{8}$ inch, each.....\$1.50
 $\frac{1}{2}$ and $\frac{3}{4}$ inch, each.....1.75
Collets, price each......50

Green River Screw Plates

Set in Case

Sectional

Exterior

The two right-hand cuts represent a die and guide complete. The cup-headed screw on the left holds the halves firmly together, acting as a hinge, while the size is regulated by the wedge-shaped, taper-head screw on the right. Limit of adjustment of dies is $\frac{1}{2}$ -inch over or under even size. U. S. "V" or S. A. E. Standard Thread forms are optional. U. S. Standard Form furnished unless otherwise ordered.

Oster Patent Adjustable Screw Plates

With Adjustable Dies and Guides. United States Standard Form Thread

Provided with adjustable self-centering guides which fit the rod or bolt perfectly; straight threads are sure to result. Guides are detachable to allow cutting thread close to work. After thread is cut, dies are instantly opened; no backing over the finished threads. Dies can be sharpened on an ordinary grindstone. Dies can be quickly adjusted for over or under size. Two cuts may be taken when operator chooses. Duplication of threads is accomplished by gauge which sets the dies repeatedly to exact size. U. S. standard thread regularly furnished, but V or S. A. E. standard furnished when required. Each set is complete with taps and packed in a handsome hardwood box.

The Channon Thread Cutting Machine

A Thread Cutter to do Quantity Jobs Equal to Machines Costing Several Times the Price

Furnished with Dies Only or with Dies, Taps and Tap Chucks

The Channon Thread Cutting Machine is a new and practical tool for cutting threads on bolts or bars of any length. Very serviceable for the Machine shop, Blacksmith shop, etc. Contractors find this tool very practical for re-threading bolts used in connection with concrete forms.

It is furnished with dies complete as illustrated or with dies, taps and tap chucks complete at a very moderate price.

The illustration accurately portrays the machine. It has a rack for starting the thread on the bolt instantly and with the long levered crank, which can be shortened or lengthened according to the work.

No. 1 With Dies Only cutting $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{5}{8}$ and $\frac{3}{4}$ inch. Weight 40 lbs.

Price per Set.....\$18.00

No. 2 With Dies Only cutting $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch. Weight 45 lbs. Price per Set.....22.00

No. 3 With Dies, Taps and Tap Chuck, complete, cutting $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{5}{8}$ and $\frac{3}{4}$ inch. Weight 45 lbs. Price per Set.....24.00

No. 4 With Dies, Taps and two Tap Chucks, complete, cutting $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch. Weight 55 lbs. Price per Set.....30.00

Furnished with U. S. Standard Thread unless otherwise ordered. If desired we will furnish "V" Standard Thread or S. A. E. Standard at regular prices.

Tap Wrenches

Adjustable Tap and Reamer Wrenches

Drop forged from bar steel, with hardened tool steel jaws, properly tempered. The handles are made of steel tubing, thus eliminating all unnecessary weight, but with ample strength for any work. Ends are knurled, affording a secure grip. Center parts are mottled with an onyx finish. Well made and handsomely finished throughout. A very superior article.

Adjustable "T" Tap Wrench

Made of the best tool steel, carefully hardened and tempered

No. 1T will take machine screw taps Nos. 2 to 14, and hand taps ⅞ to ¼ inch.

Price, each\$0.50

Approximate weight, each, ⅞ lbs.

No. 2T will take machine screw taps Nos. 14 to 24, and hand taps ½ to ½ inch.

Price, each\$1.00

Approximate weight, each, ⅞ lbs.

Ratchet "T" Tap Wrench

This Tap Wrench is made with a sliding handle and is intended for working in corners, cramped places or for heavy work. By turning a small handle from one side to the other a reverse

motion is obtained. When small handle is placed in the center head is locked and will not ratchet. These changes can be instantly made and will be found very useful.

Toledo Adjustable Pipe Threading Devices

No. 00

No. 1

Nos. 3 and 4

No. 2

No. 25

No. 0

Toledo Pipe Threading Tools have revolutionized all previous ideas about threading pipe by hand. Provided with a Toledo Tool, one man can do with less labor, that which had previously required two to four men. Toledo Tools eliminate friction at the cutting edge, securing this result by using very narrow dies, and by mechanically giving these dies a receding motion while they are cutting the thread. Toledo Tools in all sizes work very easily, one man can cut any size thread, even up to 12 inch pipe.

No. 1. A boy or man can readily thread 2-inch pipe with this tool. By an ingenious arrangement, the dies recede as thread is cut, producing a clean cut thread of standard taper. No. 1-A is exactly like No. 1, but has in addition a ratchet, for use when working in close quarters.

No. 1½-R is for 2½ and 3 inch standard pipe, but is also made for 2, 2½ and 3 inch pipe with 11½ threads per inch, and intended for the oil well trade exclusively.

No. 2. Threading 2½ to 4 inch pipe, because of its wide range of capacity is the most popular Toledo Machine.

No. 3 weighs but 155 pounds. One man can thread 4½ to 8 inch pipe with it more rapidly than by any other method, and as easily as the smaller sizes.

No. 4. Two men are required to adjust this tool on the pipe, but one man can operate it. It is extremely simple and very light for its capacity.

No. 00 threads pipe ¼ inch to ¾ inch; each size die is held in separate collet and guide, die head simply drops into the handle and the frame which regulates left or right ratchet holds it intact; an exceptional tool for working into close quarters.

No. 0 will cut ¼ and ½ inch thread with one set of dies, ¾ and 1 inch with another and 1½ inch with another. It measures but 24 inches from tip to tip of handles and weighs less than 8 pounds. No. 10 is practically the same as No. 0, but differs in capacity. No. 10-A is identical with No. 10 except that it may also be operated with a ratchet.

No. 25. This tool uses but one set of dies for cutting the entire range of seven sizes. Two sets of dies are furnished with each tool.

Tools for Right Hand Threads Regularly Furnished. Left Hand Tools Shipped from Factory

Beaver Pipe Threading Tools

Beaver stocks have narrow, reeding dies which make pipe threading easy when they are used. The Beaver Die cuts easier with each turn because it is removing less metal all the time. At every turn a die cam is revolved, automatically reeeding the die. One set of dies will cut all size threads, except in the Nos. 61, 80 and 90. Over and undersize threads may be cut without manipulation. Crooked threads may be cut if so desired.

No. 25 Regular Stock
1 to 2-Inch

No. 26 Ratchet Stock

No. 41 Ratchet Stock

No. 25 and 26 are similar, except that No. 26 is a ratchet tool.

Both thread 1, 1¼, 1½ and 2-inch pipe, wrought iron or steel. They are easy workers, using the narrow reeding die which works easier as the thread progresses. Only one set of dies is used. This is instantly adjusted to any size by shifting control lever. A self-centering chuck makes bushings unnecessary. The vanadium steel dies may be resharpened on a grindstone. Both tools are compact, "one-piece" threaders with absolutely no loose parts. The No. 26 ratchet tool is preferred by many because it can be used in ditches, against walls and other confined places.

No. 61 2 $\frac{1}{2}$ -6 Inch Beaver Stock

It threads wrought-iron or steel pipe, 2½ to 6 inches. It has the same structural advantages as the No. 41. Each die is a separate unit, leaving the strain on its side wings, thus removing all strain from the adjusting plate and allowing it to move freely even on the largest sizes. Two sets of dies are required to cover the large range of sizes.

No. 80 4½-8 Inch and
No. 90 9-12 Inch Beaver Stock

Similar in construction to the No. 61, it requires to operate only 10 or 12 inches of space around the pipe. It is possible for one man to cut a perfect thread on 12-inch steel pipe using the No. 90. They will give more satisfactory all around service than a threading machine. Their light weight enables them to be transported from one job to another easily and quickly.

Beaverette Die Stocks

It threads $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$ and $\frac{3}{4}$ -inch pipe without changing dies. The two sets of dies (required because of different thread pitch between $\frac{3}{8}$ and $\frac{1}{2}$ -inch pipe) are held in one plate and instantly adjusted to thread any size. A strong and compact, "one-piece" threader—without any loose parts. A universal centering device does away with the loose bushings.

H. Channon Company Chicago

Oster Bull Dog Die Stocks

Regular Stock
Nos. 101 to 106

Ratchet Stock
Nos. 102R to 106R

This line of stocks has Self-Locking and Adjustable Dies. The dies are controlled by the lever handle on top, as shown in the cut. By moving this handle to the right as far as it will go, the dies are set and held in place while cutting.

One movement of the top lever handle will open or close the dies. No resetting or backing off the threads.

The tool is equipped with Self-Locking and Centering Guides which do away with loose-bushings. These guides are operated on a scroll and can be set to all sizes the tool will thread. The more pressure on the end of the guides, the more solid the locking arrangement. Great pressure on the ends of the guides only tends to lock them more firmly in position.

Bull Dog Die Stock No. 82

This tool has brand new features. The double end dies ($\frac{1}{4}$ inch and $\frac{3}{8}$ inch on one end— $\frac{1}{2}$ inch and $\frac{3}{4}$ inch on the other) are protected by a casing; hence teeth cannot cut user's hands or be damaged when stock is thrown about. The dies have a stop on each side so that they cannot be set beyond proper place in stock.

Price, Complete cutting, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$ inch, net..... \$13.00

Price, extra dies, right or left, per set (4 pieces), 4 sizes pipe, net 2.00

Extra dies Nos. 3B and 3BR, \$2.00 per set. No. 4BR \$5.00 per set.

No. 3B is exactly the same as No. 3BR excepting ratchet.

Oster Hand Pipe Threading Machine

No. 201
Front View

Oster Pipe and Nipple Machines meet the demand for a pipe machine which will perform every one of the many pipe threading jobs in ordinary use,—pieces long or short, straight or bent, over or under size, nipples of any length, and all threaded nipples. All this work can be performed on one machine without any complicated or difficult changes in equipment and with great rapidity. Oster Pipe Threading Machines will thread shorter pieces than can be handled by the ordinary pipe threading machine.

The No. 201, 204 and 206 machines listed below are strictly one man outfits. They are provided with a patent, adjustable, quick opening and closing device, instantly adjustable to all variations in fittings; the quickest and simplest method of changing the chasers which are inserted and removed through the shell of the head. The operator can clean out the chaser slots without taking the head apart. Dies are self locking with one movement of the setting handle. Throw it one way, and the pipe is released; throw it the other way and the dies are set to the same size. The dies thread two sizes without

change. They are easily set for any size thread by adjusting two screws. When the thread is finished, trip the die lever and open the dies right off the work. It is unnecessary to stop, reverse and back the machine off the finished threads.

Vise is self centering and straight threads are assured. It is of the open type, which enables the operator to change the work quickly and thereby increase the capacity of the machine. It is started by revolving the hand wheel at the side. The gripping jaws are tool steel, tempered tough and hard.

The No. 201 Hand Machine threads all pipe from $\frac{1}{4}$ to 2 inch. It is equipped with the lever opening die head and self centering pipe vise described above. It is double geared and can be operated with the least possible labor consistent with rapid work. It is not made with cutting off attachment.

Nos. 204 and 206 Machines are double geared, one speed for the small sizes or the first threads of larger pipe; the other speed for the larger sizes. The change from one speed to the other is quickly made while cutting a thread without removing the crank or any part; no wrench or tool of any kind is necessary.

Nos. 204 and 206

H. Channon Company Chicago

Duplex Die Stocks

New Pattern

The main feature of these tools is the arrangement for holding and adjusting the dies. The lug, shown in illustration, engages in notches in the face plate for the different sizes. The holding does not depend on any frictional clamps, screws or nuts, but on a positive lock. The releasing is accomplished instantly and avoids turning back over the finished thread.

The Nos. 48, 48½ and 49 are the same as Nos. 43, 43½ and 45, except in a ratchet pattern, which is especially useful for work in confined space. This pattern is, however, suitable for all work, either in a ditch or at a bench, and can be operated by one or two handles.

Ratchet Pattern

Buckeye Die Stocks

With expanding dies for ½ to 6-inch pipe. The dies are made to cut easily by being formed with a short cutting edge and by the automatically expanding movement which they have, as they are screwed onto the pipe, and which renders it possible, with such short edges, to produce threads having the taper essential for making tight joints. No leader screw is necessary. A wide range of diameters is covered by one set of dies, a single set being used for 1, 1¼, 1½ and 2-inch pipe, avoiding changing and care of additional parts. As soon as dies have been screwed onto pipe far enough to make a complete thread, they stop cutting and release themselves automatically, permitting immediate removal from the work.

Enterprise Improved Ratchet Die Stock and Pipe Reamer

For Threading Pipe in Corners and Other Difficult Positions. Suitable for Bench Work as Well as All Outside Work.

Each stock has leader screw sleeve, insuring perfect threads, and chip channels which prevent clogging. Bushings with each stock and die frames with No. 1 & 2. A clearance of only 2 1/4 inches from center of pipe is required to operate.

Reamer is adjustable to ream any size pipe for which stock is adapted. Pipe can be reamed with die in or out of stock, before or after thread is cut, or while die is still on pipe and threads are being cut.

The Nye Solid Die Stock

These Die Stocks have automatic adjustable bushings which can be opened wide enough to clear a coupling, thereby making it possible to cut a close nipple. No separate bushings required.

The die plate is fastened on in such a way that it cannot become loose or opened while in operation, nor can it become separated from the body of the stock. All parts are permanently fastened and cannot be lost.

Has large openings for escapement of chips and oil.

No. 1. Size of Block $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{3}{4}$ inch. Price each.....\$4.00
No. 2. Size of Block $4 \times 4 \times \frac{3}{4}$ inch. Price each.....6.00

The Nye Three Way Stock

This stock holds $\frac{1}{2}$, $\frac{3}{4}$ and 1-inch solid dies, size of block $2\frac{3}{4}$ inches square. The tool is a one piece casting, containing three die boxes and three bushings, all of which are parts of the one casting.

Each die is equally distant from the center, thus distributing the weight evenly. The bushings are tapped into the stock body immediately opposite each die and corresponding in size to that die. There is nothing loose about this stock that can be lost, no separate parts are necessary. The dies are locked in each box, and there remain until they are worn out. A close nipple can be cut if desired. A reducer bushing can be used, allowing the use of a $\frac{3}{8}$ -inch die if desired.

Price complete without dies.....\$5.50

Nye "Skip Tooth" Dies

These dies are manufactured under the Nye Patent known to the trade as "intercepted thread" or "skip tooth" dies. They are made with a full set of teeth in pitch line in front, back of which every alternate tooth is removed on each chaser in such a way that the teeth on one chaser are staggered in relation to the teeth on the opposite chaser.

The removal of these back teeth reduces the friction in threading more than 70 per cent over the ordinary

thread cutting tool. It will also be noticed from the sketch shown above that the cutting teeth are not straight, but set at a decided angle, another important feature which makes thread cutting easy. One man can thread any 2-inch pipe with a Nye Die. They will operate successfully either on steel or wrought iron pipe.

The steel used in Nye Dies is an oil hardened Vanadium-Chrome Tungsten tool steel which is semi-high speed in character. Careful attention is given in the manufacture to the question of rake, throat angle, chaser angle, clearance, etc.

Channon Special Pipe Cutting and Threading Outfits

For All Size Pipe from $\frac{1}{8}$ to 2 Inches

The tools which comprise these outfits are of standard make and first quality; and are not the inferior competitive tools often found in assortments.

The Vise is strong and well made, self locking, and is reversible.

The Dies in the Armstrong Adjustable Stock and Die Set are easily adjusted to over and under-size cutting. Each set is finely finished and packed in a box.

Three Wheel Pipe Cutters are made of malleable iron, pins and cutting wheels of oil tempered crucible steel.

Channon's Stocks and Dies are described fully on another page.

Gumbo Pipe Cement is a substitute for red and white lead, being convenient in form and very economical in use.

The burring reamer is used to take out the burr made when cutting pipe and allows the use of the full capacity of the pipe.

Outfit No. 1. A reliable outfit of first class tools. Low only in price:

- 1 No. 1 Channon Stock and Dies for $\frac{1}{4}$ to 1-inch pipe
- 1 No. 0 Pipe Vise for $\frac{1}{4}$ to 2-inch pipe
- 1 14-inch Stillson or Trimo Pipe Wrench
- 1 3-wheel Pipe Cutter for $\frac{1}{8}$ to 1-inch pipe
- 1 No. 2 Burring Reamer for 1-inch pipe and smaller
- 1 Copperized Oil Can
- 1 Can Gumbo Pipe Cement.

Complete as above described. No. 1 Outfit..... \$16.00

Outfit No. 2, a medium outfit with a wider range than No. 1:

- 1 No. 2 Channon Special Stock and Dies for $\frac{1}{8}$ to 2-inch pipe
- 1 No. 1 Pipe Vise for $\frac{1}{8}$ to 2 $\frac{1}{2}$ -inch pipe.
- 1 10-inch Stillson or Trimo Pipe Wrench for $\frac{1}{8}$ to 1-inch pipe
- 1 18-inch Stillson or Trimo Pipe Wrench for $\frac{1}{8}$ to 2-inch pipe
- 1 3-wheel Pipe Cutter for 2-inch pipe and smaller
- 1 Copperized Oil Can
- 1 Can Gumbo Pipe Cement

Complete as above described. No. 2 Outfit..... \$32.00

Outfit No. 3 for skilled mechanics desiring a first class outfit:

- 1 No. 2 set Armstrong Adjustable Stock and Dies for $\frac{1}{4}$ to 1-inch pipe
- 1 No. 3 set Armstrong Adjustable Stock and Dies for $1\frac{1}{4}$ to 2-inch pipe
- 1 No. 1 Pipe Vise for $\frac{1}{8}$ to 2 $\frac{1}{2}$ -inch pipe
- 1 3-wheel Pipe Cutter for 2-inch pipe and smaller
- 1 10-inch Stillson or Trimo Pipe Wrench for $\frac{1}{8}$ to 1-inch pipe
- 1 18-inch Stillson or Trimo Pipe Wrench for $\frac{1}{8}$ to 2-inch pipe
- 1 12-inch Knife Handle Monkey Wrench (not illustrated)
- 1 No. 2S Bit Brace Burring Reamer for $1\frac{1}{4}$ to 2-inch pipe
- 1 Copperized Oil Can
- 1 Can Gumbo Pipe Cement

Complete as described above. No. 3 Outfit..... \$38.50

H. Channon Company Chicago

Genuine Armstrong Adjustable Stocks and Dies

Complete Pipe Threading Outfit

Detail View of Stock Showing Adjustable Construction and Double End Dies.

Dies can be adjusted to the variations in the size of fittings and can be ground without drawing the temper. Both stock and dies have a small mark, and when both are brought into line the dies will cut standard size.

The Bard Adjustable Bushing

This Bushing is fitted with hardened jaws, which are moved to and from center by means of a cam plate, and, by fastening the plate with the thumb screw, the jaws are firmly held in any desired position. The adjustable jaws make a perfect center for the pipe fit closely around the pipe and insure the cutting of a straight thread. When necessary, a crooked or drunken thread can be cut with this bushing as easily as with a ring bushing. When once attached to the die stock it will always remain there. It does away with the necessity of carrying a number of loose ring bushings, and saves the time now lost in hunting for and changing the bushing for each size of pipe. This bushing only furnished with genuine Armstrong Stocks.

Model B Ratchet Attachment

This cut shows our new Model B Armstrong Ratchet Attachment. It is so constructed that only a small amount of energy is required to operate it. Can be used either right or left by reversing pawl without removing from stock. With this attachment any Armstrong Stock becomes a ratchet stock and die. It is not necessary to ratchet the die off the pipe. All that it requires is to make one or two turns back, when the pawl can be disengaged by lifting and making one-quarter turn of pawl, then turning the stock and the ratchet remains idle. This tool is made of malleable iron and is dust and chip proof. All parts interchangeable.

No. O Armstrong Machine

A light, strong, compact and durable machine threading pipe from $\frac{1}{4}$ to 2 inches and bolts from $\frac{1}{4}$ to $1\frac{1}{2}$ inch, using Armstrong Adjustable Dies. Dies are opened after cutting thread and after removing pipe, return to size without resetting.

It is provided with two speeds when used for hand; the operator can cut small pipe from $\frac{1}{4}$ to 1 inch very rapidly, avoiding the necessity of turning a great number of times, and by changing handle to other spindle cut $1\frac{1}{4}$ to 2 inches, not so quickly but as easily as on small pipe.

The machine can be quickly changed from hand to power, by the addition of the power attachment and countershaft. When ordering this machine for power, please state whether countershaft is wanted or not, as countershaft is furnished when not otherwise ordered. Weight of Machine and Dies 170 lbs. Weight of Stand 75 lbs. Weight of Power Attachment 30 lbs. Weight of Countershaft 100 lbs.

Unless otherwise specified this machine is shipped with Stand and Pipe Dies $\frac{1}{4}$ to 2 in. R. H. for Hand power.

No. O Hand Machine, with Stand, Pipe Dies

Stand, Price.....	10.00

Dies

The Dies used in this machine are the same as used in the No. 2 and No. 3 Stock, viz: $\frac{1}{4}$ to 1 inch No. 2, $1\frac{1}{4}$ to 2 inch No. 3, for Pipe.

Bolt Dies for this machine same as the No. 2 and No. 3 Stock, viz: $\frac{1}{4}$ to $1\frac{1}{4}$ inch No. 2, $1\frac{1}{4}$ to $1\frac{1}{2}$ inch No. 3.

No. OO Armstrong Machine

This machine is like the No. O in general construction; is portable, strong, durable, and fast; can be used for either hand or power, and changes from one to the other are easily and quickly made. It takes Pipe Dies from 1 inch to 4 inches inclusive, which are quick opening and adjustable. The cutting-off attachment is absolutely automatic, and of great practical use. The parts are all interchangeable and numbered. All moving parts of the machine run in oil, in covered chambers, keeping them free from dust and chips. Die head will not wear loose and does not revolve on gear teeth.

Countershaft 300 R. P. M. Weight of Hand Machine with Dies, Boxed, 475 lbs. Power Machine with Dies, Boxed, 580 lbs. Stand, 198 lbs. Power Attachment, 120 lbs. Countershaft 206 lbs.

When ordering this machine with power, state whether countershaft is wanted or not, as countershaft is always furnished except when otherwise ordered.

The Dies used in this machine are the same as used in the No. 3 and No. 6 Stock, viz: 1 to 2 inch. No. 3, $2\frac{1}{2}$ and 3 inch. No. 6, $3\frac{1}{2}$ and 4 inch are special dies for this machine. Bolt Dies same as used in No. 3 Stock from $\frac{1}{4}$ to 2 inch.

The Armstrong Ratchet Ceiling Nipple Threader

Made to thread pipe projecting a short distance from the ceiling or wall. Fitted with two dies, one on each end of holder for each size of pipe and bushings to match to insure straight threads. Provided

with a ratchet so that a close thread can be cut without marring the ceiling or wall. Holder will take the following, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$ inch, right or left. Regular standard dies will be furnished in place of the over-size if so desired.

Price complete with 6 dies and 6 bushings.....	\$13.00
Price complete with 3 dies and 3 bushings.....	8.50
Extra dies, price each.....	1.50

"Oster" Power Pipe and Nipple Threading Machines and Bolt Cutters

No. 304 A Belted Machine

No. 306 B Motor Driven

Will handle all of the many pipe threading jobs in ordinary use—pieces long or short, straight or bent, over or under size, nipples any length and all thread nipples.

Every operating part is right under the hand, so that not a moment is wasted in useless action of the operator. Without changing his position, he sees the work of the threading dies at all times. A good thread can be cut without effort and the work can be changed quickly. Quick results are given by the lever controlled die head which is released and reset instantly after the thread is finished. The Vise grips the work by a single turn of the wheel, bringing it to an absolute center. All bearings are large and the vise has no chance of getting out of alignment with the center of the dies. The machines are back geared so they can be driven with the least power and can be connected with the shortest possible belts where the space is limited.

The best point in favor of these machines is the fact that they can be used for threading shorter pieces than can be handled in the ordinary pipe machine. With the No. 300A you can thread pieces as short as three and one-half inches without the use of any extra jaws or holders. The No. 304A

will thread a piece as short as four and one-half inches; the No. 306A as short as five and one-half inches. All of these machines will handle thread to thread nipples by means of the nipple holders.

An Automatic Die Release can be added to these machines, designed for cutting all threads equal length. It is recommended where a number of pieces of the same length must be threaded. When adjusted it will automatically open the dies and remove the work from the dies without any attention on the part of the operator. It can be set to cut any length thread desired.

The Automatic Oil Pump is shown in the above cut. It is out of the way of the operator. It is geared direct to the machine and runs constantly while the machine is in operation, thus insuring a constant and steady flow of oil to the dies all the time. The small valve on the vertical pipe to the left of the machine is used for regulating the flow of oil to suit all conditions.

Oster Nipple Jaws—With this attachment on the Nos. 300A, 304A and 306A machines close nipples can be cut. The nipple jaws are attached to the vise jaws and expand with them by means of the hand wheel. They will hold thread to thread nipples except the largest size within the range of the machine. One set will hold one size nipple only.

No. 306A—Add for 1 inch dies and jaws, \$15.00 extra; for 1 1/2, 3/4 and 1 inch dies and jaws, \$20.00 extra.

The Forbes Pipe Cutting and Threading Machines

For Hand or Power

With one of the larger portable hand machines, one man can cut off and thread pipe up to 15 inches diameter without assistance, while with the smaller sizes of machine a boy can thread two and three inch pipe with only one hand on the crank.

No. 56 Hand Machine

The machines are equipped with a specially designed Die Head, which does away with all thumb screws for adjusting the dies, which are now clamped with one movement of a lever; they have self centering vise. Dies are quick opening and adjustable to any variation of fittings, have adjustable shell to take up the wear, which greatly prolongs the life of the machine.

In operating these machines, the pipe stands absolutely still, having neither rotary or lengthwise motion, a great advantage in handling long and heavy lengths of pipe. Can be operated in a trench or on a scaffold.

7	8 to 18	36.00				5 x 12	16000	138.00	375

Dies. Nos. 1, 1½ and 2 machines are furnished with four sets of right hand pipe dies of four pieces to set. These four sets cut all sizes of pipe of rated capacity of machine, except No. 1 speed gear machine which requires but three sets; one set cuts from one to two inches, inclusive.

No. 3 machine has five sets and No. 4 machine six sets of six pieces to the set. Nos. 4½ and 5 machines have eight sets of eight pieces to the set, and Nos. 6 and 7 have eight sets of twelve pieces to the set. Below six inches each set cuts two sizes of pipe as follows: ½-inch and ¾-inch; ¾-inch and 1-inch; 1-inch and 1¼-inch; 1½-inch and 2-inch; 2½-inch and 3-inch; 3½-inch and 4-inch; 4½-inch and 5-inch.

Bolt dies require a set for each size of bolt except sizes having the same number of threads to inch.

Orders for bolt dies must state whether threads are V, or U. S. Standard.

Orders for casing dies must give outside diameter and number of threads to inch.

Old dies can be retempered and recut for one-half the price of new dies.

The prices for flange gripping chucks are for special 3-jaw independent chucks put on rear end of spindle for gripping flanges and screwing up fittings. Nos. 6 and 7 are equipped with rear chucks without extra charge.

Beaver Square-End Pipe Cutters

The "Burrless" Cutter for Pipe and Conduit

Quicker than
Other Methods

Leaves an Absolutely Square-end. No Reaming Necessary

No ragged burrs on the inside of the pipe—no rough ridge on the outside. Reaming and filing are not necessary. The "Beaver" cannot split the pipe at the weld because the narrow, sharp knives cut out a thin shaving of metal until the pipe is severed. No strain on the pipe. It will cut steel, wrought-iron or brass pipe to exact lengths within 1-64 of an inch. The "Beaver" cutting principle consists of two narrow tool steel knives with guards to prevent breakage.

When the Cutter is centered or set, the powerful coil springs, which back the knives, are compressed, thus holding the knives against the pipe. The tool is revolved like a Die Stock and the knives cut out a thin shaving of metal until the pipe is severed.

The adjustment of the knives is entirely automatic and Fool proof.

"Toledo" Pipe Cutter No. 250

Capacity 2 1/2-inch to 6-inch pipe, inclusive

Complete with Ratchet Handle List Price \$80.00

The first **real** mechanism for cutting off relatively large pipe by hand. It is operated with a ratchet handle which drives the pinion and gear. It has four cutting knives automatically operated by star wheel feed. It makes a clean, straight cut, leaving no burr. It is very accurate and rapid, and will cut off extra heavy or **double** extra heavy pipe, just as well as standard thickness. As it splits in two in the middle, it may be used on pipe already installed or which may have fittings on both ends.

Strickler Ratchet Pipe Cutter

Used by leading water works, gas companies, railroads, mines, municipal heating and plumbing contractors and engineers. Automatically cuts cast iron, steel and wrought iron pipe, either in the trench or in the shop. The cutting blades make a channel cut around pipe, leaving no burrs or ragged edges. It is quickly placed on pipe and centered.

The ratchet head (which holds the handle) is equipped with dogs engaging the teeth on the body of the machine (which holds the

Star Fed Cutting Blade). As the machine rotates around the pipe, the Star Feeder automatically feeds the cutting blade; and this is done so rapidly and easily that one man can quickly cut eight-inch pipe and two men can cut sixteen and twenty-inch cast, wrought or steel pipe. Cuts all pipe from 3/4 inch to 30 inches in diameter, inclusive.

	Weight	Price Each
No. 1. Cuts 3/4 in. to 2 in., incl.,	10 lbs...	\$ 10.00

No. 8. Cuts 24 in. to 30 in., incl.,	300 lbs...	437.50

Knurled Cutter Wheels

The knurled cutter wheels actually remove metal in cutting, making a square cut. Made to fit all standard makes of pipe cutters, such as Barnes, Saunders and Trimco. The knurled cutter wheels act like a saw, for they do not simply spread the metal apart as ordinary wheel cutters do, but they make a square clean cut.

Made of Tungsten-Alloy tool steel, hardened and tempered in oil. Guaranteed to cut through pipe with fewer turns and less labor than any other type of cutter wheels on the market.

Barnes Three Wheel

Pipe Cutters

Saunders

Trimo

Armstrong

Three-wheel pipe cutters cut more rapidly than most other styles. They are indispensable shop tools and are especially adapted for cutting in corners and close quarters. The roller turns down burr made in cutting pipe and permits threading after cutting without much effort.

Barnes

Number	Capacity of Pipe, Inches	Price Each	Diameter of Wheels, Inches	Width of Wheels, Inches	Number	Price of Wheels, Each	Price of Pins, Each
0	$\frac{1}{8}$ to $\frac{3}{4}$	\$ 4.00	1 $\frac{1}{8}$	$\frac{3}{4}$	0	\$0.25	\$0.10

"Vosper" Pipe Cutter

It is just as simple as a pair of pipe tongs—more simple than some pipe tongs.

It will cut off a 2-inch pipe as easily and quickly as going through a 2-inch pipe board with a hand saw.

This cutter differs in every particular from previously existing pipe-cutting tools. The main frame of the tool consists of two arms hinged at the handle end and terminating at the other end in V-shaped bearings. The frame opens on its hinge and is put on the pipe and clamped there by means of an adjustable tie-bar and thumb-nut. Pivoted to the side of the main frame are two knife-carrying arms, an integral part of which are overhanging lugs to which are fastened heavy coil springs which actuate the feed of these knife-carrying arms. Heavy steel studs projecting through the ends of these knife-carrying arms hold the knives (which are circular in shape with a segment cut out to provide the cutting edge) and the steel "shoe" that rides ahead of each knife to regulate the depth of the cut. Eccentric levers pivoted on the knife-carrying arms in the proper place enable the operator to overcome the spring-tension and draw the knife-carrying arms back so the knives (or cutters) will clear the pipe when putting the tool on same. After the tool is fastened in the desired position on the pipe, the eccentric levers are turned over, allowing the knives to rest on the pipe; the tool is then rotated and the springs automatically feed the cutters until the pipe is cut off.

Capacity $\frac{1}{2}$ " to 2" Pipe.....List Price, \$16.00

Twist Drills

Speeds, Feed and How to Grind

No tool in the machine shop does as much work proportionately as a Twist Drill, and regardless of this fact it is generally the most abused tool in the plant.

It is just as necessary to have a Drill ground with a proper cutting edge as it is a razor or carpenter's edge tool. Therefore, to begin with, to secure the greatest efficiency and longest life of a Drill, it must be properly ground at the point. The cutting edges must be straight and of exactly the same length, as well as forming a proper and uniform angle with the axis of the Drill, which is 59° for general use. (Fig. A.)

The importance of lip clearance or backing off of the cutting edges should not be overlooked. 12° at the periphery (Fig. B.) is the best angle for ordinary shop work. This angle should be uniformly increased toward the center of the Drill, so that the line across the center shows an angle of about 125° to the cutting edges. (Fig. C.)

In drilling extremely hard material, where lighter feed is used, would suggest grinding the point to an angle of 68° (Fig. D), and the angle of lip clearance decreased to 9° at the periphery (Fig. E.)

Great care should be used in preserving the angle of the dead line between the cutting edges. This is an index to the clearance and if the Drill is ground without lip clearance it not only will not cut, but in nine out of ten times will split.

In grinding carbon Drills a rough, coarse stone should be used (we suggest about 46 grain, M Grade), either wet or dry. If dry, the Drill should not be held on the stone long enough to heat it to point of drawing the temper.

In grinding High Speed Drills a rough, coarse stone is best (we suggest about 46 grain, N. Grade) and should be used dry (never wet) and the Drill must not be submerged in water afterward. Care also should be used to not hold the Drill on wheel long enough to draw its temper.

After the Drill is correctly ground the next thing is its proper use. If carbon steel, a speed of 35 ft. per minute and feed of 1/16-inch per minute for a 1-inch Drill in mild steel and cast iron; in tool steel run 30% slower and in brass 75% faster. This may be varied according to hardness and density of metal to be drilled.

High Speed Drills should be run at two or three times the speed and feed of Carbon Drills.

The tables of Speeds and Feeds at the bottom of this page are based upon average Shop Working Conditions.

Many of our customers are greatly exceeding these rules and are securing more capacity from the use of our Carbon and High Speed Drills than shown in the tables. This, however, is due to their own local conditions.

"HERCULES" HIGH SPEED TWIST DRILLS

Taper Shank

Hercules Drills are made from a vanadium high speed steel and in the process of twisting while hot preserves the original grain of the steel. The result is a drill which cannot be excelled as to quality, strength, toughness and endurance. They are also milled and ground so as to drill accurately.

CARBON AND HIGH SPEED TWIST DRILLS

Taper Shank Twist Drills

No. 102
Carbon
SteelNo. 402
Diamond
High Speed

Our Carbon and Diamond High Speed Drills are made of the grades of steel selected by the manufacturers after exhaustive tests to determine the best material for the purpose. They are turned and milled from the solid bar and with the greatest care exercised in tempering and grinding, we recommend them to do more work with less grinding than any other make. We invite tests to prove their superiority.

We can furnish drills up to 4 inches in diameter upon request.

Approximate Weights of Taper Shank Drills

Size, inches	$\frac{1}{16}$	$\frac{3}{32}$	$\frac{1}{8}$	$\frac{5}{16}$	$\frac{3}{8}$	$\frac{7}{16}$	$\frac{1}{2}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	$1\frac{3}{4}$	2	$2\frac{1}{2}$	3	$3\frac{1}{2}$	4
Weights, pounds	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	1	$1\frac{1}{2}$	$2\frac{1}{4}$	$3\frac{1}{4}$	$5\frac{1}{4}$	$6\frac{1}{4}$	12	20	50

The above weights are for High Speed only. Carbon Steel Drills weigh about 20% less.

All sizes are carried in stock, up to and including 3 inches. Sixty-fourth sizes can also be furnished.

All orders filled with Carbon Steel Drills, unless High Speed are ordered.

CARBON AND HIGH SPEED TWIST DRILLS

Jobbers' Size Drills
Straight Shank Short LengthNo. 105
Carbon
SteelNo. 405
Diamond
High Speed

Jobbers Drills, both carbon and high speed, are milled from the solid bar. The sizes run from $\frac{1}{32}$ to $\frac{1}{2}$ -inch only and are used extensively for drilling through thin metals. Jobbers Drills are the most common drill on the market and more of them are used than any other. The Straight Shank Drills below, while a little higher in price, are longer and more suitable for deep drilling.

CARBON AND HIGH SPEED TWIST DRILLS

Wire Gauge Twist Drills

No. 107

Carbon
Steel

No. 407

Diamond
High Speed

Owing to the many different sizes of drills required for special purposes, these Wire Gauge Twist Drills are made in decimal sizes, representing 80 different sizes ranging between 13 and 228 thousandths of an inch. This practically eliminates the necessity of having special drills made.

TWIST DRILLS IN SETS

Carbon Twist Drill Sets

The sets marked mounted are furnished complete with hardwood stand, as illustrated. On all other sets the stand is not included.

Prices of Drills Per Set

- | | | |
|--------|------------------------------------------------------------------------------------------------------------|---------|
| No. 1. | Set of Taper Shank Drills $\frac{1}{4}$ to 1 inch, varying by 16ths. | \$20.00 |
| No. 2. | Set of Taper Shank Drills, $\frac{3}{8}$ to 1 $\frac{1}{4}$ inch, varying by 16ths. | 34.50 |
| No. 3. | Set of Taper Shank Drills, $\frac{1}{2}$ to $\frac{3}{4}$ inch by 32nds, $\frac{3}{4}$ to 1 inch by 16ths. | 42.00 |
| No. 5. | Set Jobbers, straight Shanks, $\frac{1}{8}$ to $\frac{1}{2}$ inch by 64ths, mounted. | 10.00 |
| No. 6. | Set Jobbers, Straight Shanks, $\frac{1}{8}$ to $\frac{1}{2}$ inch by 32nds, mounted. | 5.40 |
| No. 7. | Set Drills, from 60 to $\frac{3}{4}$ inch, mounted. | 9.90 |
| No. 8. | Set Drills, Steel Wire Gauge, from No. 1 to No. 60, mounted. | 8.10 |
| No. 9. | Half Set Drills, alternate Nos. from 1 to 59, mounted. | 4.30 |
| | Wood Block only, price each | 1.25 |

Channon Drill Stand

A Channon drill stand is a time saver as well as an absolute necessity. Much time can be saved which is otherwise spent uselessly looking for drills in drawers and boxes. It can easily be carried

from one place to another and the drills are always accessible. The handle can be unscrewed for convenience in packing. The numbers are large and black and are etched on an aluminum background. The stand is a drill gauge as well as a stand. The holes are so accurate that only the proper drills will fit, yet the drills cannot bind.

Beneath each drill number is given the decimal equivalent in inches of the drill. The bottom rows show drill sizes, suitable for different black enamel, polished

- | | | |
|-----------------|------------------------------------------------------------------------------------|---------|
| No. 11. | As illustrated with drills from 1 to 60,
consecutively..... | \$10.75 |
| No. 12. | Like illustration, but drills from $\frac{1}{8}$ to $\frac{1}{2}$
by 64ths..... | 12.50 |
| Stand only..... | | 2.80 |

Drill Sets with Metal Stands

The following sets are mounted on handsome metal stands, copperized finish. Each drill fits in a hole in the stand, of corresponding size. On a 5A stand, the 32nd sizes are on one side of the stand and the 64th sizes on the other. On the 8A stand the even numbers are on one side and the odd numbers on the other.

- | | | |
|----------------|--------------------------------------------------------------------------------------|---------|
| No. 5A. | Jobbers drills, $\frac{1}{8}$ to $\frac{1}{2}$ -inch by 64ths,
price per set..... | \$11.50 |
| No. 8A. | Wire drills, Nos. 1 to 60, inclusive.... | 9.75 |
| | Metal stands only, price per set..... | 2.50 |

Bit Stock Drill Sets

Packed in flat leatherette cases which fit the pocket and keep the drills in good condition. No. 13 Series are for metal working and No. 14 Series for wood boring. The latter will not, however, be injured by contact with nails or other hard substances. Both kinds of drills are sold separately and are listed on another page.

- | | | |

CARBON AND HIGH SPEED TWIST DRILLS

Regular Blacksmith's Drills— $\frac{1}{2}$ -Inch ShankNo. 112
Carbon
SteelNo. 412
Diamond
High Speed

Regular Blacksmiths' Drills are made with $\frac{1}{8}$ and $\frac{1}{4}$ -inch shanks. They are the most popular type of drill used and will fit any Blacksmiths' drill. The shanks are flattened on one side enabling the drill to be held firmly in chuck. Also used for drilling railroad track.

CARBON AND HIGH SPEED TWIST DRILLS

Taper Square Shank Ratchet and Track Drill

No. 109E Carbon Steel

No. 507 D'amond High Speed

These Taper Shank Drills are made with two sizes of shanks. Shank A $\frac{5}{8}$ -inch x $\frac{3}{4}$ -inch $1\frac{1}{2}$ inches long, is the most popular and fits all makes of ratchets. This size always sent unless otherwise ordered. Shank B, $\frac{3}{4}$ -inch x $\frac{1}{2}$ -inch, $1\frac{1}{4}$ inches long, used on large size ratchets only. On high speed over 1 inch, B Shank will be furnished.

Economy High Speed Track Bits

All $6\frac{1}{4}$ Inches Long

No. 504. Flat Beaded

Fitting Flat Drill Chucks on Paulus, New Style Paulus, Buda, Climax, Girder and Heavy Drill Machines.

Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. No. 1 Bead. Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. No. 2 Bead. Size given is for shank end of bit. Point end is $\frac{1}{2}$ -inch larger.

No. 505. Flat with Round Slabbed Shanks

Fitting Chucks on Paulus, Buda, Harvey, Francis Reed & Co.'s Nos. 18 and 19, Duntley and Sheffield Car Co.'s Track Drilling machines.

Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. Shanks on these bits are $2\frac{1}{4}$ inches long, .648 diameter, commonly called $\frac{5}{8}$ -inch. Size at point end is $\frac{1}{2}$ -inch larger than diameter of drills given.

No. 509. Flat with Combination Flat Beaded and Round Shank

This bit will fit all Chucks for track drilling machines listed under Nos. 504 and 505 bits above. Also for Rich Chucks.

Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. Thickness of bits $\frac{1}{2}$ -inch to $1\frac{1}{4}$ -inch is $\frac{3}{8}$ -inch. No. 2 Bead. Shanks on these bits are $2\frac{1}{4}$ inches long, .648 diameter, commonly called $\frac{5}{8}$ -inch. Size at point end is $\frac{1}{2}$ -inch larger than diameter of drills given.

COUNTERSINKS AND DRILLS

Drills and Countersinks in Sets

A machinist's tool chest equipment is not complete without a set of drills and countersinks. The set contains one each of No. A, B, C, D, EA, AA, F and G. These numbers cover the range of sizes found to be most in demand. Each set packed in a wooden box as shown. Weight of set 7 ounces.

Price per set, complete.....\$2.00

No. 114A Drill and Countersink Combined with Taper Shank

Size	Price Each	Diam. of Body, Inches	Diam. of Drill, Inches	Shank Taper	Length Over All, Inches	Length of Drill, Inches
P	\$0.75	$\frac{1}{8}$	$\frac{1}{8}$	No. 1	4 $\frac{1}{2}$	$\frac{1}{2}$
Q	.75	$\frac{1}{8}$	$\frac{1}{8}$	No. 1	4 $\frac{1}{2}$	$\frac{1}{2}$
R	.75	$\frac{1}{8}$	$\frac{1}{8}$	No. 1	4 $\frac{1}{2}$	$\frac{1}{2}$

	.75	$\frac{1}{8}$	$\frac{1}{8}$	No. 13	No. 1	4 $\frac{1}{2}$

The angle of Countersink is 60°. Special sizes and angles made to order.

Countersinks with Renewable Blades

Countersink with Bit Brace Shank

Renewable Blade

The holder or body part will last practically a lifetime. One No. 68 (or No. 680) countersink with the new double angle reversible blade (60°x80°) will countersink for both bolts and screw heads and take the place of 2 solid countersinks.

Each countersink is packed in an individual box. No. 68. Countersink with bit brace shank, weight each, 3 $\frac{1}{2}$ ounces. Price each.....\$1.00
No. 680. Countersink with $\frac{1}{2}$ inch diameter round shank, weight each, 3 $\frac{1}{2}$ ounces. Price each..... 1.00
Extra blades fitting both No. 68 and No. 680 countersinks, weight per dozen, 3 ounces. Price each. .40

No. 114 Drill and Countersink Combined

Center holes absolutely perfect.

"Use Em Up" Type

Sleeve Style

Will put into immediate use drills and reamers with tangs twisted off, by grinding flat surface on the remaining shank. No great accuracy required in doing this work and will give positive drive. Special tools can be made to fit these sockets without the expense of milling a tang.

Number 118A Roughing Reamers are made .010 inch smaller in diameter than Finishing Reamers.

CARBON AND HIGH SPEED REAMERS

Hand Reamers

Eccentric Flutes

No. 115
Carbon
SteelNo. 250
Diamond
High Speed

This type of hand reamer is the most popular and is used for very accurate work. On account of the square shank it can be used with reamer wrench. It will not chatter when in use. Hand reamers also furnished in 64 sizes in both carbon and Diamond High Speed steel.

Taper Shank Jobbers' Reamers

No. 116
Carbon
SteelNo. 251
Diamond
High Speed

Exactly the same as the above reamer except that it has a taper shank. This type is recommended where a large quantity of work is to be reamed. Can also be used in drill presses, etc.

CARBON AND HIGH SPEED REAMERS

Chucking Reamers—With Taper Shanks

Fluted—No. 120E Carbon Steel. No. 262 High Speed. Rose—No. 120G Carbon Steel. No. 264 Diamond High Speed

Fluted reamers are especially made for reaming for accurate work, while Rose Reamers are primarily for rough reaming but will ream fairly accurate. They are often preferred in place of hand reamers on account of the short flute and are much more efficient for shallow reaming.

Chucking Reamers—With Straight Shanks

Fluted—No. 120F Carbon Steel. No. 263 High Speed. Rose—120H Carbon Steel. No. 265 Diamond High Speed

These are the same as the above reamers except that they have straight shanks. The shanks are so ground that they will run true with the flutes when used in chucks.

CARBON AND HIGH SPEED REAMERS

W. & B. Shell Reamers

Fluted
No. 117. Carbon Steel.
No. 260. Diamond High Speed.

The Fluted type should be used when an accurately finished hole is required.

Rose

No. 117A. Carbon Steel.
No. 261. Diamond High Speed.

The Rose type is used for roughing, but will ream a fairly accurate hole.

"Diamond" Easy Starting Arbors are made with a nut and sliding collar, the nut being used to move the collar forward and start the reamer or shell tool from the arbor. It is not necessary to remove the arbor from the machine.

This device is a time saver and likewise prevents damaging the tools.

EXPANSION REAMERS

Diamond Expansion Reamers

Diamond Expansion Reamers are highly recommended where fine precision reaming is required. Adjustment can be made to less than one one-thousandth of an inch. Taper Shank Regular Reamers furnished up to 3 inches in diameter in 32nd and 64th sizes, both Carbon and Diamond High Speed steel.

Not guaranteed to give expansion greater than as follows: Sizes $\frac{1}{4}$ to $\frac{11}{16}$, .006 inch; $\frac{1}{2}$ to $\frac{11}{16}$, .010 inch; 1 to $\frac{11}{16}$, .012 inch; $1\frac{1}{4}$ to 3, .015 inch.

Critchley's Patent Expanding Reamer

Some Facts About the "Critchley"

Expands $\frac{1}{8}$ inch while others expand .005; easy adjustment; use any wrench; perfect alignment; no nut on end to interfere; one does the work of four; new blades can be had at small cost; blades can be reground many times; it is the only tool that will do what the repairman wants without his investing more than the value of the job.

No.	Diam. Inches	Expands to	Length Cutting, Inches	Full Length, Inches	Price Each

Auto Cylinder Reamer
For Ford and Dodge Cars

This is a shell reamer with taper slots and fitted with 8 semi-high speed steel cutters. As will be seen from illustration it is only necessary to loosen the top nut and screw on the lower one to make the reamer cut larger.

This reamer has an adjustment of $\frac{1}{8}$ inch. There is a shaft extending through the reamer more than the length of the cylinder; on this shaft is fitted a taper guide that fits in bottom end of cylinder to be reamed, thus insuring a straight hole.

This tool will ream a $3\frac{3}{4}$ -inch cylinder as smooth and clean as a gun barrel at a cost of labor that is astonishing to mechanic and car-owner, and any repairman is enabled to do as good work as the shop with boring mills and internal grinders. No complicated jigs are necessary to adjust or govern it. Two men on the ends of a 36 tap wrench will ream a 4-cylinder engine in 25 minutes. In other words it costs ten cents per cylinder to ream an engine.

Reamer in perpendicular position, never in a lathe. It may be used in a drill press, but the time necessary to attach a chuck really offsets the advantage.

We guarantee "no chattering or bucking"—consequently glass-smooth walls.

Rebored cylinders mean profitable work for the repairman and pleasurable driving for the car-owner.

Size $3\frac{3}{4}$ inches, adjustment $\frac{1}{8}$ inch. Price each, \$30.00

McCrosky Adjustable Reamers

We recommend these reamers on all machine work where extreme accuracy is required. They are also adapted for reaming automobile cylinders.

Construction

Blade is held rigid and drawn firmly down against seat by outside and inside collars. Adjusted by releasing rear collar and moving up front collar. Simple and rigid in construction with ample chip clearance. Standard size can be maintained through years of service. Blades easily renewed. A two-inch reamer gives about 3/8-inch expansion. Other sizes in proportion.

Old Style Reamers

Hand Reamer Fig. 4

Machine Reamer

Straight Shank Fig. 7—Taper Shank Fig. 7T

Made only in sizes up to 1 1/2 inches because in larger sizes the New Style Reamer is superior. The Old Style Reamer, however, gives better satisfaction in the smaller sizes.

Furnished regularly up to 6 inches by 16ths. Made to order up to 12 inches. Prices on application.

Arbors of Shell Reamers

Number of Arbor	Size of Reamer	Price		Length
		Straight Shank	Morse Taper	
30	2 to 2 1/4	\$2.45	\$3.70	12
31	2 1/4 to 2 1/2	2.55	3.80	13
20	2 1/2 to 2 3/4	2.65	3.90	14
21	2 3/4 to 2 5/8	2.80	4.05	14 1/2
22	3 to 3 1/8	3.60	4.95	15
23	3 1/8 to 3 1/2	4.15	5.60	15 1/2
24	3 1/2 to 3 3/4	5.27	6.72	16
25	3 3/4 to 4	6.35	7.83	16 1/2

In ordering give arbor number and state whether straight or Morse taper shank is desired.

Ideal Adjustable High Speed Machine Finishing Reamer

Only 2 parts including blades - Great strength - Large Adjustment.

Type No. 13

Type No. 14

The Ideal Reamer will ream the toughest, hardest and most fibrous metals with ease. It reams every hole true, smooth and round. It will not bind, heat up or clog up with chips. It will be found especially valuable for working on phosphor bronze, steel tubing, steel castings, steel forgings or aluminum.

A 2-inch Ideal Reamer will adjust $\frac{1}{8}$ -inch and other sizes in proportion. Thus one Ideal will outwear many solid reamers and even then it is only necessary to buy a new set of blades. Adjustment is effected by loosening rear collar and tightening front collar, which forces the two halves of reamer head up the inclined surfaces of the arbor.

In ordering Type 14 Reamer, state which size Morse Taper Shank is desired. Intermediate sizes furnished at price of next larger size. Sizes larger than 3-inch made to order. New blades of any size cost one-half the price of the Type 14 Reamer of same size.

Taper Bridge Reamers

With Taper Shank

No. 120L Carbon Steel. No. 268 "Diamond" High Speed

Used in electric and air drilling devices by boilermakers, structural iron, bridge and shipbuilders for reaming out holes for rivets, bolts, rods, etc.

Reamers from 1/4-inch to 1 1/4-inch have five flutes; 1 1/2 to 1 3/4-inch have six flutes.

The 1 1/4-inch Carbon Steel is furnished regularly with either No. 3 or No. 4 Taper Shank. No. 3 Taper Shank will be furnished unless otherwise specified.

Taper Bridge Reamers

With Square Shanks

Bit Stock Taper
Reamers in Sets

For the convenience of the trade we furnish "Diamond" Bit Stock Taper Reamers packed in sets.

Set No. 50. Contains one each $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, $\frac{15}{16}$, and $\frac{1}{2}$ inch. Price per set, \$6.75

Set No. 50A. Contains one each $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, $\frac{15}{16}$, and $\frac{1}{2}$ inch. Price per set, \$2.80

Set No. 51. Same as No. 50 except packed in a hardwood case as illustrated. Price per set, \$7.00

Three Groove Chucking
Reamers

No. 120K Carbon Steel. No. 266 "Diamond" High Speed

Especially designed for enlarging cored or drilled holes and, being ground to size on centers, need not be followed by a finishing reamer unless extreme accuracy is required

Thirty-second and sixty-fourth sizes can be furnished. Can furnish these reamers with straight shanks; also four groove chucking reamers with taper and straight shanks.

Burring Reamers or Tools

Style of
Nos.

1-2-2 1/2-5-4

Style of Nos.
5 and 6

For burring gas, steam and electric conduit pipes, etc. All pipes should be burred to insure full capacity.

No.	Price Each	Length, inches	Length of Flute, inches	Size at Point, inches	Size at Large End, in.	Capacity of Pipe, inches
1	\$1.20	3	1 1/2	3/8	1 1/2	3/8 to 1 1/2
2	1.40	3 1/2	1 3/4	3/8	1 3/4	3/8 to 1 3/4

4	3.60	5 1/2	2 3/4	3/8	2 3/4	3/8 to 2 3/4
5	4.20	4 1/2	2 1/2	3/8	1	1 to 2
6	4.80	5 1/2	3	3/8	2 1/2	1 1/2 to 2

*With 1/2-inch Round Shank.

Plain and Ratchet Pipe Reamers

Capacity 3/8 to 3-inch pipe.

This type of Pipe Reamer is preferred by many steamfitters and mechanics. The ratchet feature is very convenient when working in cramped places and corners.

No. 10P. Plain pattern, price each.....\$6.50

No. 20R. Ratchet pattern, price each.....\$6.00

Bit Brace Countersinks

For countersinking wood and machine screws, stove and tire bolts. Use 82° for countersinking for wood and machine screws and stove bolts. 54° for tire bolts.

Center Reamers No. 120M

Style A

60° Angle

Style B

Packed: Sizes 1/8 to 3/8-inch, one dozen; 1/2, 5/8 and 3/4-inch, one-half dozen of a size in a wood box.

Counter Bores

A new design of the best quality steel for setting the heads of Fillister Head Screws

Machine Screw sizes Nos. 4, 6, 8, 10, 12 and 14, price each.....\$1.00

Diameter of Screw	Diameter of Head	Price Each
1/8	3/8	\$1.00
3/8	1/2	1.10
1/2	3/4	1.20
5/8	1 1/4	1.40
3/4	1 1/2	1.60

Armstrong Automatic Drill Drift

The handle or driver is always ready to strike a blow as the spring automatically throws it back in position. It can be operated with one hand, leaving the other to hold the drill, thus preventing the tool from falling upon the work below.

The Advantages of Coarse Tooth Milling Cutters

Furnished in High Speed Steel Only

In the development of coarse tooth milling cutters the aim has been to obtain the freest possible cutting action without impairing the accuracy of the surface produced. The new cutters with wide spaced teeth have a marked advantage, on many classes of work, over the usual types, being capable of removing a considerable greater quantity of metal in a given time, without distressing the cutter or overloading the machine.

The free cutting action of coarse tooth cutters is largely due to the fact that less cutting is actually required to remove a given amount of metal, each tooth taking a large deep chip. This results in a considerable decrease in the tendency to slide over the surface and spring the cutter arbor. The rake and increased spiral of the teeth give a more nearly perfect shearing, rather than a pushing or a dragging action. Accordingly there is less friction generated for a given cut, leaving the teeth much cooler and causing them to do much more work between grindings.

The wide spaces between the teeth allow the cutting edges to be well backed up, which was not always possible with closely spaced teeth. This increase in the strength of the teeth is much greater in proportion than the increase in work done by each tooth in removing the larger chips. Therefore the cutters are well prepared to handle deep and rapid cuts without danger of failing.

The main advantage of coarse tooth milling cutters may be stated as increased production and decreased power consumption due to the heavier cuts taken and the freer cutting action. Of course, the amount of improvement in these points differs greatly in various instances owing to the conditions, such as the stiffness of the work, nature of the cut, strength of the machine, etc.

In developing our line of milling cutters, the manufacturer has paid particular attention to the angle of rake and the lead of the spiral of the teeth. After a long series of practical experiments the present type, with steep spiral and considerable angle of rake has been adopted as the most economical and practical form.

Face Milling Cutters

With Inserted Teeth

This form of cutter is especially adapted for all classes of face milling. Body is machinery steel, provided with a taper hole and keyway, held firmly in place on arbor by a screw. Teeth are held in place by taper bushings and screws are easily adjusted or removed. Bushings, screws and teeth are interchangeable.

High speed cutters furnished unless otherwise ordered.

Left Hand Cutter

furnished unless otherwise ordered.

No. of Mill With High Speed Blades, Price per Cutter	With Carbon Steel Blades, Price per Cutter	Size inches	Face A inches	Face B inches	No. of Taper Hole	No. of Arbor on which Cutter can be used

*1 1/4 inch, 1 inch and 2 inches. For all Gear Cutters of these diameters, use 3/8, 3/4, and 1/2 inch keys, respectively.

Gear Cutters with 1 1/4 inch hole also furnished with 3/8 inch keyway.

Inserted Tooth Face Milling Cutters

This face milling cutter embodies new and important features never before used in cutters of this type. Cutters may be quickly released from spindle, and the same cutter may be used on machines of different sizes of spindles by using special sleeves.

Cutter is made with a taper hole to fit a steel split sleeve that is screwed on spindle. Cutter is keyed to sleeve and drawn on taper of sleeve by a drawing-in bolt. As bolt is tightened sleeve contracts and grips spindle, thus furnishing full efficiency of drive to cutter at all times. Cutter is held close to spindle shoulder, increasing the working space.

Body, machinery steel. Blades, high speed steel.

All saws thinner than No. 19 gauge are same price as No. 19.

Screw Slotting Cutters

These Cutters have a fine pitch of teeth especially adapted for the slotting of screw heads and similar work.

They are not ground on the sides. 2 3/4-in. diam. by 1-in. hole seen on sizes shown except when otherwise specified.

Trade No.	Price Each	Diam. of Screw Head to be Slotted, Ins.	Gauge No.	Thickness of Cutter in Decimals	Diam. of Cutter Inches	Size of Hole, Inches

Cutters varying from the list are made to order.

Formed Saws for Slitting Copper

Designed especially for slitting or sawing of metals that are of a soft or tenacious character.

The teeth are backed off and formed the same as in all milling cutters, sharpened by grinding the face, thus retaining the outline of the saw. Each alternate tooth is V shaped and, as the others are flat, the chip is split and forced out sideways, having less tendency to clog than where the ordinary saw is employed. The sides of these saws are ground concave for clearance.

Made to order of any desired size. Prices on application.

Coarse Tooth Spiral End Mills—High Speed

In Ordering, State Whether Right or Left Hand Mills Are Wanted

Straight Shank End Mills

These end mills are to be used with spring collets. The diameter of the shank is the same as the cut. All mills less than 3/8 diameter have straight teeth. In ordering state whether right or left hand mills are wanted.

Diameter	Length of Cut, Inches	Whole Length, Inches	Carbon Steel Cutters, Price Each	High Speed Cutters, Price Each

End Mills with Center Cut

Always state whether Right or Left Hand Mills are wanted.

End mills are useful where it is desired to cut into work with end of mill and then move along, as in cams, grooves, etc., as the teeth are sharp on inside, and cut a path out from first entering point. Are also useful in taking heavy cuts, especially in cast iron.

Can be furnished with Morse Taper at regular Morse Taper price.

No. 5 Taper fits C, D and K Collets; No. 7, KK and E Collets; No. 9, F, G, H, O, SS and T Collets.

Slotting End Mills "Two Lipped" High Speed Steel

For rapidly milling slots in steel and iron from the solid, instead of drilling a series of holes and making several cuts in milling slot. Best results are obtained by maintaining a high surface speed. Depth of cut equal to one-half diameter of mill can usually be taken from solid stock.

Standard "T" Slot Cutters

Always state whether Right or Left Hand Cutters are wanted. Cutters are made 1/2" larger in diameter and 1/8" greater in thickness than figures given, to allow for sharpening.

Other sizes made to order.

These cutters are of special design and can be sharpened when dull by grinding the faces of the teeth. This manner of sharpening will not alter the form of the tooth which the cutter makes. This feature makes them much more economical than ordinary cutters used for the same purpose.

Orders should be given by following tables, stating number of cutter and Diametral Pitch required. By Diametral Pitch is meant number of teeth per inch in diameter on pitch circle of any wheel. In ordering cutters for worm wheels, give number of teeth in wheel, diameter of worm and number of threads per inch.

Special attention is called to center line on gear cutters, which is convenient in setting cutters central with work spindle. All gears of same pitch cut with these cutters are interchangeable.

Eight cutters are regularly made for each pitch as follows:

- | | |
|-----------------------------------------------|--------------------------------------------|
| No. 1 will cut wheels from 135 teeth to rack. | No. 5 will cut wheels from 21 to 25 teeth. |
| No. 2 will cut wheels from 55 to 134 teeth. | No. 6 will cut wheels from 17 to 20 teeth. |
| No. 3 will cut wheels from 35 to 54 teeth. | No. 7 will cut wheels from 14 to 16 teeth. |
| No. 4 will cut wheels from 26 to 34 teeth. | No. 8 will cut wheels from 12 to 13 teeth. |

We furnish to order gear cutters from 2 to 8 pitch, inclusive, of half numbers, to accommodate those who require a finer division of number of teeth to be cut with each cutter than can be cut with the regular number.

The half numbers are as follows:

- | | | | | | | | |
|--------------------|-----------|----------|----------|----------|----------|----------|----|
| No. of Cutter..... | 1½ | 2½ | 3½ | 4½ | 5½ | 6½ | 7½ |
| Range, teeth..... | 80 to 134 | 42 to 54 | 30 to 34 | 23 to 25 | 19 to 20 | 15 to 16 | 13 |

24	3.45	2.35	2 1/4	2 1/4	7/8

Cutters marked * are not kept in stock but are made to order.

Eight cutters made for each pitch. Three pitch and coarser made in cast iron, and four pitch and coarser in steel, require two cuts to insure accuracy.

Cutters for Mitre and Bevel Gears

Diam- etral Pitch	PRICE EACH		Diam. Carbon Steel Cutter inches	Diam. High Speed Cutter inches	Size of Hole inches
	High Speed	Carbon Steel			
3	\$15.00	\$7.50	4	4	1 1/4

12	4.25	3.10	2 1/8	2 1/4	1 1/4
14	3.75	2.70	2	2 1/4	1 1/4
16	3.50	2.50	2	2 1/4	1 1/4
20	3.30	2.30	1 3/4	2	1 1/4
24	3.10	2.10	1 3/4	1 3/4	1 1/4

Cutters for pitches not given in the above list will be made to order.

These cutters are thin enough to cut any bevel gear whose tooth face is not longer than one-third distance from its outer end to point where shaft centre lines meet. This makes tooth thickness at inner end not less than two-thirds that at outer end.

In ordering cutters for bevel gears, if number of teeth in each gear, pitch and length of face are given, also angle of shafts, if different from a right angle, we can select proper cutter to send.

When extra length of face is wanted, requiring an especially thin cutter, length should be specified in order.

Eight cutters are made for each pitch and numbered from 1 to 8.

Improved Stocking Cutter for Involute Gears

These cutters are used for roughing or cutting away surplus stock, leaving the regular gear cutter to finish the work. Heavy cuts at fast speed and coarse feeds can be taken because of the easier cutting action. Greater part of cutting is done by plain teeth. Stepped teeth project beyond outline of plain teeth only enough to break up the chips.

Angular Cutters

We keep in stock Angular Cutters of 45°, 50°, 60°, 70° and 80° angle, both right and left hand, suitable for cutting the teeth of cutters and mills.

Always state degree wanted, and whether right or left hand.

Number	Price Each		Diameter, Inches	Thickness, Inches	Hole, Inches
	High Speed	Carbon			
J-10	\$4.10	\$2.65	2 1/2	1/2	3/8
J-11	4.45	2.80	3 1/4	1/2	1
J-12	5.40	3.35	3	1/2	1 1/4
J-13	6.15	3.75	3 1/4	1/2	1 1/2

Angular Cutters with Threaded Holes

Cutters are 60° angle and are made right and left hand.

No.	High Speed Steel Cutters, Price Each	Carbon Steel Cutters, Price Each	Diameter, Inches	Thickness, Inches	Hole, Inches	Thread
J-25	\$3.15	\$2.25	1 1/4	7/16	3/8	20 L
J-26	3.50	2.50	1 1/4	7/16	1/2	16 L

Double Angle Cutters

We carry in stock cutters of 45°, 60° or 90° included angle.

No.	Price Each		Diameter, Inches	Thickness, Inches	Hole, Inches
	High Speed	Carbon			
J-100	\$4.10	\$2.65	2 1/2	1/2	3/8
J-101	4.45	2.80	3 1/4	1/2	1
J-102	5.40	3.35	3	1/2	1 1/4

Cutters for Spiral Mills

These cutters are especially adapted to the cutting of spiral mills, either 40°, 48° or 53° angle on one side and 12° on the other.

The cut illustrates a right hand cutter at work, in the position required in cutting the teeth of a spiral cutter.

Right and left hand cutters carried in stock. In ordering specify what degree and whether Right or Left Hand.

No.	Price Each		Diameter, Inches	Thickness, Inches	Hole
	High Speed	Carbon			
J-150	\$4.10	\$2.65	2 1/2	1/2	3/8
J-151	4.45	2.80	3 1/4	1/2	1
J-152	5.40	3.35	3	1/2	1 1/4
*J-153	6.15	3.75	3 1/4	1/2	1 1/2

*Can be furnished 40° on one side and 12° on the other, or 53° on one side and 12° on the other.

Convex and Concave Cutters

For Milling Half Circles

These Cutters can be sharpened by grinding without changing their outline.

Convex

Concave

Always state whether convex or concave is wanted.

No.	Price Each		Price Each		Diam. of Circle, inches	Diam. of Cutter, inches	Size of Hole, in.
	Convex		Concave

Sprocket Wheel Cutters

For Block Center Chains

We carry in stock a form of Sprocket Wheel Cutter for the ordinary 1-inch pitch chain.

The cutters for the smaller sized wheels are for cutting a curved form of tooth, to prevent the chain from mounting the sprocket, while the cutters for the larger sized wheels make a straight sided tooth.

Cutters of special forms, or to cut two teeth at one time, are made to order.

No. of Teeth of Sprocket	High Speed		Carbon Steel		Diam. of Cutter, inches	Size of Hole, inches
	Price Single Cutter	Price Double Cutter	Price Single Cutter	Price Double Cutter

Slocumb Micrometers

Micrometer Caliper No. 26 one inch. English or Metric Measure

Detail of Friction Stop

Furnished with or without friction stop, also with friction thimble. Friction stop enables an accurate measurement to be made, and does not have the clicking action of other ratchet stop micrometer. Friction thimble is made similarly to the friction stop but has a sleeve under thimble which slips when more than a certain pressure is applied. The friction thimble extends from end of barrel to white line. Frame is made of I section drop forged tool steel, giving strength and rigidity. Measures all sizes up to 1 inch by thousandths.

No. 26P—Without Friction Stop. Price Each. \$5.00

No. 26F—With Friction Stop. Price Each. \$5.50

No. 26T—With Friction Thimble. Price Each. \$6.00

Graduated to read to 10,000ths, extra. 1.00

Micrometer Caliper No. 25 Pattern

English or Metric Measure

Frame is I section drop forged tool steel, finished in black enamel. Decimal equivalents stamped on thimble. Measures all sizes by 1/1000 of an inch.

All sizes of No. 26 or 25 micrometers can be furnished in the Metric Measure at the same price.

Morocco Cases

For Micrometers

These cases are covered with genuine Morocco leather and lined with velvet.

No. 61 for 1 inch Micrometers. Price each. \$0.75

No. 62 for 2 inch Micrometers. Price each. 1.00

No. 63 for 3 inch Micrometers. Price each. 1.00

No. 64 for 4 inch Caliper. Price each. 1.75

Micrometer Sets

English or Metric Measure

No. 21. Range 0 to 3 Inches

Set consists of 3 Micrometers. No. 25 Pattern, ranging from 0 to 3 inch, graduated to read to thousandths of an inch. Case is velvet lined, morocco covered, dimensions 9 1/2 x 6 3/4 x 1 1/2 inches.

Also furnished in the Metric to measure from 0 to 75 millimeters by hundredths of a millimeter.

Price each, without friction stops. \$14.30

Price each, with friction stops. 15.80

Price of case only. 1.25

Graduated to read to 10,000ths, extra. 3.00

No. 19. Range 0 to 6 Inches

Set consists of 6 Micrometers, No. 25 Pattern, ranging from 0 to 6 inches, graduated to read to thousandths of an inch. Case is quartered oak, neatly finished and provided with lock and key. Size 14 1/4 x 5 1/4 x 7 inches. Micrometers are set with frames down, all being on an even plane at top.

Also furnished in the metric to measure from 0 to 150 millimeters by hundredths of a millimeter.

Price each, without friction stops. \$36.00

Price each, with friction stops. 39.00

Price of case only. 3.25

Graduated to read to 10,000ths of an inch. 6.00

Almond Micrometer

This micrometer is made by the manufacturers of the Almond Chuck. It is of correct design, well made and guaranteed accurate.

It is only furnished plain, having no ratchet stop or lock nut.

No. 140. For measurements by thousandths up to one inch. \$5.50

No. 140T. For measurements by ten thousandths 1/2 up to one inch. 6.50

Brown & Sharpe Tools

No. 5 Micrometer Caliper

English or Metric Measure. Range 0 to $\frac{1}{2}$ inch

Measures by thousandths of an inch. Outer end of frame is same size as measuring spindle and edges of measuring surfaces are left square. This tool

also made in the metric to measure all sizes less than 13 millimeters by hundredths of a millimeter, table of decimal equivalents being omitted. Provided with clamp ring, which clamps spindle and preserves setting.

Price each, regular\$4.50
Price each with ratchet stop 5.00
Price of Morocco Case65

No. 7 Micrometer Caliper

English Measure Only. Range 0 to $\frac{1}{2}$ inch

Differs from No. 5 only in being graduated to ten-thousandths, as well as thousandths of an inch.

Price each, regular\$6.00
Price each with ratchet stop 6.50
Price of Morocco Case65

No. 8 Micrometer Caliper

English or Metric Measure. Range 0 to 1 inch

Measures all sizes less than one inch by thousandths. Adjustment of measuring screw is made by an adjustable threaded nut which produces the necessary friction

by binding thread evenly on the angle. Provided with a Clamp Ring which clamps spindle and preserves the setting. Also made in the metric to measure all sizes less than 25 millimeters by hundredths of a millimeter; table of decimal equivalents being omitted.

Price each, regular\$6.00
Price each with ratchet stop 6.50
Price of Morocco Case65

No. 10 Micrometer Caliper

English Measure Only. Range 0 to 1 inch

Differs from No. 8 only in being graduated to read to ten thousandths of an inch by a vernier on front of barrel.

Price each, regular\$7.00
Price each with ratchet stop 7.50
Price of Morocco Case65

Micrometers always furnished without ratchet stop or case unless otherwise ordered.

Rex Micrometer Caliper

English or Metric Measure. Range 0 to 1 inch

Measure all sizes less than one inch by hundredths of a millimeter. Made to meet the demand for an inexpensive yet accurate measuring tool. Graduations on hub which run parallel to axis of screw run alternatively one above and one below measuring line; those above indicate 0, 50, 100, 150, etc., and those below, 25, 75, 125, etc. This important feature enables reading of caliper at a glance and eliminates to a certain extent errors likely to arise from reading close graduations too rapidly. Adjustments of measuring screw to compensate for wear is made by a taper nut.

This tool also made in the metric to measure all sizes less than 25 millimeters by hundredths of a millimeter.

Price each, regular\$4.00
Price each, with ratchet stop 4.50
Price of Morocco Case65

No. 17 Micrometer Caliper

English or Metric Measure. Range 0 to 1 inch

Measures all sizes less than one inch by thousandths of an inch. Provided with a clamp, with which measuring spindle can be held in any desired position.

Ends of measuring surface are beveled. Also made in the metric to measure all sizes less than 25 millimeters, by hundredths of a millimeter; table of decimal equivalents being omitted.

Price each, regular\$6.00
Price each, with ratchet stop 6.50
Price of Morocco Case65

Can furnish this caliper with a wooden handle attached to bow; handle being $2\frac{3}{4}$ in. long, 1 in. largest diameter. When so fitted, clamp screw is provided with rings instead of a knurled head.

Price each, extra\$1.50

No. 18 Micrometer Caliper

English Measure Only. Range 0 to 1 inch

Differs from No. 17 only in being graduated to read to ten thousandths as well as thousandths of an inch.

Price each, regular\$7.00
Price each, with ratchet stop 7.50
Price of Morocco Case65

Brown & Sharpe Tools

No. 19 Micrometer Caliper

English or Metric Measure. Range 0 to 1 inch

Measures all sizes less than one inch by thousandths of an inch. Outer end of frame is same size as measuring spindle, and edges of measuring surface are not beveled, but left square. Also made in the metric to measure all sizes less than 25 millimeters by hundredths of a millimeter; table of decimal equivalents being omitted.

Price each, regular\$5.50
Price each, with ratchet stop 6.00
Price of Morocco Case65

No. 20 Micrometer Caliper

This Caliper differs from Micrometer Caliper No. 19, English, only in being graduated to read ten-thousandths, as well as to thousandths, of an inch.

Price\$6.50
With ratchet stop 7.00
Morocco Case65

No. 45 Micrometer Caliper

English or Metric Measure. Range 0 to 2 inches

This caliper measures all sizes less than 2 inches by thousandths of an inch. Provided with a Clamp Ring which clamps spindle and preserves the setting. Also made in the metric to measure all sizes less than 50 millimeters by hundredths of a millimeter, table of decimal equivalents being omitted.

Price each, regular\$8.50
Price each with ratchet stop 9.00
Price of Morocco Case75

A standard gauge to be used in adjusting caliper is furnished with each tool.

No. 46 Micrometer Caliper

English Measure Only. Range 0 to 2 inches

This caliper differs from No. 45 only in being graduated to read ten thousandths, as well as thousandths of an inch.

Price each, regular\$ 9.50
Price each, with ratchet stop 10.00
Price of Morocco Case75

A standard gauge to be used in adjusting caliper is furnished with each tool.

No. 25 Micrometer Caliper

English Measure Only. Direct Reading. Range 0 to 1 inch

Thousandths of an inch may be read in exact figures, without calculating with the aid of graduation lines. Figures showing in opening nearest frame indicate tenths of an inch, those in next opening register hundredths, and in the other, thousandths. In addition, thimble on end of sleeve is graduated in connection with a line on sleeve to read thousandths. In this way, fractional parts of a thousandth may be estimated. Mechanism is constructed that dials are locked and micrometer cannot get out of adjustment and read incorrectly. Caliper may be adjusted for wear on anvil or for looseness in the thread.

Price each in Morocco Case\$12.00

No. 47 Micrometer Caliper

English or Metric Measure. Range 1 to 2 inches

Measures all sizes above 1 inch and less than 2 inches by thousandths of an inch. Outer end of frame is same size as measuring spindle and edges of measuring surfaces are left square. Provided with Clamp Ring, which clamps spindle and preserves the setting. Also made in the metric to measure all sizes above 25 and less than 50 millimeters, by hundredths of a millimeter; table of decimal equivalents being omitted.

Price each, regular\$6.50
Price each, with ratchet stop 7.00
Price of Morocco case75

No. 48 Micrometer Caliper

English Measure Only. Range 1 to 2 inches

This caliper differs from No. 47 only in being graduated to read ten thousandths as well as thousandths of an inch.

Price each, regular\$7.50
Price each, with ratchet stop 8.00
Price of Morocco Case75

A standard gauge to be used in adjusting caliper is furnished with each tool.

Brown & Sharpe's Tools

Nos. 61 to 84 Micrometer Calipers

English or Metric Measure

Made to meet the demand for an inexpensive, yet accurate measuring tool. More convenient for general use than the bar Micrometer or Vernier, being more readily set for different measures and easily handled where rapid measurements are required. Frame is an I section, combining great rigidity and strength with lightness. Will measure one-thousandth of an inch.

No. 130 Micrometer Caliper Set

Three Calipers, English or Metric Measure
Range 0 to 3 inches

An inexpensive set of accurate and convenient reference tools for inspecting finished products; also general shop use.

Set consists of one No. 19 Caliper, range 0 to 1 inch; one No. 38, range 1 to 2 inches; one No. 50, range 2 to 3 inches; all reading thousandths of an inch.

Price per set, regular \$17.50
Price per set, with ratchet stops 18.50
Price per set, with standards 19.00
Price per set, with ratchet stops and standards 20.00
Price of case extra 2.00

Furnished with standards, and in case, with ratchet stops unless otherwise ordered.

No. 135 Micrometer Caliper Set

Six Calipers, English or Metric Measure

This set of Micrometer Calipers is very similar to No. 130, except that it is more elaborate. The 1 inch caliper is the standard type with decimal equivalents stamped on frame and provided with a clamp ring; the 2, 3, 4, 5 and 6 inch calipers have frames or I section. Each micrometer is graduated to read thousandths of an inch.

In the metric this set will measure all sizes less than 150 millimeters by hundredths of a millimeter. Price per set, regular \$36.00
Price per set, with ratchet stop 39.00
Price per set, with standards 42.00
Price per set, with ratchet stop and standards 45.00
Price of case extra 4.00

No. 230 Paper Gauge Micrometer Caliper

English or Metric Measure
Range 0 to $\frac{3}{8}$ inch

Measures all sizes less than $\frac{3}{8}$ of an inch by thousandths. In measuring paper, sheet rubber, or other yielding substances, it is advantageous to use discs or washers on the ends of measuring spindle and adjusting screw, as the larger surfaces have less tendency to compress the material being measured. Also made in the metric to measure hundredths of a millimeter, table of decimal equivalents being omitted.

Price each, regular \$5.50
Price each, with ratchet stop 6.00
Price of Morocco Case50

No. 231 Paper Gauge Micrometer Caliper

English Measure Only
Range 0 to $\frac{1}{4}$ inch

Similar in design to No. 230. Measures all sizes less than $\frac{1}{4}$ inch by thousandths. Especially suitable for carrying in the pocket.

Price each \$5.00
Price of Morocco Case50

Brown & Sharpe Tools

Inside Micrometer Gauges English or Metric Measure

Gauge consists of a holder with a micrometer screw and thimble graduated to read to .001 in. Extension rods are graduated by a series of angular grooves of a form and depth that allow the clamping fingers to spring in and the adjustments quickly and positively made.

No. 260 —5 rods—2 in. to 9 1/2 in., with case.....	\$5.25
Without	4.50

Without	5.50

No. 262 Inside Micrometer English or Metric Measure

Similar to Nos. 260 and 261, except that it has a greater range. Made in the metric to read hundredths of a millimeter.

No. 262 —8 rods. 8 to 36 inches, with case.....	\$9.00
Without	7.50
No. 262 —8 rods. 200 to 900 m/m, with case.....	9.00
Without	7.50

Micrometer Heads English or Metric Measure

No. 290, 1/2-inch, graduated to read to thousandths of an inch or hundredths of a millimeter; length from lower end of barrel to shoulder, 3/4-inch. Diameter of barrel, 5/16-inch.

Price, each, with or without ratchet stop.....\$3.00

No. 291, 1/2-inch. Same as No. 290 except being graduated to read to ten thousandths as well as thousandths of an inch. English Measure only.

Price, each, with or without ratchet stop.....\$4.00

No. 294, 1-inch, graduated to read to thousandths of an inch or hundredths of a millimeter; length from lower end of barrel to shoulder, 3/4-inch. Diameter, 5/16-inch.

Price, each, with or without ratchet stop....\$3.50

No. 295, 1-inch. Same as No. 294 except being graduated to read to ten thousandths as well as thousandths of an inch. English Measure only.

Price, each, with or without ratchet stop....\$4.50

These micrometer heads are readily attached to machines or tools when fine adjustments are required. Can be furnished with clamp screw when so ordered.

Soft Leather Cases For Micrometer Calipers

Convenient for those who wish to carry a micrometer Caliper in the pocket. Price, each..... \$0.25

No. 598 Height Gauge Attachment For Use with Inside Micrometers Nos. 260 and 261

For use in connection with inside micrometers, making a reliable height gauge. Measuring rod is inserted upwards through under side of base and clamping fingers. By turning knurled nut, rod is held firmly in an upright position. Micrometer is then adjusted and clamped to upper end of rod. Base has a V-shaped groove in bottom, adapting tool for cylindrical work.

Price, each..... \$1.75

Micrometer Calipers

Explanation and Method of Reading the Calipers with Ten-Thousandths Graduations

Readings in ten-thousandths of an inch are obtained by means of a Vernier or series of divisions on hub of Caliper. These divisions are ten in number, occupy same space as nine divisions on sleeve and for convenience in reading are figured 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0.

When a line on sleeve coincides with first line of Vernier, next two lines to right differ from each other one-tenth of length of a division on sleeve; next lines differ by two-tenths, etc. See upper cut of graduations on hub and sleeve.

When Caliper is opened, sleeve is turned to left and when a division passes a fixed point on hub, it shows Caliper has been opened one-thousandth of an inch. Hence, when sleeve is turned that a line on sleeve coincides with second line (end of first division) of Vernier, sleeve has moved one-tenth of length of one of its divisions and Caliper opened one-tenth of one-thousandth, or one ten-thousandth of an inch. When a line on sleeve coincides with third line (end of second division) of Vernier, Caliper has been opened two ten-thousandths of an inch, etc. See lower cut of graduations, where a line on the sleeve coincides with fourth line (end of third division of Vernier) and reading is three ten-thousandths of an inch.

To read Caliper, note thousandths as usual, then number of divisions on Vernier, commencing at 0, until a line is reached with which a line on the sleeve is coincident. If second line, figured 1, add one ten-thousandth; if third, figured 2, two ten-thousandths, etc.

Calipers graduated to ten-thousandths should not be used commonly where fine measurements are not required, as a wear, which would be of comparatively slight consequence in a Caliper that reads only to thousandths, is perceptible and important in an instrument of this class.

H. Channon Company Chicago

Brown & Sharpe Tools

No. 570 Vernier Calipers

Front side

These calipers are graduated on the front to read, $\frac{1}{16}$ means of a vernier, to thousandths of an inch; on the back to 64ths of an inch. Will take inside as well as outside measurements. Points are placed on the bars and slides so that dividers can be set to transfer distances.

The smallest caliper is well adapted for carrying in the pocket, and is known as a pocket vernier.

No.	Size, Inches	Length of Jaws, Inches	Width of Jaws Closed, Inches	Price in Case

A standard is furnished when desired for testing the accuracy of the adjustment of the Calipers.

Price\$3.00

No. 573 Vernier Calipers English or Metric Measure

This tool is used for determining accurately, the depth of gear teeth, and is found especially valuable in the automobile shop for measuring transmission gears where it is impossible to use the regular vernier calipers on account of the thickness of the jaws. Except for the measuring jaws, this tool is exactly like the 12-inch Vernier Caliper No. 570 and can be used as such. Depth of jaws 1½ inch; width of measuring surface ½ inch.

Price each\$24.00

No. 576 Thread Tool Vernier

An extremely economical tool for measuring thread tools of different pitches, as it does away with the large number of gauges formerly necessary.

When in use, sliding jaw is set for width of point of tool of required pitch. Thread is then ground so that point bottoms on hardened steel strip inserted in blade and sides rest against jaws of tool.

Jaws or measuring surfaces are carefully hardened and ground, the angle being carefully tested for accuracy. Vernier reads to thousandths of an inch on one side of tool and to 50ths of a millimeter on other side.

Price 60°, 55° or 29° thread tool vernier with morocco case, price each\$18.00

No. 580 Gear Tooth Vernier English Measure

This Caliper is for the purpose of accurately measuring the distance from top to pitch line, and thickness at pitch line of gear teeth. By the use of this caliper compensation may be made for variation or error in size of blank.

All pitches from 20 diametral to 1 diametral can be measured.

The sliding jaw moves upon a bar graduated to read, by means of a Vernier, to thousandths of an inch. A tongue, moving at right angles with the jaws is graduated in the same manner. Both sliding jaw and tongue are provided with adjusting screws.

Price each 20 to 2 diametral pitch\$27.50
Price each 10 to 1 diametral pitch40.00

No. 581 Gear Tooth Vernier Metric Measure

This caliper differs from No. 580, only in reading to Metric Measure. Graduated to read to 1/50th of a millimeter. Range 1¼ millimeter to 12 millimeters.

Price each\$27.50

Browne & Sharpe Tools

No. 605 Micrometer Depth Gauge

English or Metric Measure

The 2 and 4-inch base Micrometer Depth Gauges will measure all distances to $\frac{1}{2}$ inches by .001 inch.

Screw in each of these Gauges has a movement of $\frac{1}{2}$ inch. Graduations are of such a form and depth that clamping fingers, at end of gauge, spring in, allowing $\frac{1}{2}$ -inch adjustments of rod to be quickly and positively made. Base is about $\frac{1}{8}$ inch thick, and, together with point of rod, is hardened. Also made to measure all distances to 63 millimetres by hundredths of a millimetre.

The $4\frac{1}{2}$ -inch base Gauge measures all distances to 12 inches by .001 inch.

Screw has a movement of 1 inch. Rod is graduated in inches. Base is about $\frac{1}{8}$ inch thick, and, together with point of rod, is hardened.

Also made to measure all distances to 300 millimetres by hundredths of a millimetre.

No. 610 Universal Depth Gauge

English Measure

A spiral spring in the barrel forces the blade against the bottom of the hole or recess. A friction clutch, free to move under pressure of the spiral spring, holds the blade without clamping. A clamp nut at the top of the barrel clamps the blade securely in position.

The blade is a narrow 6 in. tempered steel rule graduated to 64ths on one side and 100ths on the other. The blade can be swiveled completely around without disturbing the setting. The base is about 3 in. long, $\frac{1}{4}$ in. wide and carefully hardened and ground.

When desired, blades graduated to 32ds and 64ths or 50ths and 100ths. Can also be furnished in the Metric Measure to read to 1 millimeter on one side and to $\frac{1}{2}$ millimeter on the other. Measures to 95

limeters in depth.	
ce, each	\$3.00

No. 615 6-Inch Round Rule Depth Gauge

English Measure

Illustration shows the head and the blade of a 6-inch rule depth gauge.

The head can be conveniently held. It is made of steel $\frac{1}{8}$ inch thick, hardened.

The blade is a 6-inch narrow tempered steel rule.

The blade sent with the gauge is divided into 64ths and 100ths of inches.

Will furnish, if desired, blades divided into 32ds and 64ths, or 50ths and 100ths of inches.

This depth gauge is also furnished with a blade 15 centimeters long, graduated on one corner to $\frac{1}{5}$ millimeter and on the other corner to 1 millimeter.

Price	\$1.25
-------	--------

No. 585 Vernier Height Gauge

English, Metric, and English and Metric Measure

For obtaining the height of projections from a plane surface or the location of bushing in jigs, etc. Bar is 10 inches long, admits of measurements up

to 8 inches in height and is graduated to read, by means of a Vernier, to thousandths of an inch. Reads on one side to outside measurements and on the other to inside. Jaws are about 2 inches long and 1 inch wide when closed. Fixed jaw is 1 inch thick, allowing gauge to stand upright, and rounded on end for use close to a projection. An extension for movable jaw is furnished.

Graduated in the metric to read to 1/50 m/m on one side and to $\frac{1}{2}$ m/m on the other. Graduated in the English and Metric to read to 1/50 m/m on one side and thousandths of an inch on the other.

Price each, in Morocco Case	\$31.75
-----------------------------	---------

Can furnish 18-inch height gauge at special price.

No. 600 Vernier Depth Gauge

English, Metric, or English and Metric Measure

This Depth Gauge is used in obtaining the depth of holes, recesses in dies, distance from a plane surface to a projection, etc. The blade is 5 inches long, $\frac{1}{4}$ inch wide, and is graduated on the front to read, by means of a vernier, to thousandths of an inch, and to 64ths of an inch.

This Depth Gauge is also furnished graduated to read to 1/50th of a m/m on one side and to $\frac{1}{2}$ m/m on the other corner of the same side; or 1/50th of a m/m on one side, and by means of a vernier, to 1/1000th of an inch on the other side.

Brown & Sharpe Tools

No. 493 Improved
Bevel Protractor

For all classes of work, where angles are to be laid out which do not require such a fine degree of accuracy as is possible with a protractor having a vernier. One side of stock is flat, that it may be laid flat on work. Dial is graduated to degrees over an arc of 180° . Blade is about $\frac{1}{8}$ inch thick, can be moved back and forth its entire length and clamped independently of dial, thus adapting protractor for work where others cannot be used.

Improved Universal
Bevel

Provided with an offset blade that admits of the measurements of all angles. Length of head and tongue 3 in. Case is solid on top for $1\frac{1}{2}$ inches from square end.

Price each	\$1.50
------------------	--------

No. 496 Improved Universal Bevel
Protractor

With Acute Angle Attachment

For all classes of work where angles are to be laid out, and with the attachment, a new feature extremely small angles can be easily and quickly established. Dial is accurately graduated and alignments are perfect.

A vernier, which reads to 5 minutes or $1/12$ of a degree, adds materially to the fineness with which angles can be laid out. A fine adjustment is provided by means of a small thumb screw furnished as an attachment.

Protractor with 6 in. blade.....	\$12.00

Protractor with 12 in. blade.....	13.00
In Morocco case.....	14.00
Protractor with 6 and 12 in. blades.....	13.50
In leatherette case.....	14.50

No. 510 Draughtsmen's Protractor

This Protractor can be quickly set to any angle. It can be used either side up and on either of the two outside edges of the frame. Also can be used to advantage in dividing a circle, transferring angles or laying off a given angle, without resetting, on either side of a line.

The Vernier reads to five minutes.

It forms a convenient extension of a T square and frequently takes the place of 45° and 60° angles.

Price each without case.....	\$1.00

Brown & Sharpe Tools

No. 730 Dial Test Indicator English or Metric Measure

Especially serviceable in erecting or inspecting machines determine any inaccuracy in a surface or in the movement of a spindle, arbor, etc. Parts are adjustable to any angle. Points are removable from the post and used independently. Points are removable to permit use of different angles. The movement of the measuring surface that bears on the work is magnified a number of times and indicated by the pointer. The dial, about 1 1/4 in. in diameter, has to .001 in., has a white enamel face and is adjustable to allow the setting of the zero to any required position. The spindle has a movement of 1/4 in. The base is 8 1/2 in. long; width 2 1/4 in., the post 9 in. high.

For use on the under side of the base, a split block and an angular post are furnished.

Each tool is packed in a substantial box fitted to hold various parts when not in use.

Metric Measure. Also made with metric Dial and reads 0.1-100 m/m.

English Measure. Price each.....\$20.00

Metric Measure. Price each.....20.00

No. 735 Test Indicator English or Metric Measure

This Indicator is especially useful to those erecting or erecting machines. Parts are adjustable to any angle. Movement of point is magnified a number of times by length of index finger and its movement may be read upon the graduations shown. Indexing finger may be brought to zero by knurl headed screw shown, whatever the position of the indicator. A split block and angular post are furnished with indicator.

Also made in metric measure to read to 1-50 m/m. Length of base 8 in. Height of post 9 in. Price, each, \$15.00

No. 750 V Blocks And Clamps

Designed particularly for laying out work accurately in connection with a surface plate and knee. Made of tool steel hardened and have sides ground parallel and V grooves carefully ground central and parallel to bottom and sides. Sold only in numbered pairs, so that V grooves in blocks of the same numbers are always in alignment. Each block is approximately 1 1/4 x 1 1/2 x 1 3/8 in. in size and will take work to 1 1/8 in. diameter.

Price, per pair.....\$5.50

Blocks are not sold singly.

No. 752 Toolmakers' Vise

A reliable and handy tool for use in drilling, fitting, and laying out work on surface plates. Screw will hold jaws rigidly in place. Drop-forged and case-hardened, thus adapting it for hard usage without danger of damaging. It is light and convenient to handle, being frequently held in the hand during operations. The distinctive feature in this tool is the V groove in under side of base. This adds to its utility, as it can be used as a V block. Greatest capacity of Vise is 2 in. Each Vise is furnished with two steel jaws that slip on and off the end of screw.

Price, each.....\$1.25

No. 754 Improved Toolmakers' Clamps

These Clamps are designed and proportioned throughout to insure the greatest strength and rigidity. The jaws are rounded on the ends to allow clamping under a shoulder or recess. The spring attachment holds the "loose" jaw tightly and prevents its dropping or sliding while opening or closing the clamp.

They are very convenient where a large number of pieces of the same size are to be clamped for drilling, as the spring attachment holds the jaws at the required distance for removing and inserting each piece.

No.	Opening of Jaws	Length of Jaws	Price Each
754	1 3/8"	1 1/2"	\$0.60
	1 1/2"	2 1/8"	.70
	1 3/4"	2 3/4"	.85
	2 1/4"	3 3/8"	1.00
	3 1/8"	4 1/2"	1.10
	3 3/8"	5"	1.75

Brown & Sharpe Tools

No. 630 Screw Pitch Gauge

22 Pitches

This Screw Pitch Gauge will measure the threads of nuts as well as of screws and contains the pitches 9, 10, 11, 11½, 12, 13, 14, 15, 16, 18, 20, on one end, and 22, 24, 26, 28, 30, 32, 34, 36, 38 and 40, on the other end. Price, each\$1.00

No. 631 Screw Pitch Gauge

This Screw Pitch Gauge is the same in design as No. 20. It contains 24 blades with pitches 4, 4½, 5, 5½, 6, 7, 8, 9, 10, 11, 11½ and 12, on one end, and 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, and 30, on the other. Price, each\$1.25

No. 632 Screw Pitch Gauge

Similar to No. 630. Contains 30 blades with pitches 4, 4½, 5, 5½, 6, 7, 8, 9, 10, 11, 11½, 12, 13 and 14 on one end and 16, 18, 20, 22, 24, 26, 27, 28, 30, 32, 34, 38, 40 and 42, on the other. Price, each....\$1.50

No. 634 Screw Pitch Gauge

22 Pitches

Actual Size

Designed especially for bicycle manufacturers, electricians and others using screws with fine V-threads. Contains 22 blades with pitches 32, 34, 36, 38, 40, 42, 44, 46, 48, 50 and 52 on one end and 54, 56, 58, 60, 62, 64, 66, 68, 70, 72 and 74 on the other. Price, each\$1.00

No. 635 Screw Pitch Gauge

Similar to No. 634. Contains 26 blades with pitches 2½, 2¾, 3, 3¼, 3½, 3¾, 4, 4½ and 5 on one end, and 5½, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 18 and 20 on the other. It also contains a blade with a gauge for grinding Thread Tools. Price, each\$1.50

No. 636 Screw Pitch Gauge

International System

17 Pitches

Made after the French System of the Society of Encouragement for National Industry. Same in design as No. 634, and can be used for measuring outside as well as inside threads. Contains blades with pitches ½, ¾, 1, 1¼, 1½, 1¾, 2, 2½, 3, 3½, 4, 4½, 5, 5½, 6, 6½, and 7 millimeters per inch. Also contains a blade with gauge for grinding the tools. Price each\$1.00

No. 633 Screw Pitch Gauge

"V" Threads

The triangular form of the face of this screw pitch gauge permits a compact holding of blades to measure threads of nuts as well as screws.

Three per inch
4, 4½, 5½, 6, 8, 9, 10, 11, 11½, 12, 13, 15, 16, 18, 20, 22, 24, 26, 27, 30, 32, 34, 36, 38, 40, 42, 44, 50, 52, 54, 56, 58, 60, 62, 64, 68, 70, 72, 74, 76, 78, 80, 82, 84.
Price each\$1.00

No. 640 Thickness Gauge

English Measure

This Gauge consists of a set of 22 steel blades varying in thickness from .004 to .025 of an inch by thousandths. The blades may be used singly or in combination, as may be desired. Plain figures easily read, indicate the thickness of each blade. Also furnished in the Metric Measure. Price, each\$1.00

No. 736 Lathe Test Indicator

The Lathe Test Indicator is new in design and is for use in setting centrally any point or hole in a piece of work to be operated upon in a lathe or upon a face plate. It is also well adapted for testing lathe centers, shafting or other work held between centers, the inside or outside of cylinders, pulleys, etc., and all work of a similar class.

Finger holder is furnished with two fingers, either one of which can be quickly attached; one finger ground to an angle of 60°; the other is bent for inside and outside testing. A spiral spring is provided for holding finger against work with an even pressure.

Price, each.....\$3.00

No. 738 B. & S. Indicator English or Metric Measure

For setting centrally any point or hole in a piece of work to be operated upon in lathe or upon face-plate, testing lathe centers, shafting and other work held between centers and inside and outside diameters of pulleys, etc. Shank is hardened steel, designed to be held in tool post of a lathe. Indicator point is hardened steel, made spherical to allow pressure to be brought upon it by work from any angle. Scale is graduated to 1000ths of an inch and reads .007 in. either side of zero.

Also made to read in metric measurement to approximately 1 m/m either side of zero by hundredths of a m/m. Price each.....\$5.75 In Morocco case.....\$6.20

No. 748 B. & S. Speed Indicator

For determining velocity of shafts and spindles running in either direction. Registers on either side, front side used to determine velocity of shafts and spindles running in one direction; reverse side speed of those running in opposite direction, avoiding all confusion and errors.

Dials register units and tens by means of a revolving pointer and, in addition, front dial registers hundreds up to 5000 by means of a rotating disk in the centre. This disk will register when either side is used.

Quick use is greatly facilitated by means of a small knurled wheel on side of case which, when turned, reverses the rotating disk on the front dial to starting point.

Price each.....\$5.50 In Morocco case.....\$6.00

Improved Steel Beam Trammels

The adjustable points are held by spring chucks and can be removed easily and replaced by pencil or other special points.

A pair of caliper points is furnished with these trammels.

Trams are clamped by knurled nuts to beam, which is flattened on top, and thrust taken by washers to prevent marring bearing surfaces. A spring friction holds trams in place when nuts are loosened for setting. One tram has adjusting screw and slide, convenient for fine adjustment of points.

Price Each

With 9 inch beam, will describe an 18 in. circle.....\$3.00
With 13 inch beam, will describe a 26 in. circle..... 3.00
With 27 inch beam, will describe a 54 in. circle..... 3.50
Single extension beam for 13 inch size, extra..... 1.00

Standard End Measuring Rods No. 655 With Spherical Ends

For measuring rings, cylinders, etc., setting calipers, comparing gauges, or work of like character and especially useful for measuring parallel surfaces. Made of steel, ends hardened and ground, so that the ends are sections of true spheres of diameter equal to length of rod.

Rods 3 to 6 in. long are 3/8 in. diameter, larger 1/2 in.

Length in.	3	4	5	6	7	8	9

Can also furnish in the Metric Measure.

Standard Reference Disks English Measure

For reference sizes in shop practice, such as testing measuring tools, setting calipers, etc. Generally used without handles. With handles, however, they may be used in place of Standard Cylindrical Gauges, but are not recommended for constant use as substitutes for them, being designed to serve principally as reference, not as working gauges.

Disks are hardened, ground and accurately lapped to size; width of measuring surfaces are suitably proportioned to size of Disk. They are furnished singly of any desired size, but are usually furnished in sets, consisting of 45 Disks from 1-4 inch to 3 inches, varying by 16ths, including 6 handles.

H. Channon Company Chicago

Brown & Sharpe Tools

B. & S. Tool Makers Calipers and Dividers

These Calipers and Dividers present features not previously embodied in tools of this class. Fulcrum stud is hardened. Spring is unusually stiff and of a construction that insures rigidity, prevents side deflection of legs and gives uniform pressure. Legs are steel, round and highly polished; measuring points come together evenly. Especial attention is called to the 2-inch sizes, as they are convenient for small, light work and for the pocket.

Size, inches.....	2	3	4	5	6
Price each.....	\$1.00	\$1.25	\$1.50	\$1.50	\$1.75

Rex Spring Calipers and Dividers

No. 810 Divider, No. 811 Outside Caliper, No. 812 Inside Caliper.

These Calipers and Dividers are somewhat lighter than those shown below, but the same care is taken in their construction as in the more expensive line, same spring, fitted to the legs in a somewhat different manner, is used and same Spring Nut. Rex Calipers are neat and attractive in appearance, and durable. Adjusting screw is hardened to prevent wear, and thumb attachment is provided for Spring Dividers.

Size, inches.....	2 1/2	3	4	5	6	8
With spring nut.....	\$0.80	\$0.85	\$0.90	\$0.95	\$1.00	\$1.15
With solid nut.....	.65	.70	.75	.80	.85	1.00

B. & S. Spring Calipers and Dividers

These Calipers and Dividers combine lightness and durability. Legs are steel drop forgings. Spring is unusually stiff and of improved form, with convex ends that fit into concave grooves, milled in ends of legs insuring great rigidity. Spring nut is constructed on the principle of a spring chuck with jaws hardened. It is positive in action when closing, thread engaging screw on slightest pressure. When pressure is with drawn nut is released at once and slides freely on screw. It is dust proof and combines all the advantages of the solid nut with that of quick adjustment. There are no loose pieces. Screw is steel hardened to prevent wear and a thumb attachment is provided for Spring Dividers.

Brown & Sharpe Tools

No. 770. Automatic Center Punches

The tool is of steel entirely self-contained, the striking mechanism being enclosed in the knurled handle, which is of such a size and form as to be held conveniently in the hand.

A downward pressure releases the striking block and makes the impression.

The points can be taken out for grinding and are easily replaced if broken.

Style 1. $4\frac{1}{2}$ inches long, $\frac{3}{8}$ inch in diameter. Price, each.....\$1.25

Style 2. $5\frac{1}{2}$ inches long, $\frac{3}{8}$ inch in diameter. Price, each.....1.50

Style 3. 6 inches long, $\frac{3}{8}$ inch in diameter. Price, each.....2.50

Style 3 differs from 2 in being slightly heavier in construction and capable of striking a much heavier blow.

Style 4. $11\frac{1}{2}$ inches long, $1\frac{1}{8}$ inches in diameter. Price each \$25.00 For use in rolling mills for testing the hardness of metals.

Extra points can be furnished as follows: Style 2 and 3, each \$0.15; style 4, \$0.25.

No. 771. Adjustable

This is similar to Styles 2 and 3, but has an adjustable stroke.

$5\frac{1}{2}$ inches long, $\frac{3}{8}$ inch in diameter.

Price each.....\$2.00

Extra points, each......15

No. 778. B. & S. Scribes

These Scribes are made with the intention that they shall be a little better than the ordinary requirements of such a tool.

The points are of tool steel, finely tempered. They are threaded to screw into the holder and knurled for a finger grip. The knurled holder has long bearings to support the points firmly when in place and is of a suitable size to be held conveniently.

Style 1, shown by top illustration is for carrying in the pocket. Point is held in handle, by a 4-lawed chuck by which it can be set and held in any position. Point may be reversed and scribe closed to about $8\frac{1}{2}$ inches.

Style 1—Single point. Price each.....\$0.40

Style 2—Single point. Price each......30

Style 3—Double point. Price each......35

No. 790. Mercury Plumb Bobs

These Plumb Bobs are made from a solid steel rod, bored out and filled with mercury, or quick-silver, which makes them unusually heavy in proportion to their size. The center of gravity is low. The comparatively small diameters allow them to be used close to corners and walls. They are not easily affected by draughts of air and are convenient to be carried or packed in small spaces. The points are hardened and the bodies and points are ground. The Plumb Bobs are nickelplated and each is furnished with a braided silk line.

Weight, ozs.	Length, in.	Diameter, in.	Price each.

Standard Caliper Gauges

Carefully hardened and ground and accurately lapped to size. By their use mistakes in setting of calipers and variations in measurements by different workmen will be in a great measure avoided. Their form gives lightness and strength, making them preferable to plugs and rings for frequent use. Measuring surfaces are

amply large to insure accurate measurements and maintenance of Gauge sizes. As furnishing convenient and reliable standard sizes for every-day use in the workshop, they are of great advantage, and their use will contribute to uniformity in production of working parts of machinery.

Single End, Unfinished

Williams' "Vulcan" External Caliper Gauges

These are drop-forged from either mild steel, suitable for case-hardening, or from Crucible Tool Steel. We will supply directions for hardening, or case harden to order, but cannot undertake machining.

Williams' "Vulcan" Internal Caliper Gauges Double End, Unfinished

These are drop-forged from either mild steel, suitable for case-hardening, or crucible tool steel. We will supply directions for hardening, or case-harden to order, but cannot undertake machining.

The lettering-panels and sides of jaws are on same plane and may be finished by a single grinding or polishing operation.

Small bosses at ends of internal gauges provide ready means of centering for lathe turning.

The special size of the measuring-jaw or pad provides for unusual advantages; four classes of gauges may be made from one forging:

1. Plain gauge; same dimension both ends.
2. Gauge with one end of exact dimension, other end for two limits allowed.
3. Gauge with any two dimensions within range of table limits.
4. Gauge of the "go in" and "not go in" variety; two combinations.

Furnished unfinished only, packed half dozen in box. Crucible tool steel gauges are stamped "T" to indicate their grade.

Protractor Head with Level for the 24 inch, Price... 3.00

The blades are made with Nos. 1, 2, 4 and 7 Graduations

Brown & Sharpe Tools

No. 541 Improved Hardened Cast Steel Try Squares

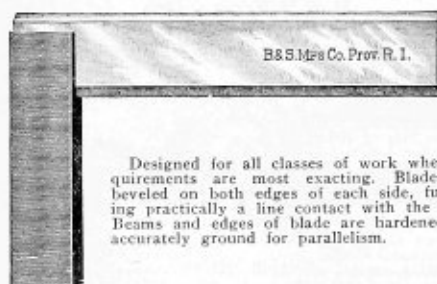

This improvement in making large Try Squares consists in securing the blade to the beam by means of screws, whereby they are made more permanent and accurate and can be more readily and economically repaired.

The length of blade, as given, is from the inner edge of beam to end of blade. The screws should be adjusted only at the factory. Substantial wood cases furnished with these squares.

Number	Length of Blade, inches	Length of Beam, inches	Price Each
541	24	13 1/2	\$30.00
	30	16 1/2	40.00
	36	19 1/2	50.00

No. 542 Hardened Steel Squares with Beveled Edges

Designed for all classes of work where requirements are most exacting. Blades are beveled on both edges of each side, furnishing practically a line contact with the work. Beams and edges of blade are hardened and accurately ground for parallelism.

Number	Length of Blades	Length of Beam	Price Each
542	1 1/2	1 1/2	\$2.75
	3	3 1/2	3.75
	4 1/2	3 3/4	5.50
	6	4 3/4	7.50

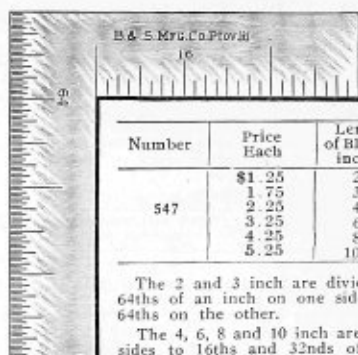

No. 544 Graduated Steel Squares Not Hardened

The length of blade, as given, is the extreme length over all.

Substantial Wooden Cases for protecting the Squares when not in use, furnished when desired, for the 9-inch and 12-inch.

Number	Length of Blades	Length of Beam	Price Each	Price of Case
544	3	2 1/2	\$2.50	-----
	4	2 1/2	3.75	-----
	6	3 3/4	5.00	-----
	9	5	8.00	\$0.50
	12	6 1/2	9.50	.75

Thin Steel Squares

Number	Price Each	Length of Blades, inches	Width of Blades, inches
547	\$1.25	2	1/2
	1.75	3	3/4
	2.25	4	1
	3.25	6	1 1/2
	4.25	8	1 3/4
	5.25	10	1 1/2

The 2 and 3 inch are divided to 16ths and 64ths of an inch on one side and 32nds and 64ths on the other.

The 4, 6, 8 and 10 inch are divided on both sides to 16ths and 32nds of an inch.

No. 560 Caliper Squares

Convenient for a large class of work where extreme accuracy is not required. Also valuable for use in duplicating work when the number of pieces will not warrant the expense of fixed gauges.

Adjusting screw enables sliding head to be more accurately set to graduations than would be possible without its use.

The 4 in., 6 in. and 9 in. Caliper Squares take inside as well as outside measurements. The 6 in. and 9 in. Squares have hardened jaws.

Size, inches 2 *4 4 6
Length of jaws, inches 3/4 1 1 1/2 2
Width of jaws, closed 1/4 1/4
Without adj. screw \$3.25 5.50 7.00 11.00
With adjusting screw 4.50 6.00 6.50 9.00 11.00

Graduated on one side to 64ths, on other to 100ths of an inch.

*For boiler makers, steamboat inspectors, etc., for measuring boiler plates. Jaws are designed for external measurements only.

Also made in the metric or English and Metric.

Universal or Centre Squares

Four inch blade 1st cor. 32nds, 2nd cor. 20ths.

6, 8, 10 and 12 in. blade, 1st cor. 16ths, 2nd cor. 12ths.

Last inch, 1st cor. 32nds, 2nd cor. 48ths.

Number	Price Each	Length of Blade, inches	Length of Head, inches
556	\$2.00	4	3
	2.50	6	4
	3.50	8	5 1/2
	5.00	10	7
	6.00	12	8 1/2

Brown & Sharpe Tools

No. 391 Steel Caliper Rules

Convenient for use in stock rooms or stores, in selecting feet or bar stock, wire, tubing, etc. Slide of 3 inch can be drawn out to measure 2 1/4 inches and the 4 inch to measure 3 1/4 inches.

The 3 inch rule can be furnished nickel plated when desired. Price 15c extra. Divided into Parts of an Inch as follows:

	A	B	C	D
cor. 8, 14, 28	8, 14, 28	8	8	8
cor. 12, 24, 48	12, 24, 48	16	16	16
cor. 16, 32, 64	16, 32, 64	32	32	32
cor. 20, 50, 100	20, 50, 100	64	64	64
cor. 32 & 64	64 & 100	32 & 64	64 & 100	

Price, each, 3-inch, \$2.50 4-inch, \$3.00
Can also furnish in the metric measure.

Triangular Metallic Scales.

These patent triangular metallic scales are of the size and shape of the common 12 in. triangular boxwood scales. They are made from brass tubing with the ends closed, polished with a dull finish and weigh less than 3 1/2 ounces. The liability of the wood scales to crack, warp or twist, the chipping of their edges and their variation from standard measurement, are well known to all who have used them. These objections are all overcome in the new scales. The ends of these scales are covered with hardened steel plates which slightly raise the scales from the surface.

No. 520. 12 in., divided to scales of 1/4, 1/2, 3/4, 1, 1 1/4, 2, 3 and 4 inches to the foot and 16ths of an inch.	
Price, each	\$2.50
No. 521. 12 in., divided to scales of 1/8, 3/8, 1/2, 5/8, 3/4, 7/8 and 3 inches to the foot and 16ths of an inch.	
Price, each	\$2.50
No. 522. 12 in., divided on one edge to 10ths, 20ths, 30ths, 40ths, 50ths and 60ths of an inch; 60ths and 80ths of an inch.	
Price, each	\$2.50
No. 523. Divided on one edge to 20ths, 30ths, 40ths, 50ths, 60ths and 80ths of an inch.	
Price, each	\$2.50

Patent End Graduations

All Tempered and Standard Steel Rules 2 to 12 inches in length with No. 4 Graduations are furnished with Patent End Graduations, reading to 32ds of an inch on two ends of one side. This feature will be found advantageous in measuring the depth and width of grooves, countersinks and recesses of various kinds.

No. 303 Narrow Tempered Steel Rules

These rules are about 1-20th inch thick and 7-32 inch wide, graduated on one corner of each side only.

Length, inches	4	6	9
Price, each	\$0.50	.65	1.00

Furnished with No. 10, 11 or 12 Graduations.

Also furnished in the metric or English and Metric Measure.

No. 306 Flexible Steel Rules

Graduated on one side only.

Brown & Sharpe Tools

No. 335 Steel Rules with Holder

The Rules and Holder are convenient where the ordinary rule cannot be used, as in measuring a recess or keyway, as well as the general class of tool and die work.

The holder takes either of the five sizes of rules. The barrel is knurled for finger grip. The rules are held in a split chuck, adjusted by a knurled nut at the top of the barrel, and can be set at various angles according to the work.

The rules are of tempered steel, graduated on both sides as follows: 32ds on one side and 64ths on the other, or 50ths on one side and 100ths on the other.

Also furnished graduated to millimeters on one side and half millimeters on the other.

Five Rules Interchangeable in One Holder

*These sizes are graduated as Standard Rules on one side and Shrink Rules on the other, and to 32ds and 64ths on both sides. The others are graduated as Shrink Rules on both sides.

For List of Graduations See Preceding Page

No. 353 Narrow Steel Rule

We carry in stock a steel rule, not tempered, 6 in. long, about 1 1/2 in. wide and furnish it with Nos. 1, 2, 4, 6 or 7 graduations. This rule corresponds to the Standard Steel Rule but is lighter.

Price, each\$0.65

No. 374 Key Seat Rules

Parallel lines for key seats, mortises, etc., can be readily and accurately drawn with these rules on shafts not less than 1/8 inch in diameter.

The edges are beveled and graduated to 32ds of an inch. Also furnished in the metric measure.

Length, inches 4 6 8
Price, each \$2.50 \$3.00 \$3.75

No. 380 6-Inch Rule with Slide

Rule is 6 inches long, about 1/8 inches wide, 1/8 inch thick and furnished with Nos. 1, 2, 4, 6 or 7 graduations. Metric rules graduated on three corners to millimeters and on one corner to half millimeters.

Price, each\$1.25

No. 385 Slide Caliper Rule

English or Metric Measure

The Slide Caliper Rule, shown in cut, is of steel, about 4 1/2 in. long and 1/8 in. thick. It is graduated on both corners to 32nds of an inch.

The jaws are 1/8 in. deep. The Metric rules are graduated to half-millimeters.

Price, each1.50

No. 388 Pocket Slide Caliper Rule

English or Metric Measure

Graduated on one corner of one side to read to 32ds. Other side graduated to 64ths and has a range of 2 inches. When slide is set far any particular measurement it can be securely clamped in position by a clamp nut.

Jaws are 3/4 inches deep. Nibs can be inserted in holes 1/8 inch in diameter.

Metric Rules are graduated to millimeters and half-millimeters.

Price, each\$2.60

H. Channon Company Chicago

Brown & Sharpe Tools

No. 674 Rolling Mill Caliper Gauge

This Rolling Mill Caliper Gauge is intended for use on the heavy class of work found in rolling mills in measuring

sheet iron and steel but can be used equally well in stock and store rooms.

It is $5\frac{1}{4}$ in. long and $\frac{7}{8}$ in. thick. The jaws are $3\frac{1}{4}$ in. deep and can be drawn apart to measure 4 in. The tongue is graduated on one side to 32ds of an inch.

The caliper is made of tool steel, drop forged and is strong enough to withstand any strain to which it may be subjected. When the jaws are set they can be securely clamped so that measurements of different sheets of stock of the same thickness can be made without the necessity of resetting the caliper. Price each ... \$6.00

No. 677 Caliper and Wire Gauge—English or Birmingham Standard

Especially useful for stock and store room purposes in selecting iron, steel and sheet stock, also for iron and steel rollers' use. Caliper is used for odd sizes of stock.

Made of steel, $5\frac{1}{4}$ in. long and about $\frac{7}{8}$ in. thick. Jaws are 2 in. deep. The tongue is graduated on both sides to 32ds of an inch and can be drawn out to measure 4 in. Gauge numbers are those of the English or Birmingham Standard and run from 1 to 32.

Price, each \$7.00

No. 680 Caliper and Wire Gauge—U. S. Standard

This tool is similar in general design to the No. 677 with the exception that the gauge numbers which run from 1 to 32 are those of the U. S. Standard for sheet and plate iron and steel adopted by Congress, March 3, 1893.

Price each \$7.00

No. 725 Depth of Gear Tooth Gauges

Depth of Gear Tooth Gauges for all regular pitches, from 3 to 48 pitch inclusive

are carried in stock. One gauge answers for each pitch and indicates the extreme depth to be cut. Price each, \$0.25

Price, Sizes to 3 Pitch, made to order, \$0.75 each
Larger Sizes, \$1.25

No. 688 American Standard Wire Gauge

Adopted by the Brass Manufacturers Jan., 1858

These Gauges are made from the best steel and are tempered, adjusted, and warranted accurate.

Sizes 0 to 36 \$2.50

Sizes 5 to 36 2.00

In order to familiarize the users of the gauge with the decimal equivalents of the gauge numbers, these decimal equivalents expressed in thousandths, are stamped on the back, opposite to the regular gauge numbers.

No. 690 English Standard Wire Gauge

The Same as Stubs' Wire or Birmingham Gauge

1 to 36 \$2.00 6 to 36 \$2.50

No. 692 Washburn & Moen Standard Wire Gauge

Sizes 0 to 36. Price \$2.50

Same size and design as No. 688.

No. 694 U. S. Standard Gauge

Price \$2.50

The Gauge numbers, which run from 0 to 36 are those of the U. S. Standard Gauge for Sheet and Plate Iron and Steel, adopted by Congress March 3, 1893.

No. 700 Pocket Screw and Wire Gauge

This Gauge as shown is an angular gauge graduated on the front, on the left of slot, to show all sizes of the American standard screw gauge from 0 to 30, and is designed for the measurement of wire as well as of machine and wood screws.

In addition to the gauge numbers, the front side of the Gauge is also graduated on the left of slot to 32nds of an inch.

The back side of Gauge is graduated as the old or English wire gauge, from 17 to 0000 on the right, and the new or American wire gauge from 15 to 0000 on the left of slot.

No. 700. Price \$2.50

Brown & Sharpe Tools

No. 642 Thickness Gauge English Measure

This Gauge is similar in design to No. 640, and consists of a set of nine steel blades, .0015, .002, .003, .004, .006, .008, .010, .012 and .015 of an inch in thickness. Price each\$1.00

No. 643 Thickness Gauge Metric Measure

This Gauge is of the same design as the No. 640, and consists of a set of nine steel blades of the following thicknesses: .04, .05, .08, .10, .15, .20, .25, .30 and .35 m/m. Price each.....\$1.00

Universal Surface Gauges

A wide range of adjustments can be quickly obtained by means of knurled adjusting screw. Maximum adjustment can be quickly obtained, and at the same time adjustment is so arranged that all moving parts can be firmly clamped in position when desired setting has been obtained.

Spindle passes through a bushing and bolt clamped by a knurled nut firmly to boss on base thereby removing any possibility of play in working parts when spindle has been clamped in position.

A V-shaped groove in the bottom of base especially adapts it for cylindrical work. Has two gauge pins in rear end that can be pushed down and used against edge of a plate or side of a T slot.

Spindle swivels, can be securely clamped in any position from the vertical to the horizontal, and the scriber may be used below the base as a depth gauge. For small work the spindle may be removed and the scriber inserted in a hole provided, where it is readily adjusted.

Universal Surface Gauge, No. 620

No. 702 Long Screw and Wire Gauge

This Gauge is graduated on both sides of slot to show all sizes of the American Standard screw gauge from 0 to 30 and is designed for the measurement of wire as well as of machine and wood screws.

This Gauge can also be used to show the sizes of A. S. M. E. Standard screws.

Front of Gauge is also graduated on both edges to 8ths of an inch.

Back of the Gauge is graduated as old or English wire gauge from 17 to 0000, on right, and to 32ds of an inch on left of slot. Outer left hand edge is graduated to 32ds of an inch.

Price each \$3.50
Extra thick. Price each 4.50

No. 705 Twist Drill and Steel Wire Gauge

The Nos. 1 to 60 Gauge is about $\frac{1}{16}$ inch thick, $\frac{1}{4}$ inches wide and $5\frac{1}{4}$ inches long, with decimal equivalents stamped on reverse side. The Nos. 61 to 80 Gauge is about $\frac{1}{8}$ inch thick, $\frac{3}{4}$ inch wide and $\frac{1}{2}$ inches long. Black or polished, as desired.

Price each, Nos. 1 to 60 \$1.25
Price each, Nos. 61 to 80 2.00

No. 710 Jobbers Drill Gauge

For gauging twist drills. Sizes $\frac{1}{16}$ to $\frac{1}{2}$ inch.
Price each \$2.50

No. 715 29° Screw Thread Tool Gauge

This Gauge furnishes a correct standard to which tools can be ground to cut threads, of a uniform angle, to take the place of square threads.

This Gauge is made of the best steel, tempered adjusted, and all angles accurately tested after hardening.

Price each \$2.75

No. 696 Steel Music Wire Gauge

American S. & W. Co.'s new standard.

Numbers 000000 to 33.

Decimal equivalent stamped on reverse side.

For table of different standards of wire gauges, see top of page.

Price each \$2.50

Starrett's Tools

No. 232 Short Anvil Micrometer English Measure, Range 0 to 1-2 inch

The anvil on this micrometer is shortened for use in places where ordinary anvil is too long to be inserted. Graduated to read by thousandths up to one-half inch. Has lock nut and ratchet stop.

Price, each \$5.50

By means of this attachment any 2 inch Starrett micrometer may be instantly converted into a 1 inch tool.

Price, each ... \$2.00

No. 222 Micrometer Sheet Metal Gauge

English Measure
Range 0 to 1/2 Inch

This gauge has a 2-inch depth of throat to reach over the edge of sheet metal to gauge its thickness nearer the center. For measurement by thousandths to 1/2 inch. Has ratchet stop and lock nut. Decimal equivalents are stamped on frame.

Price, each \$7.25
Extra for Leather Case..... .75

No. 128 Patent Six-Inch Micrometer

This micrometer will measure round work to 4 1/4 inches, and flat work to 6 inches. It can be quickly set to exact position, from 1 inch to 6 inches, by inserting a plug as shown. A valuable feature of this tool is a set of six independent holes through both the movable part and the beam, each hole being bushed with hardened steel bushings, ground and lapped to fit the plug, which locates to exactness the various inch settings.

Price \$20.00
In Leather Case..... 21.50

Starrett's Tools

No. 226 Micrometer Sets, English Measure
Range 1 to 6 inches

These micrometers meet the demand for accurate gauges at a low price.

Each micrometer is graduated to read by thousandths of an inch, is furnished with patent lock nut, and is sent with or without ratchet stop as desired.

The 1 inch has the decimal equivalents stamped on the frame. The other sizes are marked to show their capacity.

Standards for use in adjusting these micrometers will be furnished when desired.

Micrometers will be supplied singly or in sets as desired; and will be sent with ratchet stop and without leather case or standard unless otherwise ordered.

No. 234 Standard End Measuring Rods

Made of steel, hardened and lapped spherical on ends with a radius of one-half length of rod. Handles are rubber, two-thirds length of rod, and guard against any expansion due to change in temperature when held in the hands, thereby maintaining their accuracy under adverse conditions. The one inch is in the form of a round disc, as shown in illustration.

2 to 6 in. are $\frac{1}{4}$ in. diameter with handles $\frac{1}{8}$ in. diameter.

6 to 12 in. are $\frac{3}{8}$ in. diameter with handles $\frac{1}{2}$ in. diameter.

No. 124 Inside Micrometer

Designed for internal measurements, such as measuring cylinders, rings; also for setting calipers, comparing gauges, etc. It is also useful in measuring parallel surfaces. Micrometer screw in head has $\frac{1}{2}$ in. movement in sets A and B, 1 in. in set C, and, by means of extension rods furnished, sizes as given below for each set can be obtained. Extension rods are provided with a collar.

against which rods are conveniently and accurately set in micrometer head. Contact surfaces are all hardened, and provision is made for adjustment, to compensate for wear of the screw and contact surfaces.

Set A has 6 rods and one $\frac{1}{2}$ -inch gauge, and measures from 2 inches to 8 inches.

Set B has 10 rods and one $\frac{1}{2}$ -inch gauge, and measures from 2 inches to 12 inches.

Set C has 4 rods and one 1-inch and two 2-inch gauges, and measures from 8 inches to 32 inches.

Set D comprises sets A and C, and measures from 2 inches to 32 inches.

No. 206 Micrometer Stand

Where frequent reference is to be made to a micrometer that is set at a given size, or a number of pieces must be made the same size, it is often more convenient to bring the work to the micrometer than the micrometer to the work. This stand will be found very convenient for such conditions, holding micrometer securely and allowing both hands free.

Price each.....\$2.00

Starrett's Tools

No. 14 Double Steel Square

With Hardened Head and Blade

No 14

A double solid steel square, with a 2½-inch sliding scale; especially designed for fine tool-makers. Rule is narrow and instantly adjusted to any length, permitting its use where it would be impossible to use any square with a fixed blade. Scale is graduated on one side only, in 32ds and 64ths. An extra bevel blade with a hexagon and octagon angle is made to fit this stock; also a very narrow blade about ¼ inch wide, used by diemakers for squaring small holes.

No. 14A Square.....\$2.00
No. 14B Square with either bevel or narrow blade... 2.24
No. 14C Square, complete..... 2.48
No. 14C furnished unless otherwise ordered.

No. 60 "Reliable" Try Square

Graduated Blade, Not Hardened

The blade is not riveted or soldered to the stock, but is firmly held by patent bolt and nut by means of which the tool can be readily taken apart.

Length of blade, in.....	4	5	6	9	12

No. 425 Pocket Slide Calipers
Graduated in 32ds and 64ths

Price, Each

3-inch.....	\$1.60
5-inch.....	2.40

Also made graduated to 32ds on stock and 100ths on slide at same price. No. 425A.

No. 424 Slide Rule Caliper and Circumference Gauge

This gauge has a double function, being graduated to read circumference as well as diameter of thing measured, relation of circumference to diameter being shown by graduations on upper corners of rule (capacity 3½ inches, about 11 inches circumference). The jaws are 1½ inches deep and will caliper a cylinder to 2½ inches in diameter. Rule is graduated in 32ds standard and 16ths circumference measure. Circumference measure assists in calculating how many feet a minute cutting tool in a lathe is doing on any diameter within scope of gauge, and helps determine whether the tools should have a faster or slower speed. Price, each.....\$2.40

No. 28 Micrometer Caliper Square
For Outside and Inside Measure

This instrument enables one to enlarge or decrease work one or more thousandths from that calipered, and fills the bill for both a first-class caliper square and micrometer of large scope and quick adjustment. Jaws are 1½ inches long and open 4 inches. One side of beam is graduated in 64ths, the other in 40ths; either side may be used as a common caliper square, or, thru micrometer, to show 1,000ths full length, on either inside or outside work.

4-inch, with case.....	\$ 7.00	without, \$ 5.40

Sent with case unless otherwise ordered.

No. 122 Vernier Calipers

Graduated for outside and inside measure, and warranted accurate. Points are placed on beams and slides for setting dividers to transfer distances and full directions for using the Vernier are sent with each caliper.

Jaws are carefully hardened and accurately ground. We can furnish a quarter inch cylindrical plug standard for testing the adjustment of the caliper when desired. Price, \$2.55.

Furnished in finely finished, plush lined, wooden case. Graduated on the front to read by means of the Vernier 1,000ths of an inch. Graduated in 64ths on the back.

Starrett's Tools

No. 12 Improved Bevel Protractor With Hardened Blade

An adjustable rule, held firmly at any point by a thumb nut, passes through a revolving turret, graduated in degrees from 0 to 90, both right and left, and can be accurately adjusted to show any angle. A valuable auxiliary is made in the shape of a small level attached to head, forming an adjustable level to show any degree, thus greatly increasing the usefulness of the instrument.

Blades are the same as those used on the No. 11 squares. Head is 7 inches long.

Blades with No. 4 graduations furnished unless otherwise ordered.

Length of blade, inches	9	12	18	24
Price each	\$2.05	\$2.25	\$2.65	\$3.00
Protractor head only with level attachment	\$1.50			

No. 490 New Bevel Protractor With Reversible Hood and Hardened Blade.

Same general design as No. 12 with added feature of having head extend both sides of blade, thus the same angles may be transferred from either side of frame without resetting. Turret is graduated to read both ways from 0 to 180 degrees, enabling readings to be made from turret, indicating supplement of angle, as well as angle required. One zero line on frame shows clearly whether acute or obtuse angles are obtained. Head is 7 inches long, but will fit blades of Nos. 11 and 23 Combination Squares and Sets. Blades with No. 4 graduations furnished unless otherwise ordered.

Length of blade, inches	9	12	18	24
Price each	\$2.65	\$2.80	\$3.40	\$3.75
Protractor head only, with level	\$1.85			

No. 492 Bevel Protractor

Same as No. 12, except that head is made with smooth finish to match finish of No. 33 Combination Square; turret is graduated to read both ways from 0 to 180 degrees.

Length of blade, inches	9	12	18	24
Price each	\$2.25	\$2.45	\$3.00	\$3.40
Protractor head only, with level	\$1.50			

No. 9 Combination Set With Hardened Blade

Same as a combination square with the addition of a protractor head, making possible greater variety of uses in laying out and testing work than is possible with any other instrument used by the mechanic. Illustration shows Combination Square No. 11 with Center Head and 7 inch Bevel Protractor No. 12, all on a No. 11 square scale.

Length of blade, inches	9	12	18	24
Price each	\$2.67	2.84	3.39	3.74

No. 433 New Combination Set—With Hardened Blade

Set consists of No. 33 Combination Square with hardened drop forged stock and Center Head and No. 492 Protractor Head. Blades with No. 4 graduations furnished unless otherwise ordered.

Length of blade, inches	9	12	18	24
Price each	\$3.56	\$3.75	\$4.31	\$4.69

No. 434 New Combination Set—With Hardened Blade

Set consists of No. 33 Combination Square with hardened drop forged stock and Center Head and No. 490 Protractor Head. Blades with No. 4 graduations furnished unless otherwise ordered.

Length of blade, inches	9	12	18	24
Price each	\$3.94	\$4.13	\$4.69	\$5.06

No. 13 Patent Double Square—With Hardened Blade

A very practical tool for machinists and fine tool makers. Sliding scale, shortened or extended full length makes it more valuable than a full set of common squares. Blades are furnished with No. 1, 2, 4, 7 and 16 graduations; No. 4 being

furnished unless otherwise ordered. An extra bevel blade with a hexagon and octagon angle is made to fit the 4 and 6 inch sizes. The 6, 9 and 12 inch sizes are furnished with a level in the stock.

Length, inches	4	6	9	12
Price each	\$1.00	\$1.60	\$2.40	\$3.20
Price with extra bevel	\$1.32	\$2.00
Bevel blade with 4 and 6 inch furnished unless otherwise ordered.				

No. 13G Double Square

Same as No. 13 except that one side of stock is grooved, making tool convenient for use on round work without impairing its value for ordinary purposes.

Length, inches	4	6	9	12
Price each	\$1.20	\$1.88	\$2.80	\$3.60
Price with extra bevel	\$1.52	\$2.28

No. 21 Thin Steel Try Square—For Machinists and Draughtsmen

Starrett's Tools

No. 105 Patent Key Seat Rule

The key seat rule is an improvement over the ordinary type in that the machinist's scale is used as part of the key seat rule. This is made possible by a device which holds two straight edges together in

the form of a box square. One of these rules is a plain straight edge, the other rule with which machinist ordinarily works. Two edges forming box square when applied to surface of cylindrical piece keep graduated edge of rule in a line parallel with axis.

The steel auxiliary with straight edge is either plain or graduated in 32ds, and 64ths, as desired, and sent when ordered. Unless otherwise ordered the key seat rule is sent without auxiliary straight edges.

No. 105A. 6-inch, each	\$2.25
No. 105B. 6-inch, with auxiliary straight edge, plain, ea	2.75
No. 105C. 6-inch, with auxiliary straight edge, graduated, each	3.00
No. 105D. 9-inch, each	3.00
No. 105E. 9-inch, with auxiliary straight edge, plain, ea	3.75
No. 105F. 9-inch, with auxiliary straight edge, graduated, each	4.25

No. 298 Key Seat Clamp

Designed to transform any common steel scale into a Key Seat Rule. They are made from steel, case hardened and ground accurate. A pair weighs but one ounce. They can be put on or off almost instantly. May be used with combination square blades or with any straight rule. Price, per pair

Price, per pair \$0.60

Starrett's No. 299 Rule Clamps

Used for clamping two steel rules together, end to end, making one long rule. The rules to be clamped may be either the same or different widths, up to 1 1/4 inches. This clamp will be of special value to mechanics, whose tool chests will usually not hold rules longer than 12 inches.

Price, each \$0.50

No. 11 Patent Combination Square

With Hardened Blade

This tool facilitates work on the part of the mechanic, being the combination of a rule, square, mitre, depth gauge, height gauge, level and center head.

4-inch, without center head or level	\$0.75
4-inch, with center head	\$1.50 without, 1.00
9-inch, with center head	1.75 without, 1.25
12-inch, with center head	2.00 without, 1.50
18-inch, with center head	2.75 without, 2.25
24-inch, with center head	3.25 without, 2.75

The 6, 9, 12, 18 and 24-inch have levels (in their stocks) and center heads, and will be sent complete unless otherwise ordered. The 18 and 24-inch have same stock as 12-inch. The blades are graduated in No. 4, No. 1, No. 2 and No. 7 graduations. Those of No. 4 graduation being most used, will be sent unless otherwise ordered.

No. 23 Combination Square

For Carpenters and Machinists

The same in design as No. 11, but, while the blade is made from good, hard steel, it is not hardened. Made with No. 4 graduations only.

6-inch, with center head	\$1.50 without, \$1.00
9-inch, with center head	1.75 without, 1.25
12-inch, with center head	2.00 without, 1.50

No. 11-S Combination Square

This tool is the same as No. 11 Combination Square, except that it is furnished with blades graduated the same as shrink rules, and intended for the use of pattern makers. Made with No. 4 graduations only and in 1/8 and 1/16 inch shrinkage to the foot.

Price each, 12-inch blade with center head	\$2.50
Price each, 12-inch blade without center head	2.00
Price each, 12-inch blade only	1.75

Blades are made in No. 4 graduation, either 1/8 or 1/16 inch shrinkage, and will fit all Starrett's Combination Squares and sets; also all bevel protractors. Sent with centerhead and 1/8-inch shrinkage unless otherwise ordered.

No. 33 Combination Square

Drop Forged Steel

With Hardened Head and Blade

This square is the same as No. 11, except that it is made of drop forged steel and has hardened head as well as blade.

Size, inches	6	9	12	18	24
With center head	\$2.50	\$2.75	\$3.00	\$3.75	\$4.25
Without center head	2.00	2.25	2.50	3.25	3.75

Combination Square Attachment

This attachment, with a second blade or rule, can be clamped at any point on a square, so that lines may be drawn parallel to head, and when combined with center head is convenient in scribing parallel chords on the ends of cylindrical work.

Made to fit 12, 18 and 24-inch blades of Nos. 11, 23 and 33 squares. Can be used with any regular rule as wide as 1 1/4 inch or with flat steel square No. 21, in laying key seats, etc.

Price each \$0.80

No. 17 Large Combination Square

With Hardened Blade

Same as No. 11, except that the parts are slightly larger thereby increasing its efficiency.

18-in. blade, 1 1/4 in. wide, 3/32 in. thick; 6-in. stock with 4-in. mitre. With center head	\$4.25
Without center head	3.25
24-in. blade, 1 1/4 in. wide, 3/32 in. thick; 6-in. stock with 4-in. mitre. With center head	4.25
Without center head	3.25

Furnished with center head unless otherwise ordered.

No. 8 Special Standard Square

With Hardened Blade

This square is similar to No. 11, but is larger and heavier. Designed for use of manufacturers who desire to keep a reliable standard.

18-in. blade, 1 1/2 in. wide, 1/10 in. thick; 8 1/4-in. stock with 5-in. mitre. Without center head	\$5.00
24-in. blade, 1 1/2 in. wide, 1/10 in. thick; 8 1/4-in. stock with 5-in. mitre. Without center head	6.00
Center head only, for either size	1.00

Starrett's Tools

Screw Pitch Gauges

No. 40 Improved

Free end of leaf is made narrow, permitting it to be inserted in a small nut, that either outside or inside threads may be compared.

This gauge has twenty-two pitches, viz: 9, 10, 11, 11½, 12, 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, 30, 32, 34, 36, 38 and 40.

Price each \$1.00

No. 4 Screw Pitch Gauge

24 Pitches, 4 to 30

Has the following pitches: 4, 4½, 5, 5½, 6, 7, 8, 9, 10, 11, 11½, 12, 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, 30. Like No. 40 it can be used inside of a nut as well as on outside of a screw or bolt. It is also a convenient and reliable tool to use as a 60-degree center gauge and gauge to test the grinding of either an inside or outside threading tool.

Price each \$1.25

No. 5 Screw Pitch Gauge

26 Pitches, 32 to 82

Of the same form as No. 40, for inside and outside work. Has the following pitches: 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82.

Price each \$1.25

No. 6 Screw Pitch Gauge

30 Pitches, 4 to 42

Of the same form as No. 4. Has the following pitches: 4, 4½, 5, 5½, 6, 7, 8, 9, 10, 11, 11½, 12, 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, 30, 32, 34, 36, 38, 40, 42. Price each \$1.50

No. 155 Screw Pitch Gauge

U. S. Standard

No. 155 has 25 pitches viz: 2½, 2¾, 3, 3½, 3¾, 4, 4½, 5, 5½, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 18, 20. Also a center gauge with coarse and fine notch. Price each \$1.50

No. 178 Fillet or Radius Gauge

A concave and convex gauge, especially adapted for use in laying out special forming tools, dies, etc., as well as for measuring fillets. For use machinists and tool makers as well as pattern makers.

Size A has 30 leaves stamped to indicate radii by 64ths, from ¼ in. to ½ in. (one-half diametric size). Diameters are from ½ in. to 1 in., varying by 32ds.

Size B is made with 32 leaves stamped to indicate radii by 64ths, from ¼ in. to ½ in. Diameters are from ½ in. to 1 in., varying by 32ds.

No. 178A. Price each \$1.00

No. 178B. Price each 1.50

No. 72 Thickness Gauge or "Feeler"

This gauge has 22 leaves, varying in thickness by thousandths, running from .004 to .025. The thickness of each leaf is designated by the number upon it. Each leaf may be used singly or in combination with others, and any thickness in thousandths within their limits may be quickly obtained. The leaves fold within the case, which is 2¼ inches long.

Price each \$1.50

No. 172 Thickness Gauge

Size A has nine leaves, viz., .0015, .002, .003, .004, .006, .008, .010, .012 and .015. Sizes B and C have eight leaves the same as A with the omission of .0015. Leaves are tempered and have thickness marked upon them. Size A is made with either straight leaves as shown, or with tapering leaves. Sizes B and C are made with tapering leaves only.

No. 172A. Size 2¾ x 1½ inches \$1.00

No. 172B. Size 4¾ x 1½ inches 1.50

No. 172C. Size 6¼ x 1½ inches 2.00

(Size A will be sent unless otherwise ordered.)

No. 245 Taper, Wire and Thickness Gauge

Taper gauge shows thickness in 64ths to 16ths of an inch on one side, and reverse side is graduated as a rule three inches of its length, reading in 8ths and 16ths of an inch.

Wire gauge, English standard, shows on one side sizes numbered from 19 to 36, with two extra slots, one ½, the other ¼ of an inch, and on reverse side the decimal equivalents expressed in thousandths.

This gauge has also 9 thickness or feeler gauge leaves, approximately 4 inches long, of the following thicknesses: .002, .003, .004, .006, .008, .010, .012, .015 and ¼th of an inch.

Price each \$4.00

Starrett's No. 45 Depth Gauge

The wire in this gauge is held to a groove by a friction spring inside the nut while adjusting, and may be used close to the end, as well as in the middle of the straight edge.

By loosening the nut, the gauge may be neatly folded.

Price each

Starrett's Tools

Depth Gauge

Has in place of the round wire to slide in the groove, as shown with No. 45, a 4-inch or 6-inch scale, $\frac{1}{16}$ -inch wide, graduated in either 32ds and 64ths, 50ths and 100ths, or 64ths and 100ths, indicating exact measurements, and may be used separately from the gauge.

	Price Each
45A with 3 1/2" stock and 4" scale.....	\$1.25
45B " 3 1/2" " " 6 "	1.50
45C " 6 " " 4 "	1.50
45D " 6 " " 6 "	1.75
45E " 10 " " 6 "	2.25

No. 237. Depth Gauge

The head of this gauge is case-hardened; 2 inches wide across base, $\frac{1}{4}$ -inch thick.

Blade which is conveniently held in groove of head by a knurled lock nut, is a 6 inch narrow spring-tempered rule. Blades graduated in 32ds and 64ths of an inch will be sent unless otherwise ordered, but can also supply them graduated in 50ths and 100ths, or 64ths and 100ths.

Price\$1.25

No. 446. Micrometer Depth Gauge

Designed for measuring depth of grooves, holes or irregular parts. Has $\frac{1}{2}$ -inch movement of screw, reading in thousandths; and with two $\frac{1}{2}$ -inch and one 1-inch standard collars to slip off or on spindle, 2 1/2 inches, reading in thousandths, can be obtained. Head is about $\frac{1}{16}$ -inch thick; this and the point of measuring rod are hardened.

Head carries with it a knurled set screw for locking spindle to prevent changing after being set.

No. 446A. 2 1/2-in. base, with case, \$6.00, without \$5.50
No. 446B. 4 -in. base, with case, 6.75, without 6.00

No. 447. Height Gauge Attachment

A steel base for holding inside micrometer No. 124, sets A and B, for use as a height gauge. Anvil end is even with bottom of base and micrometer is held perpendicularly, forming a reliable gauge. A slight turn of knurled screw instantly clamps it or releases it from base.

Price, attachment only..... \$1.75

Tool Makers' Parallel Clamps

No.	161-AA.	Jaw opening	1/4"	lgth.	Jaw 1 1/2"	Per pair

No. 160. Tool-Makers' Steel Clamps

Made from drop forgings, case-hardened, have take-up blocks to slip on and off end of screw, and are held to same in a novel manner. Will hold work square and parallel for laying out on surface plates, fitting or drilling. A round piece may be rigidly held in two clamps and drilled on an upright, central and parallel. With small block in use, capacity of smaller clamps is a little over one inch, and that of larger clamp two inches.

Price per pair, 1 inch.....\$2.00
" " 2 ".....2.50

No. 268. Drill Blocks and Clamps

Clamp will hold a round piece up to 1 1/2 inch diameter firmly in groove of Blocks, for prick punching, drilling or laying out a series of holes before and while being drilled.

Drill blocks are furnished in pairs. Size of each is 2 inches x 1 1/2 inch.

No. 268A. Two Drill Blocks, \$1.00
No. 268B. Clamp50

No. 268C. Set, complete..... 1.50
No. 268D. one Clamp and two Drill Blocks, sent unless otherwise ordered.

"Little Giant" Jack Screws

Designed for tool-room use, leveling up work on a planer-bed or under an upright drill, setting up machinery, etc. All parts are case-hardened.

No. 190. Jack (A) is 1 1/2 inch diameter at base and has a range from 2 1/4 to 2 3/4 inches. Will raise 1,000 pounds or more. Two extension bases (B and C) are made to fit the base of main part (A) and are 2 and 1 inch high respectively. An auxiliary pointed screw (D) is supplied to be used in place of screw with swivel cap in certain places where it may be preferable. Base (E) is also provided, for use in cases where such a shape may be desirable.

No. 191. A smaller size, 1 inch diameter. Part A, 1 1/2 inch high; B, 1 inch; and C, 1/2 inch. Prices are for either No. 190 or 191.

No. 196 Universal Dial Test Indicator

Simple, reliable, easily read and very sensitive. Slightest pressure upon contact point produces a movement of hand on dial. Circumference of dial divided into 100 equal spaces, each representing a movement of contact point of one-thousandth of an inch. One revolution of hand therefore indicates 1-10 inch, capacity of instrument being two-tenths. By bringing contact point against work with just enough pressure to give hand one full turn, then setting it at 0, an opportunity is given for one full revolution of hand to both right and left of 0, showing a rise or drop in work and amount of variation. A most valuable feature is adjustable dial. By turning knurled rim dial may be instantly moved to bring 0 mark to any point desired in relation to hand. Each indicator is fitted with three hardened contact points for different classes of work. Special tool post and sleeve are useful in lathe work. For general work indicator with sleeve B is adapted for use with our 9 inch or 12 inch surface gauges.

Clamp G permits attaching indicator to large lathe and planer tools, milling arbors, etc.

Attachment F more than doubles the value of indicator, adapting it for use inside of holes, to reach over blockings on face plates, etc.

No. 196A	Indicator with all attachments, as shown	\$10.75
No. 196B	Indicator only, with 3 contact points	7.00
No. 196F	Hole attachment	1.50
No. 196G	Clamp	.75

No. 196K	Sleeve	.75
	Extra contact points, each	.10

No. 196A, Indicator complete, will be sent unless otherwise ordered.

No. 64 Universal Test Indicator

May be used to test and show imperfections or truth of inside, outside or surface work. Can be instantly attached to spindle or needle of any surface gauge and used in connection with same to show the slightest variation in thousandths. May be clamped to flat or round support, varying in size from a surface gauge needle up to $\frac{3}{8}$ -inch, flat or round.

Indicator only	\$2.50
Tool-Post Holder, without arm	.75
Tool-Post Holder, with arm	1.00
Indicator, with Tool-Post Holder and arm, complete	3.50

Sent complete unless otherwise ordered. This indicator may be attached to No. 56, 57 or 257 Surface Gauge.

No. 65 Center Tester

This instrument was designed to use in adjusting and locating centrally any point or hole in a piece of work operated upon in a lathe chuck or on a face-plate; also to test the truth of lathe centers, or a shaft between the centers, the instrument being held in the tool post.

Price, each \$3.50

No. 56 Tool-Makers' Universal Surface Gauge

This gauge is adapted for light work. The base is steel, case hardened, with depressions milled in the sides for the thumb and finger to grasp. A V-shaped groove in the end and bottom adapts it for use on cylindrical work. An auxiliary guide piece is furnished to clamp to the base.

No. 56A, with 4-inch spindle and auxiliary guide, price	\$3.00
No. 56B, without auxiliary guide, price	2.50

Sent with guide unless otherwise ordered. A 7-inch spindle is furnished when ordered at an extra cost of 20 cents.

No. 57 New Universal Surface Gauge

Has heavy base, grooved thru the bottom and end, adapting it for use on or against circular work as well as flat surfaces.

In the rear end of the base are two gauge pins frictionally held which may be pushed down to bear against the edge of a surface plate or in the slot of a planer bed for linear work. For small work the spindle may be removed and the scriber inserted in hole provided where it can be sensitively adjusted and used to advantage on bench work.

An extra long spindle which may be quickly substituted for the regular will be sent with the gauge when ordered.

No. 57A	3 inch base with 9 inch spindle	\$2.50
No. 57B	3 " " " 9 and 12 inch spindles	2.55
No. 57C	3 $\frac{1}{2}$ " " " 12 inch spindle	3.00
No. 57D	3 $\frac{3}{4}$ " " " 12 and 18 inch spindles	3.50

Write for special circulars on waste.

Starrett's Tools

No. 257 Universal Surface Gauge

Spindle may be set upright or at any angle, or turned so as to work under base. Can be sensitively adjusted to any position. Snug and head carrying scriber are so made that when clamp nut is loosened all may be freely moved to any position, and by friction springs, retained in place until a slight turn of clamp nut holds them firmly.

In base are four gauge pins, frictionally held, which may be pushed to bear against edge of a surface plate, or in slot of a planer bed for linear work.

Special attention is called to the four gauge pins in corners of base, which adapt it to be used as a locomotive guide liner and make it more convenient than other gauges for many uses.

No. 257A.	3-inch base, with 9-inch spindle.....	\$3.50
No. 257B.	3-inch base, with 9 and 12-inch spindles.....	\$3.85
No. 257C.	3½-inch base, with 12-inch spindle.....	4.00
No. 257D.	3½-inch base, with 12 and 18-inch spindles.....	4.50

No. 29 Scratch Gauge

For scribing lines parallel to a given surface, scratch gauge is used if distance is not too great and if line is to be scribed on a surface nearly at right angles with a given surface. Beam is graduated 50ths, or 64ths of an inch.

5-inch (beam ½-inch) graduated.....\$1.00 Not graduated.....\$0.65
6-inch (beam ¾-inch) graduated.....1.25 Not graduated......75

Unless otherwise ordered, we shall send those graduated in 64ths.

Two extra cutters will be sent with each gauge, fastened to the case.

No. 67 Improved Scriber

Length, with short bent point, 9 inches; with long point, 12 inches. All parts are interchangeable. The knurled sleeve is nickled.

Price complete.....	\$0.50
Price without long point.....	.35
Straight point, long or short bent point, each.....	.10
Long bent point, each.....	.15

The tool will be sent complete unless otherwise ordered.

No. 68 Improved Adjustable Sleeve Scriber

Made in two lengths, 8 inches and 12 inches. Tool makers will find the small size more desirable for general use, and the large one for heavier work. For pattern makers a knife scriber, made of a fine grade of steel, is supplied as an auxiliary.

Price each, either size, without knife point.....\$0.50
Knife point, extra......15
Extra scriber points, each......15

The 8-inch, being the more popular size, will be sent (without knife point) unless otherwise ordered.

No. 70 Pocket Scriber

This tool is made from steel tubing, knurled and nickel plated. The scriber is reversible, telescoping into the stock, and is held by a slight turn of the chuck so that it is always as safe to carry in the pocket as a penknife.

No. 70A.	Handle ¼-inch diameter.	Price each.....	\$0.25

Starrett's Speed Indicators

No. 104 High Speed

This indicator may run at highest speed required without heating, and this is on account of our frictionless bearing, against which the inner end of the spindle revolves. The working parts of this instrument are encased, and the dial plate has two rows of figures, reading right or left, as the shaft may run.

Price each.....\$1.00

Price each in leatherette case.... 1.50

We supply the indicators with a spindle 7½ inches long for use on dairy machines, etc., for 65 cents extra. The indicator in pasteboard box (price \$1.00) will be sent unless otherwise ordered.

No. 106 "Improved"

The graduations show every revolution, and with two rows of figures read both right and left, as the shaft may run. The instrument is nickel-plated and has a rosewood handle.

Price each, in pasteboard box.....\$1.50

Price each, in leatherette case..... 2.00

Sent in pasteboard box unless otherwise ordered.

No. 107 "Registering"

This instrument was devised to automatically register hundreds as well as units and tens, and thus relieve the mind from keeping tally. Will register 5,000 revolutions.

Price each, in pasteboard box....\$3.00

Price each, in leatherette case... 3.50

Sent in pasteboard box unless otherwise ordered.

Rubber Tips

Indicators listed above are supplied with two rubber tips for pointed and hollow centers, as shown in illustrations.

Surface Speed Attachment for Speed Indicators

Attachment

Showing Applied

This attachment can be applied to any of the speed indicators listed above, and when so applied will show the number of lineal feet per minute the periphery of a shaft is running, and thus enable a workman to know whether the speed is too slow or too fast to get the most work the tool will stand. A close approach to accuracy is not claimed for this attachment, but it is very convenient and adequate for the purpose intended.

Price each.....\$0.50

Starrett's Tools

No. 185 Time Saver Drill, Tap, and Steel Wire Gauge

By the use of this gauge one is enabled to select at once the right sized drill to suit machine screw tap most commonly used, leaving just stock enough for the tap to cut as near a full thread as is practicable for one tap without breaking it, thus saving much time and uncertainty of result attending the former crude ways of making a selection.

Price each.....\$2.00

No. 133 Engineers' and Plumbers' Levels

An adjustable, incline level, a fixed level, and a plumb. The hinged tube inside the working faces of the frame, carrying a level glass, is adjustable to the graduated scale, and shows any incline by 32ds (or less) to 2 inches to the foot without interfering in the least with the plumb or level.

Nos. 97 and 98 Improved Levels for Testing Shafting, Etc.

In addition to the regular parallel vial, the bases have a cross level which enables one to place or hold the base on a shaft level in its cross section, not canted sidewise; for the shape of a level glass is such that, though true as adjusted on a flat surface, it will not be reliable when canted sidewise. Hence the value of the cross level, not only to test the truth of shafting, but other surfaces which tend to throw the level base into a canting position.

No. 97

Starrett's Tools

No. 88 Ball Points

For Use with Starrett's No. 85 or No. 90 Dividers and No. 51, No. 58 and No. 59 Trammels

This attachment consists of four balls, of 1 1/2-inch, 1-inch, 3/4-inch, and 1/2-inch diameter respectively, and a holder which fits either divider leg or trammel head. It is used to form a seat for the divider leg in describing circles around a hole.

Prices

Complete, 4 Balls and Holder.....\$1.25
Either Ball or Holder..... .25
In ordering this set for use with trammels, please give tool number of the trammel so that the proper holder may be sent.

Improved Trammel Points No. 50 Nickel Plated

Made of bronze metal with forged steel points, hardened.

Either point can be removed, and pencil socket accompanying each pair put in its place.

Adjustable like spring dividers. Light and durable.

With 3-inch points, adjustable.....\$2.50

With 3-inch points, not adjustable.....1.50

Extra long points, 5-inch, per set......35

New Trammels

four ball points with holder, which enable one to scribe a circle from the center of any hole up to 1 1/2 inches and under.

No. 59A Trammel Heads (with one pair of points).....\$2.00

No. 59B Balls and Holder, per set.....1.25

No. 59C Small Caliper Legs, per pair......50

No. 59D Large......75

No. 59E Large Divider Points, " "......50

No. 59F Set Complete.....4.75

Trammel heads with one pair of points, No. 59A, will be sent unless otherwise ordered.

Extension Beam Trammels

Nickel Plated

Have opening through the underside to accommodate the extension, giving width and stiffness in proportion to the length required for large work, while it is equally well adapted to receive a narrow beam for light work.

No. 51A Price complete.....\$3.25

No. 51B Without caliper legs.....2.50

Sent complete, No. 51A, unless otherwise ordered.

No. 18 Automatic Adjustable Stroke Center Punch

This center punch contains a mechanism which automatically strikes a blow of any required force when punched in exact position desired by operator. For work requiring a heavy blow, turn cap up; for a light mark, turn down.

No. 18AA 3 3/4 x 3 1/8 inch.....\$1.50

No. 18A 5 x 3 1/2 inch.....2.00

No. 18B 6 x 3 3/8 inch.....2.50

Extra points, each......10

Unless otherwise ordered, Size A will be furnished.

No. 117 Machinists' Center Punches

Length of each size 4 inches. Diameter, A 5/64 inch, B 3/32 inch, C 9/64 inch, D 5/32 inch.

A larger size, E, is made for heavy work; length 4 inches, diameter 1/4 inch, diameter of knurled part 3/4 inch.

Per dozen.....\$4.00

Each......30

Per dozen, assorted A, B and C, in round wooden box.....2.50

Sent in round box only when so ordered.

No. 118 Spacing Center Punch

A Combination Prick Punch and Spacing Tool, used for laying out work quickly and accurately—for drilling, cutting out dies, etc. The prick punch is solid—made from best tool steel, properly tempered.

No. 118 Price, each.....75

No. 116 Nail Sets

Made of fine grade steel both ends hardened.

Length of all sizes, 4 inches. Four sizes 1/8 to 3/4.

Per dozen.....\$1.00

Net each......30

Doz. in box.....1.35

No. 176 Extra Heavy Nail Sets

No. 176A 5 x 1 1/2 x 7/8 inch at point. Per doz.....\$1.40

Spring Tempered Rules

With Graduated End

Without Graduated End

Number	300	301	302	306	307	308	309
Graduation No.	4	1	2	6	7	15	16

With Graduated End

No. 303 has No. 4 graduations and is graduated in 32nds on each side of one end. Made in 2 to 48 inch lengths.

Without Graduated Ends and with One Beveled Edge

No. 400 has No. 4 graduations with 64ths on beveled edge. No. 407 has No. 7 graduations with 100ths on beveled edge.

With Graduated Ends and with One Beveled Edge

No. 403 has No. 4 graduations with 64ths on beveled edge and 32nds on opposite sides of one end. Made in 2 to 48 inch lengths.

With and Without Graduated Ends

Designed to assist the user to quickly read in the 64ths. No. 600 has No. 4 graduations, which consist of 8ths and 16ths on one side and 32nds and 64ths on the other. Made in 1 to 24 inch lengths. No. 603 has No. 4 graduations and is graduated in 32nds on both ends of one side. Made in 2 to 24 inch lengths.

Heavy, Without End Graduations About 1-10 inch thick

Made in 6, 9, 12, 18, 24, 36, 48, 60 and 72 in. lengths. No. 410 with No. 4 graduations. No. 417 with No. 7 graduations. The 60 and 72 inch lengths made in No. 410 style only.

Flexible Rules

Made of very thin spring tempered steel, graduated on one side only. The 1 to 12 inch sizes are $\frac{1}{8}$ inch wide and will conform to a 2 inch circle 18 to 48 inch lengths are $\frac{1}{4}$ inch wide.

Number of rule	320	321	322	323	324
No. of graduations	10	11	12	13	14

Made in 1 to 48 inch lengths only.

Semi-Flexible Rules

These rules are about 1/40th inch thick, heavier than the flexible and lighter than the spring tempered rules; and are the same widths as the corresponding lengths of spring tempered rules.

No. 325 has No. 4 graduations, and graduated in 32nds on both sides of one end. Made in 2 to 12 inch lengths.

Prices of All Foregoing Rules

Length, inches	1	2	3	4	6	9	12

No. of graduation	10	11	12	

Steel Shrink Rules

These rules are spring-tempered, except No. 372, and are of the same width and thickness as spring-tempered standard rules. 6 inch, each...\$0.75 12 inch, each...\$1.75 24 inch, each...\$3.50

- No. 370. Shrink, $\frac{1}{8}$ to foot, No. 4 graduation.
- No. 371. Shrink, $\frac{1}{8}$ to foot, No. 2 graduation.
- No. 372. Shrink, $\frac{1}{8}$ to foot, Flexible, graduated in 32nds and 64ths.
- No. 373. Shrink and Standard, $\frac{1}{8}$ to foot, No. 4 graduation.
- No. 375. Brass Shrink, $\frac{1}{8}$ to foot, No. 4 graduation.
- No. 376. Brass Shrink, $\frac{1}{8}$ to foot, No. 2 graduation.
- No. 377. Double Shrink, $\frac{1}{8}$ to foot, No. 4 graduation.
- No. 378. Double Shrink, $\frac{1}{8}$ to foot, No. 2 graduation.

No. 465. Hook and Handle Rule

Used by blacksmiths for measuring hot pieces of material, and are convenient in measuring through holes or from the inside when held against a corner, etc.

Made from hard rolled sheet brass $\frac{1}{16}$ inch thick, $\frac{1}{8}$ inch wide, with heavy graduations and figures, graduated from end in $\frac{1}{16}$ inch on one side and from inside of hook in 16ths of an inch on the other, which enables taking measurements either hook or from outside edge. Graduated 12 inches and measures over all 16 $\frac{1}{4}$ inches. Price each...\$1.15

Improved Hook Rules

Very convenient in taking measurements from round corners, through hubs of pulleys, setting inside calipers, etc. The 6 inch may be carried in pocket. Hook can be quickly removed by turning eccentric stud one half round.

No. 419. Is a No. 303 rule, No. 4 graduation, with hook and with end graduation.							
No. 420. Is a No. 300 rule, No. 4 graduation, with hook.							
No. 421. Is a No. 410 rule, No. 4 graduation, with hook.							
The hooks can be applied to rules of other graduations when ordered. Prices same as below.							
Length, inches	6	9	12	18	24	36	
Price, each	\$1.00	1.40	1.75	2.50	3.00	5.75	

Starrett's Tools

Narrow Hook Rules

For taking measurements through small holes where regular hook rules cannot be used. Can also be used for setting inside calipers, etc. Measurements through holes as small as $\frac{1}{8}$ inch can be obtained. Graduated one side in 32nds and the other in 64ths of an inch.

No. 442, No. 330 rule, with hook.
Length, inches 4 6 9 12
Price, each \$0.75 \$0.90 \$1.25 \$1.50
These hooks can be applied to other narrow rules of different graduations.

Rules with Thumb Slide

Useful in measuring against a shoulder, width of flanges, collars, etc. Slide may be used on either edge of rule, or removed and rule used alone.
6 inches long, about $\frac{1}{8}$ inch wide and $\frac{1}{16}$ inch thick.
No. of Rule 290 291 292 297
No. of Graduation 4 1 2 7
Price each \$1.25

No. 296 Slide Caliper Rule

Consists of a hook rule having an adjustable slide so that work may be placed between the two contact edges and reading made. 4 inches long, about $\frac{1}{8}$ inch wide and $\frac{1}{16}$ of an inch thick. Graduations are No. 4, with 32nds and 64ths on front as shown, and 8ths and 16ths on back. Thumb piece slides in a groove on reverse side as shown in No. 290 above. Jaws are $\frac{1}{2}$ inch deep.
Price each \$1.50

No. 460 Blacksmiths' Rule

Made of spring tempered steel, 2 feet long, $\frac{1}{4}$ inches wide, with 12 inch joints. Graduated in 8ths on one side and 16ths on the other. Price each \$0.50
No. 461 same as No. 460 except that it has stop joint.
Price each \$0.75

No. 462 Folding Brass Rule

Made of hard brass with stop joints, otherwise the same as No. 460. Price each \$0.75

No. 450 Folding Steel Pocket Rule

Made of Spring Tempered Steel

1 foot long, $\frac{3}{8}$ inch wide 4 inch joints 3 fold.

Price each \$1.50 2.50 3.50 6.00 10.00 15.00

No. 383 Graduated Steel

Straight Edge

Not beveled. Graduated on one side only, one in 16ths, the other in 8ths of an inch. Same width and thickness as No. 380.

Length, inches 12 18 24 36
Price each \$1.80 \$2.50 \$3.25 \$6.25

No. 387 Beveled Edge—Graduated

Graduated on beveled edge only, in 32nds of inch. Same width and thickness as No. 380.

Length, inches 12 18 24 36
Price each \$2.00 \$3.00 \$4.25 \$7.25

Center Gauge

For use in grinding and setting, screw cutting tools. The angles are 60°, except in Nos. 395 and 396, in which they are 55°.

No. 390. Not tempered, graduated one corner each in 32nds, 24ths, 20ths and 14ths. Price each

No. 391. Spring-tempered. Price each

No. 395. Whitworth, not tempered. Price each

Center Gauge Attachment

This attachment is a V block with a slot above the V, containing a flat spring to frictionally hold center gauge parallel with block. Placing V block against a lathe spindle or face plate, a threading tool can be adjusted to line perfectly to cut both sides of a thread proper angle, for both external and internal work.
Price each

Builders' and Architects' Levels

Builders' Dumpy Level

Is a low priced but reliable and well-made instrument, and will meet all the requirements of the builder, contractor and millwright.

Specifications

Telescope. Length 11½ inches; magnifying power, 18 diameters; achromatic terrestrial of good definition; focused by rack and pinion; eye-piece provided with a screw-like arrangement for precise focusing of cross hairs. Cross Bar. Length, 8 inches; ribbed to increase stability and decrease weight. Level to Cross Bar. Length 5 inches; graduated on the glass. Horizontal Circle. Diameter, 3 inches; graduated to degrees, numbered 0 to 90 each way, with vernier reading to minutes. ish. Telescope, level vial casing and cross bar, cloth finished; other parts bronzed and lacquered. Weight. Instrument, 6 pounds; tripod 6 pounds.

No. 1600. Dumpy Level with tripod, complete.....\$65.00

Architects' Level

Level is of superior quality and workmanship. Highly satisfactory for architects' and contractors' use, and for tile draining, etc., where lines are to be run with stations but a short distance apart.

Specifications

Telescope. Length 11½ inches; magnifying power 18 diameters; achromatic terrestrial of good definition; focused by rack and pinion; eye-piece provided with a screw-like arrangement for precise focusing of cross hairs. Telescope. Length, 5 inches; graduated on glass. Bar. Length, 8 inches; best composition metal. Level to Cross Weys. Provided with a new locking device which securely fastens the clips. Horizontal Circle. Diameter, 3 inches; graduated to degrees, numbered 0 to 90 each way, with vernier reading to 5 minutes. Parallel Plates. Of large diameter, the upper consisting of four well-braced arms; four leveling screws; provided with clamp to spindle. Weight, 5 pounds; tripod, 6 pounds.

No. 6005. Architects' Level with tripod, complete.....\$80.00
No. 6006. Same as No. 6005, but with tangent screw.....\$5.00

Transits

No. 6166

Reconnaissance Transit

Specifications

Telescope. Length, 9 inches; magnifying power, 21 diameters; balanced, and reverses at both ends; line of collimation true for all distances; object slide and eye-piece with dust protectors; fixed stadia hairs. Object Glass. Diameter, 1 inch. Eye-piece. Improved, giving a flat field. Horizontal Axis. Length, 4 inches; cast hollow to reduce weight. Level to Telescope. Length, 4½ inches; graduated on the glass, indicating a variation of 30 seconds of arc to 1/10-inch motion of the bubble. Standards. Phosphor bronze.

Horizontal Circle. Diameter, 5 inches to edge of graduation; graduated on solid silver to half-degrees, with one double vernier reading to single minutes, placed at an angle of 30 degrees to line of sight; marked from 0 to 180 each way.

Compass. Graduated to half-degrees, figured from 0 to 90 on each side of North and South; magnetic needle, 3½ inches, variation plate with vernier and rack and pinion.

Plate Levels. Length, 2 inches; indicating a variation of 1 minute of arc to 1/10-inch motion of the bubble.

Tangent Screws. Phosphor bronze; improved form, with opposing spiral spring.

Parallel Plates. Of large diameter, the upper consisting of four well-braced arms; four leveling screws. Shifting Center. Range of shift, ½-inch.

Finish. Standards, cloth-finished; all other parts bronzed and lacquered.

Weight. Instrument, 10 pounds; tripod, 9 pounds.

Price.....\$212.50

No. 6017

Builders' Transit

Specifications

Telescope. Length, 8 inches; magnifying power, 16 diameters; achromatic terrestrial, of good definition; focused by rack and pinion; eye-piece provided with a screw-like arrangement for precise focusing of cross hairs. Level to Telescope. Length, 4½ inches; graduated on the glass.

Horizontal Circle. Diameter, 5 inches; reads to degrees; graduated on brass, silvered.

Vernier. One, reading to 2 minutes; vernier plate fitted with two spirit levels placed at right angles to each other.

Tangent Screws. Phosphor bronze; improved form, with opposing spiral spring.

Finish. Standards, cloth-finished; all other parts bronzed and lacquered.

Weight. Instrument, 6 pounds; tripod, 6 pounds.

No. 6015. Builders' Transit, with tripod No. 6202, box, etc. Each.....\$155.00

No. 6017. Builders' Transit, like No. 6015, but having compass with raised ring, silvered, graduated to degrees, with variation

ate, needle about 3 inches; tripod No. 6202, box, etc. Each.....\$180.00

No. 6017

No. 6166

It is especially serviceable in the determination of points in a vertical plane above or below the level line, or for the repetition angles.

Students, Drawing Outfit

This outfit consists of everything necessary for the student in high school or manual training courses. In buying a complete outfit of this kind the student is relieved of the trouble of buying each article separately, and at the same time he may rest assured that nothing is omitted. We have arranged two outfits, both of which are the same with the exception of the set of instruments.

The No. 1 Outfit contains a set of German silver instruments as follows: Pocket case, containing compasses, 5 1/4-inch, with pencil point and lengthening bar; dividers, 5 1/4-inch; spring bow pencil, 3 1/4-inch; spring bow pen, 3 1/4-inch; ruling pen, 5-inch, metal handle; key and box.

No. 1

The No. 2 Outfit contains a set of No. 1169 instruments with steel points as follows:

Ruling pen, 4-inch spring blade; ruling pen, 3 1/2-inch spring blade; steel spring bow dividers, 5 1/4-inch metal handle; steel spring bow pencil, 3 1/4-inch metal handle; hair spring dividers, 6-inch; compasses, 6-inch, with fixed needle point, pen, pencil point and lengthening bar; box with leads.

The outfits are as follows, furnished with the set of drawing instruments preferred:

One set German silver drawing instruments; one drawing board, 16x22 inches; one T-square, 24-inch pearwood; one protractor, 4 1/2-inch, brass; one set 12-inch, triangular, boxwood; one triangle, 30x30 8-inch pearwood; one triangle, 45°, 6-inch pearwood; one irregular curve, pearwood; one dozen steel tape 3/8-inch, on card; one drawing pencil, Hyperion, 40; one bottle ink, Dietzgen's Waterproof black; one pencil eraser, Dietzgen's; two sheets tracing cloth, 15x20 inches, Imperial; six sheets drawing paper, 15x20 inches, cream.

Outfit No. 1 complete. Price each \$12.00
Outfit No. 2 complete. Price each \$14.00

The Phillips Slide Rule

No. 1776B. Phillips slide rule, with cube and reciprocal scales, 10-inch, divisions on white ivory, glass frameless indicator, proved automatic adjustment, in case, with book of instructions.

Is of wide range and precision. By an ingenious arrangement of a reciprocal scale, formulas in civil, mechanical and electrical engineering, taking the form $a \times b \div c \times d$ can be solved with one slide movement.

Price each \$12.00

"Reliance" Instruments

German Silver with Steel Points

No. 1169

The "Reliance" instruments are of high quality German silver and English tool steel. They are warranted to give satisfactory service and we recommend them to engineers and professional draftsmen. Cases of Morocco leather, silk velvet lined.

Ruling pen, 4-inch spring blade; ruling pen, 5 1/2-inch spring blade; steel spring bow dividers, 3 1/4-inch metal handle; steel spring bow pencil, 3 1/4-inch metal handle; steel spring bow pen, 3 1/4-inch metal handle; hair spring dividers, 6-inch; compasses, 6-inch, with fixed needle point, pen, pencil point and lengthening bar. Box with leads.

Price per set \$9.50

No. 1169P containing same assortment as No. 1169, but in pocket book case.

Price per set \$11.00

Highest Grade

German Silver and Steel. Silk Velvet Lined Case

No. 1070

This set represents the highest grade and embodies all the latest improvements. Materials used are carefully selected to afford the greatest efficiency in combining strength, durability, elasticity and lightness. Workmanship and finish are perfect.

Cases are of Morocco leather, silk velvet lined, pocket-book style. In pocket book case, velvet lined, containing: Ruling pen, 4 1/4 inches, with spring and ebony handle. Ruling pen, 5 1/2 inches, with spring and ebony handle. Steel spring bow dividers, 3 1/4-inch metal handle. Steel spring bow pencil, 3 1/4-inch metal handle. Steel spring bow pen, 3 1/4-inch metal handle. Hair spring dividers, 6 inches. Compasses, 6 inches, with fixed needle point, pen, pencil point and lengthening bar. Box with leads.

Price per set \$14.00

Technical School Instruments

No. 1223

This brand of German silver instruments, due to their price are well adapted for school use. They are very superior to the usual brass or nickel plated tools being improved in quality and appearance, and will render good service for a reasonable time.

Pocket case, containing compasses, 5 1/4-inch, with pen, pencil point and lengthening bar; dividers, 5 1/4-inch; spring bow pen, 3 1/4-inch; ruling pen, 5-inch, metal handle; key and lead box. Price per set.....\$5.00

"Reliance" Instruments

The following are a few of the most commonly used instruments and are often bought separately. For that reason we price them separately. They are especially adapted for manual training school use and possess remarkable satisfactory qualities.

No. 1142. Steel spring bow dividers, 3 1/4-inch metal handle. Price each.....\$1.30
No. 837. Detail ruling pen, 6-inch ebony handle. For long lines. Price each.....\$2.20
No. 1149. Hairspring dividers, 6-inch. Price each.....\$2.20
No. 1150. Compasses, 6-inch, with fixed needle point, pen, pencil point and lengthening bar. Price each.....\$4.40
No. 1144. Steel spring bow dividers, 3 1/4-inch. Price each.....\$1.70
No. 1145. Steel spring bow pencil, 3 1/4-inch. Price each.....\$2.40
No. 1146. Steel spring bow pen. Price each.....\$2.40

No. 11B Fulton Drawing Paper

Light Green

Light green color, smooth, hard surface. Takes ink and pen. Does not become brittle and stands erasing to the greatest extent. Color more agreeable to work on than either white or cream.

Royal	19x24 inches.	Price per quire.....	\$2.20
Imperial	22x30 inches.	Price per quire.....	2.85
Special	24x36 inches.	Price per quire.....	4.60

No. 12 Cream Drawing Paper

Exceptionally fine for preliminary and general drawings and sketches. Takes ink, pencil and color well.

Royal	19x24 inches.	Price per quire.....	\$2.70

H.Channon Company Chicago

Lufkin Measuring Tapes

The Improved Method of marking overcomes errors and annoyances in reading. In taking a measurement, the total length usually falls somewhere between the exact feet, and the reading before the eye is for the fraction of a foot only. It is necessary to refer back to the foot figure before the total reading can be had. In nine cases out of ten the fractional reading is lost or forgotten and it is necessary to take a second measure to avoid error. This Improved Method consists of the repetition of a Foot Reading at every inch in figures, easily distinguished from the subdivision figures bringing the Total Reading instantaneously before the eye. Suppose the total length measured should fall at 46 ft. 7 1/4 in. the reading on the tape would appear as in the cut shown above. All Lufkin steel tapes 1/4 and 3/8 inches wide and up to 100 feet are furnished with "Instantaneous Readings" as described above.

Reliable Steel Tape

The "Reliable" is the finest steel tape made regardless of price. Fine Russet Leather Case with heavy nickel plated brass mountings. Double Folding flush nickel plated brass winding handle, opened by pressing pin on opposite side. Measurements guaranteed perfectly accurate. Width of tape 3/8 inch. Marked feet, inches and eighths on one side.

Number	Price Each	Length Feet	Diameter of Case
200	\$ 4.50	25	2 1/4 in.
203	7.25	50	3 1/4 in.
205	10.50	75	4 1/4 in.
206	12.80	100	4 1/2 in.

Packed one in a paste-board box.

Tapes marked feet, 10ths and hundredths of feet for surveyors' use same price as regularly marked tapes.

Reliable Jr. Steel Tape

An exact counterpart of the "Reliable" tape listed above and not much over half its size and weight. Although small and light it is constructed in such a durable manner that with proper care it will last indefinitely. Extreme accuracy and the finest construction throughout is guaranteed. Each tape is packed in an individual box. Width of tape 1/4 inch.

Number	Price Each	Length Feet	Diameter of Case
100	\$4.30	25	2 1/4
103	5.25	50	2 3/4
105	6.60	75	3 1/4
106	8.00	100	3 3/4

Challenge Steel Tape

Fine Russet Leather Steel Lined Case with extra heavy Nickel Plated Brass Mountings. Fine Steel Tape 3/8 inch wide.

Winding handle is Brass Extra Heavily Nickel Plated and is opened by pressing button on opposite side. This is a strictly first quality tape and is excelled only by the "Reliable" Tape.

Number	Price Each	Length Feet	Diameter of Case
260	\$3.75	25	2 1/4
263	4.75	50	3 1/4
265	6.00	75	4 1/4
266	7.75	100	4 1/2

Challenge Jr. Steel Tape

Exactly the same quality as the Challenge Tape described above, and is designed for those who desire a tape that is light and durable.

Number	Price Each	Length Feet	Diameter of Case
1260	\$3.50	25	2 1/4
1263	4.00	50	2 3/4
1265	5.25	75	3 3/8
1266	6.75	100	3 3/4

Rival Steel Tape

Nickel Plated, highly polished steel case. Nickel Plated Brass Winding Handle which folds flush and is opened by push button on opposite side.

Fine steel tape, marked on one side only in either 10th or 12th inches. Please specify which is wanted, when ordering. A very good tape at a moderate price.

Number	Price Each	Length Feet	Diameter of Case
240	\$3.25	25	2 3/4
243	4.00	50	3 1/4
245	5.25	75	3 3/4
246	6.60	100	4 1/4

Rival Jr. Steel Tape

A light, compact, serviceable tape in which durability has not been sacrificed. Junior tapes are 1/4 inch wide and guaranteed accurate.

Number	Price Each	Length Feet	Diameter of Case
1240	\$3.00	25	2 1/4
1243	3.50	50	2 3/4
1245	4.75	75	3 1/4
1246	5.75	100	3 3/8

Channon steel barrels are great gasoline and oil savers. Get our prices.

Pocket Steel Tapes

Nickel Plated Brass Case. Fine Steel Tape $\frac{1}{4}$ inch wide. Spring Wind and Center Stop. Tape is marked on one side only in inches and 16ths. Weight per Dozen about $1\frac{1}{4}$ pounds.

Board Rules

Finest Selected Hickory

Figures clearly burned in. Tempered and polished steel head brazed to heavy brass shoulder attached to rule with heavy rivets. Diamond or square head, as desired; 3 ft.; 3 tier measures, lengths 8 to 18 feet.

No. 2. Width, $1\frac{1}{2}$ inches. Price, each.....\$2.90

No. 3. Width, $1\frac{1}{4}$ inches. Price, each.....2.60

No. 2N. Width, 1 inch. Price, each.....2.90

*Same as No. 2, except brass shoulder is $\frac{1}{2}$ inch shorter.

Weight per dozen, about 6 pounds.

Nickel Plated Lumber Gauges

For measuring the thickness of lumber. Very light and convenient. Made of nicely finished aluminum and heavily nickel plated.

No. 00. $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2.

Price, each\$1.00

Johnson's Patent Combination Rule

Made of spring German silver, accurately and distinctly graduated. Can be used as a hook rule, caliper gauge, protractor, triangle or try square. Upper edge is graduated in 32nds; lower edge in 16ths. Protractor is divided to five degrees, and vernier reads to $\frac{1}{2}$ degree. Rule remains firm wherever set.

Price each, 6-inch, 2-fold.....\$2.75

Price each, 12-inch, 2-fold.....4.50

The "Rustless" Rule

Luminoy, of which this rule is made, is a special alloy of aluminum, which always remains bright without polishing. It will not rust when exposed to water or moisture. Figures are large and clear. Graduations (16ths) are stamped on the metal and cannot be worn or rubbed off. Joints are spring steel and will not work loose. Very light weighing but 1 ounce per lineal foot.

Length, feet 4 5 6

Price, each\$2.00 \$2.50 \$3.00

Counting Machines

The Redington

A reliable, efficient little machine for rapid and accurate counting. Durable, neat in appearance and low in price. Absolutely accurate at high or low speed. Will not jump or repeat. Easily and quickly set back to zero without the use of a key or other device. All working parts are enclosed and protected, yet easily accessible for inspection. Dimensions

$3\frac{1}{4} \times 2\frac{1}{4} \times 2\frac{1}{4}$ inches. Weight boxed, 23 ounces.

Price each \$10.00

The American

This machine is larger, heavier and stronger than the Redington and is not intended for high speed work. It is simple, reliable, and any number wheel can be set forward or backward without disturbing the others. The operating lever can be adjusted so that it may be operated from four different directions. Dimensions

$6 \times 3 \times 3\frac{1}{4}$ inches. Weight boxed, 4 pounds, 1 ounce.

Price each \$15.00

The American

With Locked Case

Where there is any likelihood that machine operator or other employee may tamper with the counter, this type should be used. Exactly the same as the American with a cover which can be locked and numbers show through a glass. Weight $4\frac{1}{4}$ pounds.

Price each \$16.00

No. 748 B. & S. Speed Indicator

For determining velocity of shafts and spindles running in either direction. Registers on either side, front side used to determine velocity of shafts and spindles running in one direction; reverse side speed of those running in opposite direction, avoiding all confusion and errors.

Dials register units and tens by means of a revolving pointer and, in addition, front dial registers hundreds up to 5000 by means of a rotating dial in the center. This dial will register when either side is used.

Quick use is greatly facilitated by means of a small knurled wheel on side of case which, when turned, reverts the rotating disk on the front dial to starting point.

Price each \$5.50 In Morocco case \$6.00

The Benton Tally Register

These little registers are positive in their action and can be set to zero at will. They are simple in construction, can be carried in the pocket, are about the size of an ordinary watch and weigh about 6 ounces. They are used by railroad telegraph and steamboat men for checking or tallying telegraph poles, and passengers, and all kinds of freight, by cattlemen for counting cattle and sheep, by lumbermen, loggers, and timber estimators, and by detectives and spotters, and in places of amusement for counting people going in and out. In fact they can be used for any purpose where a correct count is desired to be kept.

No. 00. Records to 100. Price each \$3.00

No. 0. Records to 1,000. Price each 2.75

No. 1. Records to 10,000. Price each 6.25

The Job Counter

An extremely simple and compact counting machine. Parts are stamped from steel and brass with case hardened ratchet and dog. Provided with stationary adjusting keys for setting and two bolt holes for attaching. Case heavily nickel plated. Approximate weight each 1 pound.

4 Dial, counts to 9,999. Dimensions of case $4\frac{1}{4} \times 2\frac{1}{4} \times 1\frac{1}{4}$ inches. Price each \$5.50

5 Dial, counts to 99,999. Dimensions of case $4\frac{1}{4} \times 2\frac{1}{4} \times 1\frac{1}{4}$ inches. Price each \$6.00

Veeder Special Counter

A small, compact instrument; positive count and very easily read. Reading is always in sight and cannot be accidentally disturbed. Operator does not have to watch counter, but can give all his attention to watch. Length $3\frac{1}{4}$ inches. Weight 4 ounces.

Price each \$4.75

The Lightning Speed Indicator

Recording to 1,000 Revolutions

This little instrument weighs but $1\frac{1}{2}$ ounces, is very easily read and is suitable for testing all speeds of machinery from the most delicate to the heaviest. Supplied with two rubber tips for pointed, flat or hollow centers and an extension spindle which gives it a reach of $2\frac{1}{2}$ inches. Packed out in a cloth covered case.

Price each \$3.75

In leatherette case 4.50

General Description of Files and Rasps

Shops striving for efficiency have learned the wisdom of careful file selection.

They have ascertained the saving of time by fast cutting files and the lessening of errors by the use of files that cut accurately.

They have determined the positive economy in using high quality, long wearing files though the initial cost may be slightly more than that for inferior products.

The saving of time, the improvement of work, the appreciation of better files by the workmen, and the longer service from our files are important points in increasing the efficiency of your shop.

We offer two reputable grades:

Imperial Brand

Our Imperial Brand Files are made of the very best quality crucible file steel, which takes a uniform hardness without becoming brittle. They are perfectly tempered to insure fast, even cutting and possess unusual long wearing qualities. Imperial Brand Files are cut on the newest, improved file cutting machinery, and great care is exercised in every stage of manufacture.

Before packing, Imperial Brand Files are thoroughly examined and selected for shape, cutting qualities, soundness and temper, thus avoiding the possibility of soft or imperfect files being shipped.

Great Western Brand

Our Great Western Brand Files are of first quality, forged from high quality file steel, carefully tempered, hardened, inspected before packing and entirely free from seconds.

Great Western Brand Files are guaranteed to give satisfactory service and will cut better, faster and longer than many similarly priced files.

Files and Rasps Have Three Distinguishing Features.

First—Their Length—Which is always measured exclusive of their Tang.

Second—Their Kind or Name—Which has reference to the shape or style.

Third—Their Cut—Which has reference not only to character, but also to relative degrees of coarseness of Teeth.

The Length—Of a file is the distance between its Heel or part of the File where the Tang begins and the point or end opposite. The Tang or portion of the File prepared for the reception of the handle is never included in the Length. In general, the Lengths of Files bear no fixed proportion to either their Width or Thickness, even though they be of the same kind.

The Kind—By Kind we mean the varied shapes or styles of Files which are distinguished by certain technical names, as, for instance, Flat, Mill, Half-round, etc. The Kinds are divided, from the form of their Cross Sections into Three Geometrical Classes, namely, Quadrangular Sections, Circular Sections and Triangular Sections; Odd and Irregular Forms are collected under Miscellaneous Sections. These Sections are in turn sub-divided according to their general contour or outline, into Taper and Blunt.

Taper—Designates a File, the Point of which is more or less reduced in size, both in Width and thickness by a gradually narrowing Section extending from One-half to Two-thirds the Length of the File, from the Point; Custom has also established it as a short name for the Three Square Hand saw File.

Blunt—Designates a File that preserves its Sectional Shape throughout, from Point to Tang.

The Cut of Files is divided, with reference to the character of the Teeth, into Single Cut, Double Cut and Rasp Cut, and with reference to the Coarseness of the Teeth into Rough, Coarse, Bastard, Second Cut, Smooth and Dead Smooth. Regarding the latter we may say very briefly that the Bastard Cut is used upon the coarser, heavier classes of work while the Second Cut and Smooth are used for the finer grades and for finishing the work started by the Bastard. The Rough and Dead Smooth are seldom called for, but correspond to the above use.

The Single Cut File—Is one in which a Single, Unbroken Course of Chisel Cuts is made across its surface, arranged parallel to each other, but with a horizontal obliquity to the Central Line.

The Double Cut File—Has Two Courses of Chisel Cuts crossing each other, the Second Course, with rare exceptions, being finer than the first.

Rasp Cut—Differs from Single or Double Cut in the respect that the Teeth are disconnected from each other, each Tooth being made by a single pointed punch.

Superfine, or Super, Cut—A term applied by the Lancashire File-makers to designate a grade of Cut designated by us as Dead Smooth.

Safe Edge, or Side—Terms used to denote that a File has one or more of its Edges or Sides smooth or Uncut, that it may be presented to the work without injury to that portion which does not require to be Filed.

All orders filled with Imperial Brand unless otherwise specified.

Imperial

Flat Files

Great Western

Double Cut—Tapering Sides

One of the most common files used; not confined to any specific kind of work, but used by mechanics generally for a great variety of purposes, in machine shops and foundries.

Length, inches	3	4	5	6	8	10	12	14	16	18	20
Bastard cut, per dozen		\$3.70	\$3.90	\$4.30	\$5.30	\$7.00	\$9.70	\$13.30	\$17.80	\$23.90	\$31.10
Bastard cut, price each		.37	.39	.43	.53	.70	.97	1.33	1.78	2.39	3.11
Second cut, per dozen		4.30	4.60	4.80	6.10	8.10	11.00	15.30	20.10	26.80	35.30
Second cut, price each		.43	.46	.48	.61	.81	1.10	1.53	2.01	2.68	3.53
Smooth cut, per dozen		4.70	4.90	5.30	6.60	8.70	12.10	16.70	22.30	29.20	38.30
Smooth cut, price each		.47	.49	.53	.66	.87	1.21	1.67	2.23	2.92	3.83

For dead smooth files (not carried in stock) double the price of bastard cut.

Half Round Files

Double Cut—Tapering Sides

This file is used largely in the machine shop. Double cut on flat side, single cut on convex side.

Length, inches	3	4	5	6	8	10	12	14	16	18	20
Bastard cut, per dozen		\$4.80	\$5.40	\$6.10	\$7.50	\$9.10	\$11.80	\$15.50	\$20.60	\$27.50	\$36.20
Bastard cut, price each		.48	.54	.61	.75	.91	1.18	1.55	2.06	2.75	3.62
Second cut, per dozen		5.60	6.10	6.70	8.30	10.10	13.00	17.00	22.50	29.90	39.40
Second cut, price each		.56	.61	.67	.83	1.01	1.30	1.70	2.25	2.99	3.94
Smooth cut, per dozen		6.10	6.40	7.10	8.90	10.70	13.90	18.30	24.20	32.00	42.30
Smooth cut, price each		.61	.64	.71	.89	1.07	1.39	1.83	2.42	3.20	4.23

For dead smooth half round files (not carried in stock) double the price of bastard cut.

Hand Files

Double Cut—Parallel Sides—One Safe Edge

This file is preferred among machinists and engineers for finishing flat surfaces. Owing to its shape, and having one safe edge it is particularly useful where a flat taper file is unsuitable.

Length, inches	4	5	6	8	10	12	14	16
Bastard cut, per dozen	\$3.70	\$3.90	\$4.30	\$5.40	\$7.50	\$10.70	\$15.00	\$20.10
Bastard cut, price each	.37	.39	.43	.54	.75	1.07	1.50	2.01

Weight, dozen, pounds	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$

Extra Slim Taper Files

Similar to the slim taper files but made of lighter stock. Especially intended for filing panel, back, butchers' scroll and other thin edge, fine tooth saws.

Length, inches	3	3 $\frac{1}{2}$	4	4 $\frac{1}{2}$	5	5 $\frac{1}{2}$	6	7	8
Thickness, inches	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$

All weights and dimensions given are approximate only and are not guaranteed. Packed, 10-inch and under, 1 dozen in a box; 12-inch and longer, $\frac{1}{2}$ dozen in a box. All orders filled with Imperial Brand files unless otherwise specified.

Imperial

Double End Taper Files, Reversible Great Western

Single Cut—Tapering Sides—With Handle

Same as slim taper, with the added advantage of having two files in one at a lower price and a handle which can be easily attached. Intended for hand and buck saw filing.

Length of File, Inches	6	7	8	9	10
Price, per dozen.....	\$3.50	\$3.50	\$3.90	\$4.40	\$4.90
Price each.....	.35	.35	.39	.44	.49
Approx. thickness, inches.....	$\frac{1}{12}$	$\frac{1}{4}$	$\frac{9}{12}$	$\frac{3}{8}$	$\frac{3}{8}$

Band Saw Files

Made in Two Styles—Parallel or Blunt and Tapering Sides—Cut Shows Blunt

For filing band saws, the slenderness of which does not permit the teeth being filed to a sharper bottom. This file has rounded edges, is mill cut, and has shorter angles than the taper patterns. Blunt files not priced, advance 1 inch. In ordering state whether blunt or taper files are wanted.

Length, inches.....	4	5	6	8	10
Regular, per dozen.....	\$2.90	\$3.50	\$4.70	\$6.70	\$9.70
Regular, price each.....	.29	.35	.47	.67	.97
Slim, per dozen.....	2.60	3.20	3.90	5.30	7.50

Vixen Files or Hand Milling Tools

Vixen Files, because of their circular teeth, will not chatter or chase, produce a very even surface, and will work well on greased surfaces. They are adapted to soft and tool steel, cast and wrought iron, bronze, copper and other hard metals. They will cut brass, aluminum and other soft metals without clogging.

With Round Handles

Price Per Set of 12.....\$1.60

"Spark" Brand Coil Files

Indispensable for filing spark gaps, plugs, magnetos and contact points. Owing to their special shape and size, they may readily be inserted between the points for cleaning purposes. Price, dozen.....\$8.00 Each.....\$0.40

Stub Files and Holder

Files Are Detachable

Indispensable for filing small surfaces in cramped places.

Price per set.....\$9.00
Extra files, price each......45

Surface File Holder

This tool is used for filing large surfaces where considerable stock is to be removed. Will hold any shape file.

No.	Will Hold Files, Length, inches	Price Each
4	12, 14	\$1.60
5	14, 16	1.90

For files of other styles, see previous pages.

Taperhole File Handles

With Short Ferrule—Style A.

With Long Ferrule—Style B.

The holes in these file handles are made to fit the ends of the files. With tang touching full length hole, very little driving is necessary to secure a perfect fit, and splitting of file handles is reduced to minimum. Users of Taperhole File Handles lose time in reboring or burning out handles and always have handle straight on the file. Taperhole handles do not become loose.

The Style B is preferable because of its long steel ferrule which obviates breakage and is finely finished throughout.

	Style A.				
Number	1	2	3	4	5
Length, Inches	3 3/4	4	4 1/4	4 1/2	4 3/4

Kaalot Fibre File Handles

These handles are made of a continuous length of paper which is cemented while being wound. They are actually indestructible and will give long service. Nos. 4, 5 and 6 have a brass ferrule imbedded in end. They stickily will not split. They are perfectly smooth and have a nice red finish.

No.	Size, inches	Size of File, inches	Per Gross	Per Dozen

Colton's Steel Back File Card. Mounted on canvas and secured to steel back. Size 2x4 inches. Length 8 inches. Weight 2 1/2 lbs. per dozen.

Price Per Dozen....\$4.00 Price Each.....\$0.40

Common Pattern. Mounted on canvas and secured to wood back. Size 2x4 inches. Length over all 8 inches. Weight 2 lbs. per dozen.

Price Per Dozen.....\$3.00 Price Each.....\$0.30

Gripwell Mechanics Vises

Our "Gripwell" brand of vises are made of a special mixture of iron and steel, making a tough, strong casting. They are heavy and the material is well distributed, all parts subject to strain are re-inforced. Screw, knob, handle and jaws are cold rolled steel. Jaws are a high grade crucible cast tool steel, not vise jaw steel or open hearth steel. The nut which is subject to the most wear is malleable and is extra heavy. "Gripwell" Vises are finished with dull black paint. Their design, material and workmanship is strictly first class throughout and they are fully warranted.

Machinists' Stationary Base

This pattern is one of the most popular types of vises for general use. It is strong, heavy, well made and all finished parts are handsomely polished and lacquered.

Special attention is called to Nos. 108 and 108½. These vises are extra heavy and are suitable for the hardest service.

No.	Price Each	Width Jaw, inches	Opens, inches	Weight, lbs.
102½	\$5.25	2½	2½	17
103	6.00	3	4	22

108	50.00	8	12½	276
108½	60.00	8½	12½	286

Machinists' Swivel Base

This vise can be turned in any position on an axis parallel with the floor and is locked by a clamping bolt which works in a channel. The grip is positive and permits no slipping.

For some classes of work this vise will be found most convenient, and the difference in price between it and the stationary base vise is so small, that the additional investment is justified.

No.	Price Each	Width Jaw, inches	Opens, inches	Weight, lbs.
202½	\$6.50	2½	2½	20
203	7.50	3	4	28

9	45.00	7 in.	12 in.	224 lbs.

Prentiss Patent Self-Adjusting Jaw Vises

The back jaws of these vises are self-adjusting, and in use conform by automatic action to any angle making firm the object held, whether straight bevelled or wedge shaped. By inserting pin, marked A in illustration, jaw becomes fixed thus making a parallel solid jaw vise. The faces on Prentiss Vises are secured to the jaws by screws and are therefore replaceable.

Machinists' Stationary Base Vise

66	24.00	6	7	100

The above line of vises are but a few of our immense stock.

"Bullock" Woodworkers' Vises

Made with the same careful workmanship as our Bullock machinists' vises, but especially designed for woodworkers with the idea of giving workmen vises with which they can work to the best advantage. The self-adjusting jaw vises are exceptionally well designed, being much lower than most vises of this type, which permits them being placed on same height benches as standard swivel and stationary base vises. Castings made from special alloy of iron and steel, screw and handle of cold rolled steel, jaws crucible cast tool steel carefully hardened, and of malleable iron.

Brass and Copper Vise Jaws

Made to cover rough jaw faces and will not mar or injure finished work which would be spoiled if clamped in an ordinary vise. In ordering state make of vise and size of jaws.

Prices on Application.

Machinists' Vises

Consult us on your machinists' vise requirements when installing new equipment or adding to your present.

Our stock is exceedingly large, representing the most reputable manufacturers.

Pipe Vises

We have pipe vises suitable for every purpose.

On account of the severe strain a pipe vise is subjected to, we always recommend purchasing the size of a little larger capacity than is actually needed.

Woodworkers' Vises

Albernathy Roller Nut Rapid Acting Woodworkers' Vise

Rapid acting, continuous screw vises which overcome the disadvantages of the old style vise. Screw engages in a roller nut which makes a half turn, a slight turn to the left disengages screw from nut which allows for rapid movement of jaws. Either style vise can be furnished with adjustable dog shown in right hand illustration.

No. 70. Jaws 7 inches long, 4 inches deep, opening 9 inches, weight 26 pounds. Price.....\$6.50

No. 70D. Same size, with adjustable dog. Price.....\$6.00

No. 80. Jaws 10 inches long, 4 inches deep, opening 12 inches, weight 35 pounds. Price.....\$6.50

No. 80D. Same size, with adjustable dog. Price.....\$7.00

No. 80 Std. Cabinet and Pattern Makers' Size

No. 70D for Manual Training Schools, Home, Shop Use, Etc.

Toles Pat. Rapid Acting Vise

This type of vise is used extensively in manual training schools. Made of high grade material and very durable. Slot in screw disengages nut for rapid movement of jaws. Width of jaws 10 inches, depth 4 inches. Jaws open 12 inches. Weight 36 pounds. Price each.....\$6.50

Massey Lightning Grip Parallel Bar Vise

The construction keeps jaws parallel and prevents lost motion.

No.	Width of Jaw, Inches	Jaw Opens, Inches	Weight, Pounds	Price Each
23	8	8	31	\$5.00
24	10	12	39	6.00

The Lightning Grip Woodworkers' Vise

This is a heavy, well made vise intended for hard and continuous service. It is extremely quick acting and a quarter turn of handle gives a positive grip. Furnished with stop in front jaw for 75c extra.

No.	Price Each	Width of Jaw, Inches	Opens, Inches	Weight, Pounds
17	\$6.00	9	12	47
19	4.00	7	7	29

Universal Pattern Makers' Vise

This vise has six pairs of jaws, so that it is adapted to grasp any kind of work without regard to irregularity of form. Can be used in any conceivable position. Supplied with one set of grooved jaws to hold round work, one set for taper work, one set to hold copper work, one set to hold any size ring. Also one rough jaw for cast iron work and one smooth jaw for finished work.

No.	Price Each	Size of Jaw, Inches	Opens, Inches	Weight, Pounds
1	\$15.00	7x18 1/2	14	86
2	12.50	5x14	12	56

Quick Acting Universal Manual Training Vises

A standard vise made with a small jaw face. With the vise swung at any angle work can be conveniently held flat on the bench.

88½	32.00	4¾	6½	½ to 4	94
89½	45.00	5¾	9½	½ to 6	141

Smith's Pat. Pipe Vise

This combination pipe vise has been on the market for many years and is very favorably known. It is heavy, strong and serviceable and sold at a lower price than either the Prentiss or Parker Pattern.

Number	1	2	3
Price each	\$16.00	\$22.00	\$32.00
Width, Jaws, inches	3¾	4	4½
Opens, inches	4	5	6
Takes Pipe, inches	½ to 2	½ to 3	½ to 4
Weight, pounds	47	70	100

Walworth Pat. Combination Vise

A very strong, heavy, and substantial bench vise much preferred by many mechanics. Has 5-inch solid steel jaws cut extra coarse to grip pipe securely. Holds as well as pipe vises with angular jaws and is handy and quick to operate.

Has a large capacity, holding all sizes of pipe from ½ to 6-inch. Clamps to bench. All parts interchangeable. Weight, 78 pounds.

Price each \$18.00

The Ellis Chain Pipe Vise

This pipe vise is very similar to the Vulcan, but is intended for use with the large sizes of pipe. Grips pipe perfectly without crushing it. Very strong and well made, with a capacity for large range of sizes.

Number	0	1
Holds pipe, in.	½ to 6	½ to 10
Weight, lbs.	28	55
Price, comp.	\$12.00	\$20.00

Vulcan Chain Pipe Vise

This vise is unbreakable, compact, rapid and positive in action. Adjustment is effected by slightly turning the screw. Made entirely of wrought steel; drop forged jaws of saw tempered steel for file sharpening. Jaws of the No. 1 size are designed to prevent bending of the smallest sizes of pipe should too much pressure be applied.

Number	1	2	4
Pipe size, inches	½ to 2	½ to 4	½ to 8
Price complete	\$3.50	\$7.50	\$18.00
Weight, pounds	4	10	30

New Auto Vise

This tool combines a solid anvil, a strong machinist's vise and a powerful pipe vise. A most handy tool for garage or machine shop. Screw and handle are cold rolled steel. Jaws hardened tool steel.

Number	Price Each	Width, Jaws, in.	Capacity Pipe Jaws, Inches	Weight, Lbs.
231—Stationary base	\$10.00	3	½ to 1½	32
232—Stationary base	14.00	3½	½ to 2	65
240—Swivel base	13.00	3	½ to 1½	42
241—Swivel base	16.00	3½	½ to 2½	80

Malleable Hinged Pipe Vice

Self Locking

The bolt which forms the hinge on this vise is removable, and entire head of vise can be taken off and reversed, which is a very convenient feature where vise is used for working in close quarters.

Body and base of vise are malleable iron. Handle and screw are cold rolled steel.

Size No.	Price Each	For Pipe Sizes	Weight, Pounds
0	\$3.00	$\frac{1}{8}$ to 2	5
1	3.75	$\frac{3}{8}$ to 2 $\frac{1}{2}$	8
2	5.75	$\frac{3}{4}$ to 3 $\frac{1}{2}$	14
3	8.40	$\frac{1}{2}$ to 4 $\frac{1}{2}$	18
4	19.50	$\frac{1}{2}$ to 6	45

Malleable Kit Pipe Vice

A strong and convenient pipe vise intended especially for plumbers and steamfitters for carrying in tool kit. It is exactly the same as the vise shown above and in addition has a bracket enabling the user to attach it to table, bench, or any available projection without using screws or bolts.

No.	Price Each	Capacity
0K	\$10.00	$\frac{1}{4}$ to 2
1K	14.00	$\frac{1}{2}$ to 2 $\frac{1}{2}$
2K	20.00	$\frac{1}{4}$ to 3 $\frac{1}{2}$

Prentiss 20th Century Pipe Vice

A very strong, convenient and durable pipe vise which can be used on bench or post in any position. Material and workmanship is guaranteed strictly first class throughout.

The smallest size is particularly adapted for the mechanics' tool kit, being very compact and light in weight.

Number	Price Each	Capacity, Pipe Sizes	Weight Each, Pounds
285	\$5.00	$\frac{1}{4}$ to 2	8
286	7.50	$\frac{3}{8}$ to 3	18
288	14.00	$\frac{3}{8}$ to 4	40

Toledo Pipe Vice

One of the best vises made for the steamfitter and plumber. It is much more than a pipe vise. It will hold tight anything that will go inside the jaws. Illustrations show a valve and an ell as well as a piece of $\frac{1}{8}$ and 2 $\frac{1}{2}$ -inch pipe, all held equally well. May even be used for holding polished pipe. Grips with half the pressure of most vises. Will not crush or bend pipe and is fully guaranteed to give satisfactory service.

No. 1. $\frac{1}{8}$ to 2 $\frac{1}{2}$ -inch pipe. Weight, 15 pounds. Price, \$10.00
No. 2. $\frac{1}{8}$ to 4 $\frac{1}{2}$ -inch pipe. Weight, 45 pounds. Price, \$20.00

Genuine Armstrong Hinged Pipe Vice

The Armstrong hinged pipe vise is well known and so simple in construction that a detailed description is hardly necessary. Made of the best malleable iron with steel jaws and are interchangeable so that any parts which become worn in use can be replaced.

Number	Price Each	Capacity	Weight, Pounds
00	\$6.00	$\frac{1}{8}$ to 1 $\frac{1}{4}$	3
0	8.50	$\frac{1}{8}$ to 2 $\frac{1}{2}$	11
1	10.00	$\frac{1}{8}$ to 2 $\frac{1}{2}$	16
2	20.50	$\frac{1}{2}$ to 4 $\frac{1}{2}$	30
3	30.00	1 to 6	35

Jarecki Patent Pipe Vice

This strong and powerful pipe vise is especially intended for shop use—two sizes having a capacity from 1 $\frac{1}{2}$ to 12-inch pipe. The pin which forms the hinge may be inserted in three different holes, thus giving the vise its great capacity. A very handy vise for taking old work apart as upper jaw is hinged allowing work to be placed in vise from the side. Frame is solid iron and jaws are hardened tool steel.

Number	Price Each	Capacity of Pipe	Weight, Pounds
1	\$24.00	1 $\frac{1}{2}$ to 6	67
2	60.00	6 to 12	168

Henderson Portable Conduit Bench

A Complete Conduit Shop

A compact vise and bending stand, in great demand among electricians and other mechanics who cut thread and bend pipe.

A light, portable tool which can be readily placed in any position on a floor or easily moved from floor to floor as work demands. Especially efficient for working 3/4-inch and smaller pipes and conduits.

The legs may be placed in the best position for the particular work and may be reversed, making it very compact for carrying or shipping.

Every outfit includes a conduit bender, rigidly mounted opposite the vise. The pipe is bent mainly by weight of the workman and is fed into the bender waist high. There is no muscle strain due to awkward positions. The pipe is not flattened or kinked and is easily bent to exact measurements. The side outlet permits quick removal of pipe, and, together with carefully designed bending bosses will make the most complicated and difficult bends.

To set up, turn legs into the position best suited for the work and fasten turnbuckle to the floor with screw hook as shown. This turnbuckle is heavy and strong and holds the tool rigidly.

An expansion shield is also furnished for securing to concrete floor.

Weight, 40 pounds. Price.....\$30.00

Stillson-Vise

Spin Up Nut, Turn Down Screw—Quick as a Flash—1/8 to 2-Inch

A compact little kit vise which combines strength, lightness, speed of adjustment and range. Although weighing approximately 6 pounds, the Stillson Vise has a range of from 1/8 to 2-inch pipe. Can be easily screwed, nailed or clamped to bench or post, and will hold firmly on account of its long base. Clamp can be quickly removed or swung up out of the way when not in use. Grips pipe much more positively than the ordinary vise—requires less pressure to tighten—is not as hard on the pipe.

The movable jaws used in this vise are guaranteed. Stillson and Trimo wrench jaws are known and used the world over.

*Maximum capacity, 2 inches with Trimo jaw; with Stillson jaw, 1 1/2-inch.

No. 1 Stillson-Vise, complete, with clamp.....\$3.00

No. 1 Stillson-Vise, complete, without clamp... 2.50

No. 1 Stillson-Vise, complete, without wrench jaw and nut..... 2.25

No. 1 Stillson-Vise, complete, without clamp, wrench jaw and nut..... 1.80

Blacksmiths' Solid Box Vise

The front and back jaws are each forged from one solid piece of special ingot steel. The jaw facings, of crucible tool steel, are welded far enough down to relieve any possible strain.

The box is deeper and the jaws open wider than is usual with a vise of this type. They open the full width.

It admits of a wider range of work in proportion to its size than any other vise on the market.

The jaw faces are accurately ground and polished. They come together flat and in perfect alignment.

Hand Vises

No. 549 Standard

Drop forged tempered steel jaws finished black or bright. Handles are bright finish cocobolo or black cherry.

Width of Jaws Inches	Jaws Open Inches	Weight Ounces	Prices Each	
			Black	Bright
1 1/4	1 1/4	14	\$1.25	\$1.50
1 1/2	1 1/2	18	1.50	1.75

No. 540 "Boss" Vise

All steel (except handle), hardened throughout, finely finished with polished jaws.

Width of Jaws, Inches	Jaws Open, Inches	Weight, Pounds	Price Each
1 1/4	3/4	1 1/2	\$0.75
1 1/2	1	2 1/2	1.00

No. 1 Alford

Drop forged, tempered jaws, hollow cocobolo handle or holding tools. Handle or bit brace shank can be screwed into vise as illustrated or at right angles. Price includes tools.

Width Jaws, Inches	Jaws Open, Inches	Price Complete
1 1/4	1 1/4	\$3.50

Spring Hand Vises With Bright Steel Jaws

Length, inches	3	4	5	6
Width of jaws, inches	1	1 1/4	1 1/4	2
Price each	\$0.60	\$0.60	\$0.85	\$1.20

Improved Hand Vise Nickel Plated

For holding wire there is a hole through the handle and screw. Weight, 8 ounces; width of jaws, 1/2-inch.

Price each \$3.00

Jeweler's Pin Vise Nickel Plated

The screw is large, cleanly cut and covered from dirt. Jaws are 3/8-inch wide.

Prices

Regular size, price each \$2.50
Small size, price each 2.25

Nye Pocket Vise

Lower part of frame may be inserted in the jaws of an ordinary bench vise or can be fastened to edge of bench with ten-penny nails. Jaws are tool steel, angle iron frame. Cold rolled steel screws. Can be carried in coat pocket.

No. 1. Holds pipe from 1/8 to 1 1/4 inches. Weight 1 1/2 pounds. Price each \$2.50
No. 2. Holds pipe from 1/8 to 2 inches. Weight 2 1/2 pounds. Price each \$3.50

Nye Chain Vise

Different from other vises in the construction of the jaws, the upper jaw being V-shape, and acting like a swivel. The strength of one finger is sufficient to tighten the vise so that it will resist any turn or pull. The jaws are made of the finest tool steel, hardened and tempered. The long screw is of cold rolled steel. Takes pipes from 1/8 to 2 inches, including 2-inch coupling. The chain attachment is guaranteed to stand 1000 pounds strain. No separate parts to attachment.

Price complete \$7.50
Price without chain attachment 4.00

Four Jaw Independent Lathe Chucks

An independent chuck is one in which the jaws are operated independently of each other.

Made with cast iron body or cast steel body.

The cast iron body is very strong, the faces are ground true to straight edge, and accurately graduated in inches. The 8-inch and smaller sizes have solid faces. The 9 and 10-inch have openings in the face between the jaws. The 12 to 16-inch have T slots in the face; 18-inch and larger have openings and T slots, as shown in the accompanying illustration.

The cast steel body is suitable for the heaviest class of work in railroad shops and government service. Jaws are extra wide and adjusting screws are of large diameter with heavy square thread, nicely fitted and threaded their entire length.

Three and Four Jaw Combination Lathe Chucks

A combination chuck is one in which the jaws may be operated either universally or independently, as desired.

The body is a highly finished casting, with face ground true to a straight edge. The 3-jaw chucks under 12 inches have solid faces. The three jaw chucks, 15 and 24-inch, have two slots between the jaws; 26 and 36-inch have three slots between the jaws; the 4-jaw chucks, 15 to 36-inch, have two slots between the jaws.

The chucks are provided with recess in back to which a face plate is fitted, this plate also being fitted to the lathe or machine spindle.

The jaws are drop forged, thoroughly case hardened and have raised and ground steps. There is no considerable strain on the binding screws in the reversible "J" jaws, as hardened steel bushings (fitted in the upper section) engage in both sections and receive the end thrust.

Bolts for attaching and key wrench for operating, furnished with each chuck.

We can furnish blank face plates for any size chuck, see next page.

Universal Chucks—Geared Screw

A Universal Lathe Chuck is one in which the jaws are all operated at once, moving to and from the center together and having a common center at all times.

These Jaws have the same features as on the Combination Chucks.

Face Plates. We can furnish from stock rough face plate castings to fit any lathe chuck. We recommend that they be fitted in your own shop or by a local machinist, as having the lathe handy, an accurate fit can be made. We can, however, have these fitted upon request. Price for blank casting **\$0.10 lb.** In ordering give diameter of recess in chuck.

Dimension A gives diameter of "flush screw" pattern Chuck. The diameter of the body of the "projecting screw" pattern Chuck is less but the space required to swing Chuck is the same as the "flush screw."

Wescott's "IXL" Independent Lathe Chuck

A, screw under jaw. B, set screw by which C is fastened. C, steel screw carrier. D, steel jaw.

In the IXL Independent Chuck, the end thrust and strain come upon the Chuck Body at its strongest point. This has been accomplished by providing each jaw screw with a steel carrier, which is threaded on one side and fastened by two set screws, one set screw following the other, and each acting as a lock to the other. One half of each set screw engages with the screw carrier, the other half with body of chuck, the set screws being long enough to secure great resistance.

Three or Four Jawed "IXL" Independent Lathe Chucks

Westcott's Scroll Combination Lathe Chucks

A scroll combination (Universal or Independent Jaw) Chuck, with spur, not bevel, gears. Jaws can be operated either independent or universal at any position. No shifting of rack or gears is necessary to operate for either movement. Jaws are reversible.

Screw heads are flush and do not project to catch on operator's clothing.

The spur pinion is operated by either a socket or open end wrench as shown in cut.

The Jaw screws are held in a steel box giving them a steel bearing on each end. Boxes are easily removed for cleaning purposes, etc.

The scroll may be rapidly manipulated by a lever engaging directly with it at the back, and increased gripping power gained by applying the open end wrench to the spur pinion.

This Chuck can also be furnished as a strictly Universal Chuck at same price.

No. 1 Style Jaws

Geared Scroll Chucks

Strictly a universal chuck, jaws working together by means of a scroll threaded plate; commonly used for holding round pieces. Small size jaws are made of special crucible steel; larger sizes of open hearth steel, carefully hardened. Designed for hard service generally and, being perfectly balanced, is also well adapted for use on high speed machines.

The three-jaw chuck is mostly used, answering all ordinary requirements in general service. Four-jaw chucks can be furnished when desired.

Chucks furnished with two sets of jaws unless otherwise ordered. No. 1 style is for gripping outside of work; No. 2 for gripping inside of work. If chuck with one set of jaws only is required, specify style of jaw.

Round and Box Body Two Jaw Chucks

Round Body Chucks

These chucks are used by all brass manufacturers. Can be furnished with either independent or universal jaws. Jaws are dove tailed for slips. Box body chucks can be furnished as shown or with hub which can be threaded to fit spindle of machine.

In ordering always state whether round or box body and independent or universal jaws are wanted.

Skinner Planer Chucks

Round Swivel Base

Square Base

For holding straight or taper work. Adjusted instantly. Jaws will not raise from the bed, are heavy and will permit of repeated dressing.

Round Base Chucks have a rib $1\frac{1}{4}$ inches wide cast on bottom to fit planer table and Square Base Chucks have a flange on all sides for clamping to planer table.

Forged steel wrench furnished with each chuck.

Massey Planer, Milling Machine, Shaper, and Drill Press Vise

With Lightning Chucking Device

The front jaw is adjustable to all shapes. For drill press the long center slot gives the drill a free range. Particularly useful on a moving table for surface grinding. When straight or taper work is chucked the jaws "C" are forced down and carry the work into the bed of vise.

Vise No.	Width of Jaw, Inches	Depth of Jaw, Inches	Jaw Opens, Inches	Weight, Pounds	List Price Each
41	4	1 $\frac{1}{4}$	9 $\frac{1}{4}$	38	\$15.00

Skinner Drill Press Vise

For use on large face plates and boring mill tables, these jaws are a satisfactory substitute for chucks. Jaws are adjustable and reversible. A rib $1\frac{1}{4}$ inches wide is cast on the bottom which adds strength and can be machined to fit slot.

All steel jaws are recommended for the heaviest work.

No.	Width Jaws, Ins.	Depth Jaw, Ins.	Jaws Open, Ins.	Shipping Weight, Pounds	Space Required, Inches	Price Each
4 $\frac{1}{2}$	4 $\frac{1}{2}$	2	5	37	14 x 5 $\frac{1}{4}$	\$15.00

7 $\frac{1}{2}$	7 $\frac{1}{2}$	2 $\frac{1}{2}$	9	98	19 $\frac{3}{4}$ x 9	30.00

Armstrong Drill Press Vise

An extremely handy vise for toolmakers and general machine shop use. One turn of handle instantly sets or releases the vise. Can be instantly adjusted to any size within its capacity. Sides are ground true and at right angles with the bottom. Will hold work perfectly true and solid as the sliding jaw draws down.

No.	Width of Jaw, Inches	Depth of Jaw, Inches	Opens, Inches	Weight, Pounds	Price Each

The Wizard Quick Change Chucks and Collets

Fig. 1.

Fig. 2.

Fig. 5.

Fig. 3.

In all classes of jig work, and wherever it is desired to use more than one tool in succession on the same job, the Wizard chuck will actually save 25 to 50% of time and labor. It converts any single spindle drill press into a multiple spindle drill press. With it all sizes and kinds of tools can be used. You can drill, tap, ream, set studs, counterbore, etc., in rapid succession, without stopping the machine and when running at any speed.

A Wizard outfit consists of one chuck for the spindle and one collet for each tool or operation on the job.

Fig. 1 is the Wizard chuck which is inserted directly into the drill press spindle or wherever it is desired to use it. Made in three sizes, and each size may be had with different sizes of Morse Taper shank to fit the machine.

Fig. 2 is a blank collet left soft for boring out to receive straight or special shanks.

Fig. 3 is the regular Morse Taper collet, furnished with various sizes of Morse Taper holes. Furnished either with or without the "No-Needa-Tang" feature described below.

Fig. 5 is the Wizard friction drive tapping collet, and when used with the Wizard chuck will obviate broken taps. It can also be used in turret lathe tapping. Each size tap has its own friction drive properly adjusted to its size. Friction slips as soon as tap bottoms meet undue resistance.

The "No-Needa-Tang" Feature

This feature is provided, when desired, on the Fig. 3 collet, and will save enough drills to pay for the complete Wizard outfit. The illustration is self-explanatory. The key is made from drill rod and is imbedded three fourths its diameter in wall of collet. When a tang is broken off a Morse Taper drill or reamer, it is only necessary to grind a flat on it or mill a groove, and the drill is good as new. It will save time and tangs, as well as the drill press spindle.

Wizard Chucks

In ordering a WIZARD outfit, decide whether size A, B or C, is desired, which depends on maximum range desired. If it will not be required to use tools with shanks larger than Number 2 Morse Taper, size A will be large enough. Any size Chuck takes smallest tools. Only difference is in maximum range.

In addition to stating whether size A, B or C chuck is desired, also state which size Morse Taper shank is preferred on the Chuck to fit the Drill Press spindle. Chucks will be furnished with shanks left soft and straight at regular prices if desired, so they may be turned to suit any special conditions. Prices on chucks with special straight or taper shanks will be furnished on application.

Prices, Wizard Chucks and Collets

Size of Chuck	Price Each	Size of Chuck Shank	Range of Fig. 3 Collet	Diam. of Collet, Inches	Largest Diam. of Chuck
A	\$6.50	Morse taper 2 or 3	Morse taper 1 and 2	$\frac{3}{8}$	$2\frac{3}{8}$
B	8.00	Morse taper 3 or 4	Morse taper 1, 2, and 3	$1\frac{1}{4}$	$2\frac{5}{8}$
C	12.85	Morse taper 4 or 5	Morse taper 1, 2, 3 and 4	$1\frac{5}{8}$	$3\frac{3}{8}$

In ordering Wizard Collets, give number and state size of chuck, (A, B or C).

Collets

Magic Chucks and Equipment

The Magic chuck is designed for use in the spindles of drill presses, lathes, screw machines and other revolving spindle machines. Permits rapid changing of tools without stopping the machine. It practically converts a single spindle machine into a multiple spindle one with as many holes as you have tools to use.

This is made possible by the use of collets for holding various kinds of tools, which may be rapidly inserted and withdrawn from the chuck, effecting a great saving in time.

Modern Tapping Attachments

Equipped with Skinner Chuck

Equipped with Magic Chuck

The "Modern" tapping attachment is used in any machine having an upright revolving spindle and is valuable for doing successive operations, such as drilling a hole, tapping it and setting a stud, without removing the work.

This attachment is new in construction and has many improved features. It drives tools through holes or to a bottom and is easily adjusted to stop automatically at any desired point. It will drive tools in, stop automatically and by simply raising the spindle will back out without stopping or reversing the machine. Raise the lever as soon as the gears release and the tool will immediately back out with an accelerated reverse motion. No reversing of belt required. Not only saves time, taps and handling but does better work.

Skinner chuck.....	\$2.50	\$2.50
Tap size, inches.....	1/8 to 3/8	3/8 to 1

Drill Chucks

The Almond geared nut chuck is small in diameter and carries a large drill.

Geared teeth on a tool steel nut meshing with an unbreakable tool steel pinion of large diameter gives a direct drive with increased tightening power.

The bushed pinion holes do away with elongating of the holes in the chuck body. This insures a perfect contact when the pinion is in mesh with the gear teeth on the nut.

Any Almond pinion showing wear or breakage, if returned to the Almond Company will be replaced without charge.

It is accurate, well balanced, powerful and easily operated.

The most expensive factor in the up-keep of geared chucks has been the replacement of the case hardened ferrule and pinion. This excessive and needless expense has been eliminated in the new Almond geared nut chuck. Note the wide teeth on tool steel nut and pinion.

Its construction insures long life, with practically no cost for maintenance.

Horton-Morrow

A hand-operated, ball-gearing drill chuck, self-tightening, with automatic grip. No wrench is needed. Drives high speed drills without slipping. Releases quick without resistance. Does not mar the shank of tools. Head of chuck and threaded ring, thoroughly hardened and ground, between which the ball bearings are placed, insuring long life and durability. Jaws are made of special alloy high carbon steel. Ground all over and are strictly interchangeable. Drills will run true from shank to point in this chuck.

Drill Chucks

"Little Giant" Double Grip

One of the best and most powerful chucks made for use on bolt cutting and screw machines for holding iron to be threaded with a die or for any work where a chuck of extra strength is needed. This chuck has a forged steel cap which acts

not only as a clamp, but having flanges, becomes a tie plate. This tie plate is applied to back of jaws and is independent of other adjustments.

No.	Price Each	Capacity, Inches	Diam., Inches	Lgth. Body, Inches	Extra Jaws, per Set	Screws, Price Each
0	\$ 9.00	0 to 1/2	2 1/2	3 1/2	\$3.60	\$1.65

4	25.00	0 to 2	6 1/2	4 3/4	9.60	4.80

*Extra strong.

Sizes No. 0 to No. 2 1/2 are for use with Arbor.

Nos. 3 and 4 are for face plate.

When ordering duplicate parts, state whether chuck is stamped with a * or not, and if so, whether it is stamped refitted. Also state of manufacture (not date of patent) stamped on end (number of month and year), and whether Little Giant Improved or Little Giant Double Grip.

Little Giant Auxiliary Screw

1/2 to 1 1/4-inch, Inclusive

1 1/2 to 4-inch

The auxiliary screw entirely overcomes the tendency of gripping part of jaws to crowd away from right and left hand screw and outer end to draw toward it, which tendency is found in all side screw chucks. This auxiliary screw also greatly increases the gripping power of chuck.

Size, Inches	Price Each	Capacity, Inches	Jaws per Set	Right and Left Hand Screw	Auxiliary Screw
1/2	\$ 9.00	0 to 1/2	\$ 4.45	\$ 1.65	\$0.70

Standard Improved

This is a very serviceable chuck for holding round or square work. It has no projecting jaws, and the plate prevents the chuck from being used on larger work than it is intended.

Jaws are guided by three gibs, and the operating screw is larger than is usually furnished with this type of chuck. Hole in back is tapered to receive arbor, but can be bored out and threaded by customer if desired.

No.	Price Each	Capacity, Inches	Diam. Body, Inches	Lgth. Body, Inches	Jaws per Set	Screws, Price Each

Skinner "Positive Drive"

The positive driving section of the positive drive jaws adjust with the friction or centering jaws, so that fastening of tool is done in one operation. It is unnecessary to grip tightly with the friction jaws, insuring accuracy and prolonging the life of the chuck.

No.	Price Each	Capacity, Inches	Diameter, Inches	Length, Inches
50	\$ 8.00	0 to 3/4	1 1/2	2 1/4
51	9.00	0 to 1	1 3/4	2 3/4

53	12.00	0 to 1 1/2	2 3/4	3 1/4

National Round Body Triple Grip

This chuck is made with three distinct grips that can be applied to the same tool at the same time, if necessary, or independent of each other, which makes it a positive gripping chuck.

It is not necessary to use each of these grips in all classes of work, but when needed will be found

very convenient to hold the tool positive.

Jaws and screws made from tool steel and carefully hardened.

Drill Chucks

Weaver's Roller Jaw

Drives straight shank drills without slipping. Does not mar or bruise drill shank. Especially adapted for high speed work and heavy service.

Three hardened steel rolls acting between shank of drill, and three cam faces of inner walls of body constitutes the entire construction and operation of chuck.

The grip of the rolls or jaws increases automatically with every ounce of pressure thrown on the drill. The cage spaces and controls the rolls upon the cams.

The rolls are hardened tool steel ground absolutely true. A slight pressure brings them into contact with shank of tool and the grip increases in proportion to the working resistance.

Arbors, straight or taper shank can be furnished. State size desired when ordering.

Solid One-Piece Body

Solid One-Piece Cage

Roller Jaws

No.	Price Each	Capacity, Inches	Diameter of Body, Inches	Length of Body, Inches	Approx. Weight, Pounds

The Almond Turret Head Tool

Lowers the cost and increases the accuracy of duplicate work by converting an ordinary lathe into a six tool turret lathe.

No.	Diameter, Inches	Socket Holes, Inches	Weight, Pounds	Price Each
1	3 1/2	5/8 x 1	3 1/2	\$13.00
2	5 1/4	3/4 x 1 1/2	14	25.00

Star

This is a strong, well finished and accurate drill chuck, holding round or square work, at a moderate price.

It has three jaws, carefully adjusted in a socket, opening with a spring and closing with pressure from spindle. Springs are protected from injury and will not get out of order.

Made with round straight shank or Morse taper. In ordering always specify kind and size of shank desired.

No.	Price Each	Capacity, Inches	Diam. Body, Inches	Diam. Shank, Inches	Length Shank, Inches	Approx. Weight, Ounces
5	\$2.25	0 to 1/4	1	1/2	1 1/2	7

Agrippa Turning Tool Holders

The maximum of economy, strength and efficiency and relief from the troubles common to this class of tools, is assured in the Williams' "Agrippa" tool holders.

The cam-fastening is always rapid and positive—the greater the pressure the tighter the lock. It offers full freedom for operation without removal from tool post, and imposes no obstruction to cutting facilities. Both types of cam are interchangeable, and extra cams can be furnished at a slight extra charge.

The form in which cutters are furnished requires the minimum of grinding for either right or left hand usage. Unless otherwise specified hexagon head cam will be furnished.

Agrippa Boring Tool Holders

Furnished with plain or sleeve bar, cutter and hardened wrenches.

With this excellent holder, encumbering sleeves or bushings are unnecessary for interchangeable bars. Commercial forms of bar steel are adaptable without machining.

The sleeve-bar fastening provides for the rapid adjustment of either straight or angular cutters without the use of extra parts; it has greater strength than others of the same general design. Plain bar provides for use with either straight or angular cutters in the simplest manner possible, and is furnished with headless set screws.

Unless otherwise specified maximum size sleeve-bar will be furnished.

Agrippa Threading Tools

Furnished with special headless cam lock nut, alloy steel cutter and hardened wrench.

A highly perfected tool for fine or coarse threading or other lathe work. The nut for lockable-spring head provides for the perfectly rigid backing required for coarse threading and heavy cuts, and when it is loosened the holder becomes a spring-tool for finishing work. It is equally excellent used as a turning-tool holder, for which purpose the self-hardening or high speed cutters furnished with the turning-tool holders can be supplied.

The cam-fastening is always rapid and positive—the greater the pressure the tighter the lock. It offers full freedom for operation without removal from tool post and imposes no obstruction to cutting facilities. Extra cams can be furnished at a slight extra charge.

The cutter, made from highest grade of alloy steel, is ground all over to special size, the point forming an angle of 60 degrees.

Agrippa Special Cutter Tool Holder

For Lathe, Planer and Shaper
"The Holders That Hold"

A universally efficient and high-class heavy service tool, whether used with lathe, planer or shaper—practically equal to hand-forged tools, and vastly more economical.

The holder is composed of but three parts, all of which are of assured greater simplicity, strength and wearing qualities.

The cutters, which are furnished separately, are drop-forged from high speed steel, and have greater diameter of shank than is commonly supplied—breakage minimized.

The headless cam fastening imposes no obstruction to complete length of cuts. Furnished with either headless or square head cam and hardened wrench.

Unless otherwise specified square head cam will be furnished.

No.	Holder, Size	Height from Point of Cutter to Bottom of Shank	Cutter Shank, Diameter	Price

Agrippa Planing Tools

Furnished with one cutter and hardened drop-forged wrench. A rugged, substantial tool of absolute efficiency and great dependability on either lathe or planer. Because of its numerous angles of adjustment it also makes an excellent offset turning tool.

The construction assures perfect seat and holding quality for the cutters; the convex face of clamp nut provides uniform locking pressure for cutters of either square or rectangular form; the serrations in holder provide for quicker, finer and maximum number of cutter adjustments.

The serrated washer, or adjustment ring, which receives fastening and working impact, is hardened and tempered—relieves holder of wear.

Agrippa Drop Head Turning Holders

Right Hand

Left Hand

Designed for use on lathes with clamp-tool rests and low centers, and excellently adapted for shaper and planer work.

The cam-fastening is always rapid and positive—the greater the pressure the tighter the lock. It offers full freedom for operation without removal of holder from tool post, and imposes no obstruction to cutting facilities. Both types of cam are interchangeable, and extra cams can be furnished at a slight extra charge.

The form in which cutters are furnished requires the minimum of grinding for either right or left hand usage.

Unless otherwise specified Hex Head Cam will be furnished.

Agrippa Knurling Tool Holder

The knurls, fitted in a revolving head, provide for coarse, medium and fine work, and a minimum of time losses common in changing them. Like the pins or axes, they are made from hardened and tempered crucible tool steel. Furnished with three pairs of knurls as illustrated.

Number	Holder, Size	Standard Knurls Size	Price	
			Knurls Pair	Complete Holder
11-K	$\frac{1}{2} \times 1 \frac{1}{4} \times 6 \frac{1}{2}$	$\frac{3}{8} \times \frac{3}{4}$	\$0.75	\$6.00

Champion Straight and Offset Tool Holders

Will not break taking heavy cuts on rapid work, because, with the support, under cutting edge of tool holder will not mash down under the continual strain of cutting. Cutters can be used up close to the shoulder, thus effecting a saving in expensive steels, while the shape of the head allows use of large cutters. Points of screws are hardened and extra large.

Armstrong Tool Holders

Armstrong Tool Holders are convenient, economical, efficient and meet every requirement of the average machine shop. The holders are drop forged from special steel, screws are made from tool steel and the cutters can be furnished made from either self-hardening or high speed steel. These tools have every advantage over those made of one piece of steel, as the cutters can be replaced at a very small cost.

Straight and Offset Tool Holders

Each tool is carefully packed in a cardboard box, and price includes one drop forged wrench and one cutter ground to shape.

Improved Lathe
Tool Post

It is stronger and stiffer than the ordinary tool post, will not slip or chatter and consequently it will do more accurate work.

As there is no side projection, it is peculiarly adapted for working close up to the chuck.

It has a great range of adjustment without loss of holding power, as the rocker jaws adjust themselves on parallel lines.

The open side design permits rapid and convenient change and adjustment of tools.

Armstrong Tools

Cutting Off Tools

Straight Shank

Left Hand Off-Set

Right Hand Off-Set

The nature of the work renders occasional breaking of cutting-off tools unavoidable and in the case of forged tools it involves reforging and grinding, the lathe meanwhile standing idle; with the Armstrong Cutting-Off Tool the delay is but momentary, as the blade can be extended and then sharpened in a few minutes. The blades are beveled on both sides and are held on an angle with proper clearance and rake to insure a clean cutting tool.

Armstrong Tools

Threading Tools

Simplicity, strength, and permanence of adjustments are prominent features of this tool. Cutters require grinding on top edge only, to sharpen, and always remain true to form and of correct angle, insuring perfect fitting threads. Cutters are backed off to afford proper clearance. Each tool is provided with one single point cutter V. United States or Whitworth Standard and a drop forged wrench.

*V Thread only. †Not made in Whitworth.

Prices

Single point cutters are the type mostly used. Chasers have a double tooth and are used principally for shaping top of thread.

Tool Number	Kind	U. S. Std., V. Std. and Whitworth Std. Form	
		High Speed	Carbon Steel
00T & 50	Sgl. Point	\$1.50	\$0.75
51	Sgl. Point	1.80	.90
52	Sgl. Point	2.30	1.15
53 & 54	Sgl. Point	2.80	1.40
55	Sgl. Point	3.95	1.95

Note.—When ordering cutters (except single point V cutters) it is necessary to specify exact pitch or number of threads per inch.

Planer Tool

Costs less than a High Speed Forged Tool.

Fig. A shows Planer Tool cutting keyway with cutter reversed and tool turned around, thus throwing cutting point behind center of tool and working as a "goose neck" tool.

Fig. B shows Planer Tool at work in close corners, giving a good general idea of clearance obtained. It shows also a few angles at which cut can be set.

Price includes wrench and two cutters.

Gang Planer Tool

For surfacing large castings the tool will effect a saving of 50 to per cent in time required to do the same job with a single point tool. The head is graduated, thus enabling tool to be quickly and accurately to any desired feed. This makes possible to always have the tool cutting at the greatest speed practicable on metals of varying degrees of hardness. It will carry with a feed and depth of cut much greater than is possible when using an ordinary tool, and there is much less tendency to "break out" at end of cut.

Boring Tools, Less Shank

In many cases it is very convenient and desirable to have a boring tool equipped with bars of different sizes. We are prepared to furnish extra bars, these extra bars, to be of practical use, must necessarily be equipped with wrench, caps, etc., making it a complete tool with exception of the shank. Price includes bar with straight and 45 deg. end caps, cutter, wrench and bushing. No bushing with Nos. 8, 014, 015.

No.	Price Each Complete With High Speed Cutters	Dimensions of Bar Diam. Ins. Lgth. Ins.	Size of Cutter Ins. Square	With Bushing to Fit Shank Number

115	20.25	2 $\frac{3}{4} \times \frac{1}{2}$	$\frac{1}{8}$ 30	$\frac{1}{8}$	62

A slight turn of one nut releases or fastens both bar and holder.

Bars can be changed as needed instantly, allowing operator to use stiffest bar possible for each job, with result that speeds and feeds are increased.

Only one wrench required.

Three Bar Boring Tool

Set consists of holder and three boring bars, with straight and 45 degree end caps and cutters, a piece of each size steel for extra cutters and one wrench.

No. of tool	1-B	2-B
Length of bars	\$ 11, 16	9, 13, 18

Set with high-speed cutters	\$22.75	\$30.00

Weight, pounds 51 76

Extra cutters are listed in opposite column. When not otherwise specified, self-hardening cutters will be shipped.

Note.—Bolt head and bottom part of holder are made of ample size to allow for fitting, which is necessary on account of the great variation in height of centers above slide rest and difference in sizes of T slots.

Fitting.—An extra charge of \$3.00 net will be made for tools ordered fitted to special dimensions.

Armstrong Tools

Slotter Tool with Hollow Bar

For exceptionally heavy duty work. Will rotate for working into corners and difficult positions. Cutter makes clean curling chip without excessive top grinding. Has spring relief block which relieves cutter point on return stroke.

Lathe Tool Cabinet

Especially Adapted for Armstrong Lathe Tool Sets

These handsome cabinets not only add to the systematic and orderly appearance of the shop, but they will save much time that is ordinarily wasted hunting for mislaid tools, as they keep together each man's tools, chuck, waste and other equipment within easy reach at all times. They also conform to the modern shop practice of replacing wood with non-combustible materials wherever possible, and furnish separate, automatic closing receptacles for clean and oily waste, as required by the insurance rules.

No.	Price Each	Dimensions, Inches	Suitable for Lathe Tool Sets

These high speed tool bits contain from 16 to 18 per cent tungsten and are ready for use, requiring grinding only.

Furnished with plain ends, easily ground to the shapes shown or to special shapes if required.

Knurls or Milling Wheels

Letters Indicate Pattern or Design

Numbers Indicate Shape and Width of Face

The designs shown are the ones most commonly used. If a special pattern is desired, send sample or impression. In ordering, state pattern and shape wanted.
 Price each \$0.50 Per pair \$1.00
 These knurls will not fit either the Armstrong or Billings knurling tool.

Adjustable Knurl Handle

For holding the knurls or milling cutters listed above, or other knurls up to 1/4-inch thick. Parallel sides. Length, 9 inches.
 Price each \$1.00

Billings Improved Knurling Tool For Use in Engine Lathe for Knurling Metal

The movable arms holding the knurls, in connection with the rocking joint, have a positive opening and closing movement in parallel lines, actuated by a right and left hand screw moving the knurls to and from each other. Weight of tool about 1 1/2 pounds. Shank 1/2-1.

Price of holder, with one pair of knurls, each \$5.00

Knurls for Billings and Armstrong Knurling Tools

Furnished coarse, medium and fine. Same as styles D, E and F above. When two are used together they will produce the checked type as J, K and L. 3/4-inch diameter, 1/4-inch wide, 1/4-inch hole. Extra knurls, price per pair \$1.00

Armstrong Knurling Tool

A good knurling tool should be self centering with as little lost motion as possible, and the knuckle or joint must have ample bearing to resist the severe strains of both end and side thrust. In both of these essentials as well as in general design and high quality of material and workmanship the Armstrong knurling tool is unexcelled.

No.	Size, Inches	Price Each, Complete	Approximate Weight, Lbs.
1-K	1/2 x 1 1/8 x 6 1/2	\$4.50	1 1/2

Armstrong Knurling Tool With Revolving Head

The advantages of this tool are apparent at a glance. The revolving head is fitted with three pairs of knurls, fine, medium and coarse, either of which can be used without the inconvenience and loss of time incident to changing knurls.

No.	Size, Inches	Price Complete	Weight, Pounds
3-K	1/2 x 1 1/8 x 6 1/2	\$6.00	1 1/2

Drop Forged Lathe Dogs

Drop forged from a special grade of open hearth steel, which is extremely tough and at the same time possess the stiffness so essential in a good lathe dog. Hubs are large enough to permit retapping. Safety and square head screws are not interchangeable. In ordering state which style is wanted. Price of Safety Dogs does not include wrench, but wrench is furnished with Safety Dogs unless otherwise ordered. Threads on all dogs are United States Standard. Square Head Screw Dogs are furnished unless otherwise ordered. Dogs with straight tail furnished at regular prices.

Armstrong "U"

Clamp Lathe Dog

This dog is so constructed as to combine the convenient features of the clamp dog with the simplicity and strength of the ordinary lathe dog. It will accommodate itself readily to work of any shape and will hold it securely and squarely, being especially adapted for use on finished work which would be liable to be damaged by the set screw of a common lathe dog. The sliding jaw is operated by a loose fitting U bolt, and can be adjusted to size very quickly, a wrench being necessary to tighten only. One advantage of his dog is that it can be applied without removing work from centers. It possesses a wide range of adjustment.

No.	Price Each	Capacity, Inches	Weight Pounds
1	\$0.65	$\frac{3}{8}$ to $\frac{5}{8}$	$\frac{3}{4}$
2	.90	$\frac{1}{2}$ to 1	$\frac{1}{2}$

5	2.90	$\frac{3}{4}$ to 3	$\frac{1}{2}$
6	4.00	1 to 4	$1\frac{1}{2}$
7	5.00	$1\frac{1}{2}$ to 5	20

Adjustable Center Combination Lathe Dogs

For holding all kinds of crank shafts, such as used in automobile and marine engines, eccentrics, etc., as well as any straight work where a common lathe dog can be used.

The turning up of a crank shaft has always been done under difficulties, except in shops where they are made in large numbers, on specially designed machinery.

Pair

With the use of a pair of crank shaft lathe dogs, the operation is made quick and simple. The work is first entered by laying off and centering in the drill press in the lathe with the use of a steady rest. The driving dog is fastened on one end and the work placed between centers. The straight or tailless dog is fastened on the other end.

The dogs are light yet strong, with the weight just here it is needed. The adjustable centers take the place of a dozen pairs of old style heavy blocks.

Made in the two sizes priced below. Adjustable the dogs under 2 inches or over 8 inches made to order.

to 6 in. swing. Holds $1\frac{3}{4}$ in. stock. Price each. \$10.00
to 8 in. swing. Holds $2\frac{3}{8}$ in. stock. Price each. 20.00

Steel Dog Wrenches

Fitting screw heads from $\frac{3}{8}$ to $\frac{3}{4}$ inch square. Will answer for both dogs and tool posts.

Price each. \$0.30

Armstrong Clamp Lathe Dog

The under face of screw heads is convex, fitting into a concave seat, and as the holes in upper bar are larger than the screw, this allows for considerable tilting without bending the screws. The clamp bars are forged from a stiff open hearth steel, carefully machined and hardened.

No.	Price Each	Distance between Screws, Inches	Weight, Pounds	Extra Screws, Each
A11	\$1.50	$1\frac{1}{4}$	$\frac{3}{4}$	\$0.10
A12	2.00	$2\frac{1}{4}$	1	.15
A13	2.50	$3\frac{1}{4}$	$1\frac{1}{4}$.20
A14	3.50	$5\frac{1}{2}$	$2\frac{1}{4}$.30

Clamp Dog with Swivel Jaws

Illustration shows the clamp dog holding a piece of tapered steel. Top jaw rolls in eye of screw, conforming to taper of material held, holding it securely. The dog can also be used with straight material. The swivel jaw feature makes this tool indispensable for the machine shop.

No.	Price Each	Distance between Screws, Inches	Weight, Pounds	Extra Screws, Each
B00	\$0.75	$\frac{3}{4}$	$\frac{3}{4}$	\$0.10
B0	1.25	$1\frac{1}{4}$	1	.10

4	3.00	$4\frac{1}{4}$	$2\frac{1}{4}$.20

H. Channon Company Chicago

Williams Drop Forged "C" Clamps

Improved Drop Forged "C" Clamp

These are drop-forged from a strong, tough grade of carefully selected steel and their form is such as to utilize the metal to the greatest advantage.

They are submitted to a special refining process or "heat treatment" after forging which increases their stiffness and strength and reduces the liability of springing.

The screws, threaded U. S. standard, are made of a special grade of steel, well adapted to the purpose and are hardened and tempered; given lengths are under-head dimensions.

In respective order as per table the minimum capacities of clamps are approximately as follows: $\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{1}{2}$, 2 , $2\frac{1}{2}$, $3\frac{1}{2}$, $4\frac{1}{4}$, $6\frac{3}{4}$, $7\frac{3}{4}$.

For convenience of dealers, each clamp up to 8-inch size, is packed in a box.

Extra Heavy Steel Machinists' Clamps

These clamps are of extra heavy malleable iron and will stand the most severe service.

The foot on the clamp is planed and the screw is provided with an oscillating tip.

No.	Price Each	Capacity, Inches	Depth of Throat, Inches	Size of Screw, Inches

Price each.....	.75	.90	1.10	1.35		

Colts Eccentric and Adjustable Screw Clamps

To operate the eccentric clamp place the button on end of clamp against the work and slide the moveable jaw against the opposite side of the work. Raise the lever and moveable jaw is instantly, and continuously jarring will not loosen it.

The screw clamp is operated similarly, except that tension applied by turning screw instead of merely raising a lever. Same price for either style.

*These sizes furnished with eccentric clamp only.

Colts Extra Heavy Clamps

We can furnish these clamps made extra heavy throughout sizes 12 to 72 inches. Prices upon request.

Cabinet Makers' Malleable Clamp

These fixtures, attached to hardwood bars, make a strong, light and easily operated wood frame clamp. The screws are ½ inch diameter, 7 inches long with deep square cut threads at stem rolled steel. The sliding head is supported by malleable sides, thus relieving the screws of any bending strain when clamping irregularly shaped or thin stock. They also keep the head from turning when applied. The heads are easily hung and will not get loose or out of line with the frame. Mounted on ear maple bars, oil finish; size, 1½x2½ inches.

Price per set, fixtures only.....	Dozen	Each
Price each, mounted on 3-foot bar.....	\$10.80	\$1.05

5	26.40	2.60	18	14

Wood Hand Screws

The jaws of these hand screws are made of well seasoned Michigan hard maple, sanded and oiled.

Spindles are made of selected second growth hickory, air seasoned, and are tough and practically unbreakable. The threads do not lessen the natural strength of the wood in these spindles, the thread being saw cut with a special machine which does not tear and bruise the grain of the wood.

Williams' "Vulcan" Drop-Forged Strap Clamps

Single End

Double End

Plain Slot Pattern

Adjustable Step Pattern

U Pattern

Gooseneck Pattern

These forgings are made from a strong, tough grade of carefully selected steel and are put through a special process after forging which increases their strength and stiffness.

On planer, lathe, drill press, milling and boring machine work they are time saving and effective.

Drop Forged Crank Handle

Unfinished are plain forgings without hole in hub.

Bronched have holes finished and hubs counter-bored in free end.

Finished are bronched, counterbored, ground, polished, casehardened all over and lacquered to prevent rusting. Smaller openings than standard and special sizes, running by sixteenths from 1/2 to 1 inch, inclusive, and thence by eighths, can be bronched to order in

quantities. We can also furnish hubs of shorter lengths and offset handles in quantities at additional prices. Otherwise same as above.

Drop Forged Machine Handles

Unfinished handled are smooth enough for use or can be polished without machining.

Finished handled are centered, turned and polished; machined all over and only require fitting.

Number	Extreme Length	Standard Length Shank	Diameter Shank	Price
00	2	1 1/2	1/8	\$0.07

6	4 1/4	1 3/4	1/8	.33
7	4 3/4	1 3/4	1/8	.40

Drop Forged Balance Handle

Unfinished are plain forgings without any hole in hub.

Bronched have hole finished but are otherwise plain forgings.

Finished are bronched, ground, polished, casehardened all over and lacquered to prevent rusting. The bronched openings are made with corners slightly rounded to prevent breakage and a slight clearance is provided.

Holes are regularly finished to standard sizes given below. Smaller openings than standard and special sizes can be bronched to order in quantities. Handles can also be supplied with round holes in hub; details on application.

Williams Drop Forged Steel Wrenches

The steel from which our drop forged wrenches are made is selected for this particular purpose. Every detail of forging, milling and finishing is given closest attention. All drop forge, steel wrenches will be furnished under the following headings:

"Unfinished"—Plain forging, not hardened with openings either milled or unmilled. Milled openings sent unless otherwise ordered.

"Semi-Finished"—Edges ground, case hardened, heads bright, openings milled.

"Finished"—Openings milled, ground, polished, case-hardened, lacquered, with heads finished bright.

Unless otherwise ordered we will fill all orders with Semi-Finished Wrenches.

Williams Drop Forged Steel Wrenches

Heavy Cap Screw Wrenches

15° Angle, Double Head

For Hexagon Head Cap Screws

This is a line of extra weight designed to withstand the strain in turning cap screws, and is considerably stronger than the screws themselves. *For smaller sizes and lighter cap screw wrenches, see other pages.

In stock with openings for U. S. Standard Hexagon Head Cap Screws; Whitworth Standard, Metric Measure or special openings milled to order.

Mossberg Ratchet Socket Wrench Handle

No. 350

All steel, reversible ratchet, the lightest and strongest wrench made. Finest quality of steel, full nickel plated. Length 10 inches over all.

Price.....\$2.00

Mossberg Ratchet Socket Handle

No. 355

Socket shank fits the square opening and is firmly held by a tension spring.

The wrench is reversible by turning over, of steel construction. Finished dead black. Eight inches long.

Price.....\$1.00

Mossberg Ratchet Wrench

For Reverse and Brake Pedal Tension Springs for Ford Automobile.

No. 645

A clever and efficient tool at a low price.

Price each.....\$0.50

Mossberg Connecting Rod Wrench

For No. 4 Connecting Rod on Fords.

No. 623

The fourth connecting rod on a Ford is so situated that its adjustment requires a special wrench as here shown. Thoroughly hardened, with mottled finish.

Price each.....\$0.30

Mossberg Triple End Cylinder Head and Rear Axle Housing Wrench

No. 630

Large socket on double end. Provides great leverage to start or tighten cylinder head nuts. Single end twists the nuts rapidly after being loosened.

Small socket on double end is tapered to fit nuts on rear axle housing. No other wrench will carry these nuts.

Price each.....\$0.35

Socket Wrenches

William's Drop Forged Single Head Socket Wrenches With or Without Pin-Handle For Hexagon Nuts and Cap Screws

Straight
Pattern
with
Pin-
Handle

Offset Pattern
A full line of
this Offset

Channon Ratchet Wrench

Made from the best malleable iron with all parts broached to accurately fit together. Set consists of 8 each square and hexagon sockets for nuts from $\frac{1}{4}$ to $\frac{3}{4}$ inch. Will fit all standard size nuts, cap set and lag screws. Extension is of cold rolled steel tubing. The ratchet handle is very durable and reversible. The drill attachment, when used with ratchet handle, makes a perfect working ratchet. The socket of the drill attachment is bored for $\frac{1}{2}$ -inch diameter shank blacksmiths' drills.

Price per set,\$5.00

No. 10 Socket Wrench Set

The No. 10 is an ideal set of moderate size for automotive work. We particularly recommend this for a modest set, as one which covers a wide range. Consists of 21 sockets.

Hex. $\frac{1}{2}$, $\frac{3}{4}$, 1 , $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2 , $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3 , $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$, 4 , $4\frac{1}{4}$, $4\frac{1}{2}$, $4\frac{3}{4}$, 5 , $5\frac{1}{4}$, $5\frac{1}{2}$, $5\frac{3}{4}$, 6 .
Spark Plug Sockets, $3\frac{1}{4}$ x 4 inches long. 1 $3\frac{1}{4}$ x 4 inches long.
No. 350. Reversible Ratchet Handle. Universal Joint.
Long Extension Tube. 2 Sizes Screw Driver Bits. Packed in Wooden Box.
Price of Set complete,\$9.00

No. 13 Socket Wrench Set

Contains all important hexagon sockets. Furnished in wooden case containing Ratchet Socket, Wrench Handle No. 355, Extension Tube No. 351, 9 $\frac{1}{2}$ inches long, fifteen modified, thoroughly hardened, pressed steel sockets as follows: $\frac{1}{2}$, $\frac{3}{4}$, 1 , $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2 , $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3 , $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$, 4 , $4\frac{1}{4}$, $4\frac{1}{2}$, $4\frac{3}{4}$, 5 , $5\frac{1}{4}$, $5\frac{1}{2}$, $5\frac{3}{4}$, 6 .
Spark Plug Socket, 4 inches long.
Price per Set,\$3.50

Ford Socket Wrench Set No. 33

Five sizes of sockets that fit the nuts that need most adjustments, as follows: $\frac{1}{2}$ inch tapered, $\frac{3}{4}$ inch tapered, $\frac{1}{2}$ inch (cylinder head nuts), $\frac{3}{4}$ inch oval for main bearing nuts and bolts, $\frac{1}{2}$ inch hexagon socket is tapered for rear axle housing nut, and $\frac{3}{4}$ inch hexagon socket is ground to properly fit engine base bolts. Has double-end vertical or offset handle. Enamelled duck case.
Price per Set,\$1.10

No. 14 Complete Socket Wrench Set

This is probably the most complete wrench set made and is intended for every sort of work. It has 51 wrenches with 55 openings, and with the clever reversible handle, the splendid range of sockets, the full set of offset ends—all make this set a wonderful box of tools.

The set consists of the following pieces:

37 Hexagon and Square Sockets.
Hex. $\frac{1}{2}$, $\frac{3}{4}$, 1 , $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2 , $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3 , $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$, 4 , $4\frac{1}{4}$, $4\frac{1}{2}$, $4\frac{3}{4}$, 5 , $5\frac{1}{4}$, $5\frac{1}{2}$, $5\frac{3}{4}$, 6 .
Square. $\frac{1}{2}$, $\frac{3}{4}$, 1 , $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2 , $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3 , $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$, 4 , $4\frac{1}{4}$, $4\frac{1}{2}$, $4\frac{3}{4}$, 5 , $5\frac{1}{4}$, $5\frac{1}{2}$, $5\frac{3}{4}$, 6 .
Spark Plug Sockets, $\frac{3}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, each 4 inches long
No. 350. Handle (Reversible Ratchet).
No. 340. Take Down "T" Handle.
No. 320. Offset Handle.
No. 1. General Service Set Open-end Wrenches—5 Wrenches, 10 Openings.
Universal Joint.
3 Sizes Screw Driver Bits.
No. 1 Cutter Pin Tool.
No. 470. Gripsall Pipe Wrench.
Put up in Wooden Box.
Price of Set Complete,\$12.00

For a more complete line of fine ratchet wrenches, refer to index.

Spark Plug Socket Wrenches

These wrenches can be applied instantly to the spark plug despite any construction of cylinder head and save burning the fingers and breaking the porcelain. Made of heavy pressed steel.

Single end spark plug wrench with wire handle:
No. 401. Length, 4 in.; opening, $\frac{3}{8}$. Price each \$0.40
No. 411. Length, 4 in.; opening, $1\frac{1}{2}$. Price each,40

Double end spark plug wrench with wire handle:
No. 461. Length, 4 in.; openings, $\frac{3}{8}$ and $1\frac{1}{2}$. Price each \$0.50

Pressed Steel Sockets

These sockets fit the nut or bolt head instantly and exactly and require but little space to operate. Made of heavy pressed steel. Order by stating size of socket wanted.

Bit Brace Extensions

For operating sockets by means of an ordinary bit brace. Made in 3-inch, 6-inch and 9-inch lengths. For work difficult of access.

370A, 9 inches long; 370B, 6 inches long; 370C, 3 inches long. Price per set \$1.20

Any size separately60

All three extensions fit all sizes standard sockets.

Offset Socket Handle

No. 320. Offset handle, mottled finish; length, 10 inches. Price each \$0.40

This wrench will fit the pressed steel sockets shown on this page.

Williams' Demountable-Rim Tool

Patented in the United States.

Drop-forged from a strong, tough grade of specially selected steel, each working part is tempered specially for its intended use. The hammer and face of wrench are polished bright; otherwise the tool is black-finished.

It thoroughly replaces and reliably cares for the work of individual screw driver, special wrench, hammer and tire tool, for the rapid execution of demountable rim and new tire work—all tools for these purposes in one.

Hexagon Socket Opening Across Flats, Inches	Length Overall, Inches	Weight	Price Each
$\frac{3}{8}$	$9\frac{1}{2}$	1 lb. 6 oz.	\$1.00
$\frac{1}{2}$	$9\frac{3}{4}$	1 lb. 6 oz.	1.00
$\frac{5}{8}$	$9\frac{1}{2}$	1 lb. 6 oz.	1.00

List showing sizes of nuts on rims which are usually fitted to the cars mentioned:

$\frac{3}{8}$ -inch: Cadillac, Hudson, Hupmobile, Studebaker.
 $\frac{1}{2}$ -inch: Apperson, Cole, Locomobile, Marion, National, Packard, Pathfinder, Pierce Arrow, White, Winton.

$\frac{5}{8}$ -inch: Buick, Chalmers, Dodge, King, Oakland, Oldsmobile.

Specify size when ordering.

Spark Plug Wrenches

Drop-forged from steel and designed for convenient service about automobiles, motor boats, gas engines, etc., and equally adaptable for use upon flush or depressed plugs.

Thin Double End Wrenches in Sets

These double-end wrenches, are made from pressed steel, and being hardened and tempered, are strong as drop forged wrenches. All have mottled finish. The semi-finish have square edges; the finished, round edges; and the extra finish have round edges with heads, bright and lacquered. One advantageous feature of this wrench is that they are thin and can be used in places where the ordinary wrench is not accessible. They have a straight bar, but the openings are offset at an angle of 20 degrees. The openings are milled to size. Packed in canvas case or cardboard box.

Set No. 1—General Service Set

Sizes of Openings, Inches	Length, Inches	Thickness, Inches	Price per Set		
			Semi-Finished	Finished	Extra Finish
1/4 & 3/8	3 3/4	5/16	In Canvas Case

Packed in natural wood box with sliding cover.

"Marvel"

Socket Wrench Adjustable

Gives a positive grip on either square or hexagon nuts, 1/4 to 1 1/4 inches. Will also work to advantage on an offset. Takes the place of a great number of socket wrenches and will not mutilate or jam the nuts in any way. With the extension it can be used in places not accessible to the ordinary wrench. Handle works with ratchet. Made of drop forged tool steel. Price each.....\$3.50

The W. & B. Auto Wrench

A strong wrench with head and bar drop forged in one piece from open hearth steel. Adapted for automobile and other work where a wrench with thin jaws is required. Thickness of head 5/8-inch. Jaws open 1 1/2 inches. Length, 10 inches. Price each.....\$1.50

Channon Adjustable Auto Wrench

Drop forged from high grade steel; malleable jaw; case hardened. A most substantial wrench for automobile, motor boat, bicycle or general use. Length, 9 inches. Opens 2 1/2 inches. Price each.....\$0.50

Billings Adjustable Auto Wrench

A very strong and serviceable wrench for use on the road. Made of drop forged steel throughout.

W. & B. Wrenches

Machinist's Knife Handle

Railroad Special

Machinist's Steel Handle

Machinist's Knife Handle Wrench. The head and bar drop forged in one piece, from special steel. Bar is extra heavy, fitted with hickory hand grip and entire wrench is practically indestructible. Jaws are case hardened and all metal parts finished in black.

Machinist's Steel Handle Wrench. A semi-finished wrench, strictly first quality and designed for hard service. Head and jaws are drop forged in one piece. Jaws are hardened and handle is of steel. Equal to the best wrenches in every way except finish.

The Railroad Special Wrench. An exceedingly strong, exceptionally well made tool, intended for heavy duty. Very similar to the Machinist's Knife Handle Wrench, except that it has a steel handle. Warranted against defect in material or workmanship.

Regular or Agricultural

This wrench is similar in construction and finish to the Machinist's Knife Handle Wrench described and illustrated above, except that it has a lighter bar, and has a regular, instead of a knife handle. Fitted with easy acting screw.

Combination

This wrench combines all the desirable features of both pipe and nut wrenches, adapting it to a wide range of work. Head and bar forged in one piece from best crucible steel. Provided with knife handle and seasoned wood grip.

Adjustable Wrenches

Crescent Pattern—Adjustable Wrench

This wrench follows in outline the solid 22½° engineer's wrench, the most serviceable of all solid wrenches. The 10-inch size takes the place of 9 sizes of solid wrenches. It is quickly adjustable to all nuts within its range. Made of drop forged steel except the movable jaw, which is made of a special alloy having four times the strength of ordinary steel.

12	2½	3½	18.00	1.80					

Speed Nut Auto Wrench

The quickest nut wrench made. Gives a lightning grip on any nut from ¼ to ¾ inch. It is unnecessary to turn any thumb-screw or make any adjustments. The harder the pull the tighter it grips. Will not wear the corners of the nuts. Only three parts and will not get out of order. Made of drop forged steel.

Price each.....\$1.70

Coe's Key Model Wrench

This wrench is made from the best forged steel and is intended for extra heavy service and for use on large work. Each size has a wide range, because of the key feature. The movable jaw can be moved up and down the bar, and wedged by the key as shown in illustration. This does not, however, interfere with the adjustment of the thumb-screw.

The 28-inch size will take a 3-inch; the 36-inch, a 4-inch, and the 48-inch, a 6-inch regular pipe union.

Length, Inches	Opens, Inches	Weight, Pounds	Price, Each
28	5½	17	\$10.50
36	6½	27	22.00
48	9½	62	58.00

Ideal Chain Wrench

The Ideal chain wrench has a double set of jaws, the outer set for pipe, the inner set for fittings, valves, etc. The V shaped jaws take hold of the beaded fitting or irregular shaped article at two points, one jaw on each side, giving a positive hold.

The automatic chain lock, an exclusive feature, obviates the necessity of lifting or inserting the chain by hand. The operator, by simply pulling the chain, causes it to drop into the lock with all slack taken up. The chain while locked, is held with absolute security, even if held in an inverted position.

The jaws are drop forged tool steel. The handle is made of spring steel, combining strength and efficiency with lightness.

Gripwell Chain Pipe Wrenches

These chain wrenches are drop forged from crucible steel. Jaws are interchangeable and so fitted to the handle that very little strain falls on the bolt, which merely holds the jaws in place. Chain swings from an eye forged in end of handle, making it reversible. Jaws are perfectly tempered and can be sharpened by filing only. Chains are hand-made from special steel.

Williams' "Agrippa" Drop Forged Chain Pipe and Fittings Wrench

With Single Jaw and Flat Link Chain only, for Turning or Holding both Pipe and Fittings from $\frac{1}{8}$ to 12 Inches Diameter

As used on Nipple

As used on Tee

An unsurpassed tool for cramped and irregular fittings which cannot be effectively handled with broader wrenches. It is particularly serviceable on flanges, short nipples and R. & L. hand fittings. The Wrench is made entirely from wrought steel; the single jaw is tempered for file-sharpening; all parts are interchangeable and replacements are carried in stock.

The Chains are hand made from steel manufactured expressly for them. To insure proper service each is "proof-tested" in a standard tension machine up to two-thirds of its "breaking strain" as listed in table. Each Chain so tested is stamped O on the drop-forged swinging link, thus absolutely establishing the safety-factor and reliability of every Wrench.

Vulcan "Bijaw"

With Double-Ended Reversible Jaws for Pipe, Pipe Fittings, Bolts, Bars, Shafts, etc., from $\frac{1}{8}$ -inch to 12 inches

The "Vulcan Bijaw" Pipe Wrench is practically a four-in-one tool. All parts made of Drop Forged steel, are interchangeable and absolutely guaranteed. Flat, hand-made chain is of great strength and the jaws are tempered for file sharpening. The utility of tools is doubled and abundant strength and safety are preserved without encumbering design or adding extra weight.

Central Swing of Chain—Tool is always "right side up."

Guaranteed Strength—Will exceed printed tests.

Reversible Jaws—Insure double life and an "always ready" tool. You get service of two or four tools at the cost of one.

No Spreading of Jaws When at Work—Jaws are fastened with two bolts and nuts, which, if injured, may be easily replaced. Nuts are readily released when reversing jaws.

H.Channon Company Chicago

Stillson Pipe Wrench

The Stillson pipe wrench is so well known, that a detailed description is unnecessary. Made with wooden handle in the 6 to 14-inch sizes, steel handle in the 8 to 48-inch sizes. The 8 and 10 inch, steel handle wrenches have enlarged grip, same as the wooden handle, and are also made with narrow jaws for automobile use. Prices same as regular wrenches.

Lgth., Ins.	Takes Pipe Up to	Price Each Complete	Jaw	Frame	Extra Steel Handle	Nut	Wood Handle Grip

48	1 to 5	20.00	7.50	2.20	10.50	1.50	

All sizes up to 24-inch, inclusive, are packed in wooden boxes of 1½ dozen each. 36 and 48-inch, packed in 1-6 dozen boxes.

Walco Adjustable Hex Wrench

The Walco adjustable hex wrench is the only monkey wrench made with jaws which grip on four sides of hexagonals. The jaws fit so nicely that they will not mar polished surfaces such as nickel plated fittings, etc. Plumbers and steam fitters will find it a perfect wrench for making up valves, bibbs, cocks and unions. Made from high grade tool steel with malleable iron frame.

No.	Size of Hexagon Across Flats	Length Open, Inches	Length Closed, Inches	Price Each
*0	1½ to 1	8¼	7½	\$ 1.75
1	1¼ to 1½	14	13	5.00
2	1½ to 2½	25	23	10.00

*This size especially adapted for automobiles, and has tire puller handle.

Parmelee Pipe Wrenches

Grips with equal pressure all around pipe and will not crush the weakest pipe. Will make or break the tightest joints without injury to the pipe, because it has no teeth, making it especially suitable for galvanized pipe. Will handle pipes closely spaced as in coil work. Has ratchet-like action. Successive grips can be taken without having to hold the wrench on the pipe.

Set No.	Length Handle, Ins.	Size of Pipe Handled, Inches	Price Complete	Extra Handle	Extra Girths
1	10	¾, 1, 1½, 2	\$ 5.00	\$2.25	\$0.75

4	25	2, 2½, 3	9.50	5.00	1.50
5	35	3½—4	13.00	7.50	2.50—3.00

Can furnish girths for rod or special tubing of any diameter from ¾-inch to 4½ inches for use with our regular handles.

Trimo Pipe Wrench

Drop forged from bar steel and interchangeable in all parts. Does not lock upon pipe but releases readily. Grips pipe firmly without lost motion; does not slip or crush pipe. Movable jaw and nut made with round top and bottom thread. Inserted jaw in handle can be replaced at small expense when worn, making wrench good as new. Made also with wooden handle in the 6 to 14-inch sizes.

Furnished, unless otherwise ordered, as noted under Stillson wrenches.

Perfect Handle Pipe Wrench

The Perfect handle pipe wrench is undoubtedly the strongest made. The bar is one solid piece of drop forged bar steel, reinforced and having uniform strength from end to end. The handle is symmetrical in design and therefore not clumsy to handle. The wood in the handle is waterproofed and solid.

Sterling Power Hack Saw Blades

The Sterling power hack saw blades are drawn to a temper that makes them tough enough for soft steel and hard enough for tool steel, a degree most desirable in a hack saw blade. A blade that is a few gauges too heavy is far better than one too light for it will not break so easily and is therefore more economical. The heavy gauge power blades are made especially for use in high speed machines. The length, width and number of teeth of blades herewith shown are adjustable for practically every requirement.

Rail Hack Saw Machine

Will cut any kind of steel rail, beam or girder; is easily operated and cuts clean and quickly. The blade is governed by a guide which together with the frame and the blade can be raised or lowered at will, according to the depth of the work.

There is a great saving in blades when used in a device of this kind, as the action of the stroke is positive, and there being no side motion of any kind, breakage is almost impossible. Jaws grip rail firmly and can be adjusted to any size. Can be disengaged to allow passage of car and re-engaged losing practically no time at all. Takes 14-inch hack-saw blade.

Price each.....\$100.00

Sterling Blades for Hand Rail Hack Saw Frames and Light Power Machines

We recommend these blades for cutting rails, I beams and channels. They have a special set to the teeth which permits of a straight and rapid cut.

Hack Saw Depth Gauge

Especially adapted for cutting the walls of flexible conduits for electrical wiring without cutting into or injuring the interior insulation. Made of No. 14 gauge heavy pressed steel. The blade is held in place by the lower set of thumb screws which have their points shaped as tenons and hold the blade firmly to the gauge. Adjustable for blades 1/2-inch or narrower. Length 7 1/2 inches. Weight per dozen, 2 pounds.

Price per dozen.....\$5.00
Price each......50

We have a frame and a power saw suitable for every shop.

H. Channon Company Chicago

Sterling Hack Saw Blades

Sterling Hack Saw Blades are manufactured from a specially analyzed, high quality steel, imported. The steel is a high tungsten alloy, and is rolled by a mill with a world wide reputation for the quality of their product.

The heat treatment of the blade is applied by the most up-to-date methods. The teeth are all milled (not punched), and are set so as to cut straight and give proper clearance. When the proper pitches and gauges are used, Sterling Hack Saw Blades will be found to be the most efficient and economical to use.

To secure the maximum results, care should be taken to use the proper blades for the different classes of work. (See list below.) The speed and application of pressure are also important features in securing the best results.

When using blades in a hand frame they should be operated at 40 to 50 strokes per minute on hard metals and from 50 to 60 strokes per minute on soft metals. Pressure should be applied gently on the forward stroke, so that the teeth will cut, and not slip over the metal, as slipping quickly ruins the teeth. On the return stroke, the pressure should be released.

For cutting machinery and other soft steel with power machines, a speed of 90 to 120 strokes per minute should be employed, using water or a cutting compound. A good lubricant can be made by dissolving a handful of common soap in a gallon of water. On annealed tool steel, 60 to 70 strokes per minute should be the maximum and no compound or water used.

IMPORTANT. In ordering, be sure to specify length, width, thickness and tooth wanted, otherwise blades most commonly used will be furnished.

Sterling Flexible Blades

We highly recommend the Sterling Flexible Double Hard Edge Blades for use among plumbers, steam fitters, electrical workers and for all outside structural work. These blades are unbreakable when used in a hand frame. Both the back and cutting edges of the blade are tempered, while the center is left soft and pliable. This allows sufficient flexibility and at the same time gives proper rigidity. This feature prevents in a large measure the gluing, sticking or binding of the blade in the cut, which is the fault with blades with all-soft backs.

Send us your specifications for large quantities of Hack Saw Blades.

Channon Extension Hack Saw Frame

This hack saw frame is easily and instantly adjustable for hack saw blades from 8 to 12 inches. It is well made throughout, being stiff and strong, nickel plated and full polished. Depth of cut $2\frac{1}{2}$ inches. Blades may be faced in four directions.

Price per dozen \$7.00
Price each \$7.00

Channon Extension Hack Saw Frame

With D Handle

This frame is exactly the same as the one described above, except in being provided with a D or saw handle, which will be appreciated by mechanics. It can be used with one hand far more easily than the regular handle, giving much greater leverage. Depth of cut, $3\frac{1}{2}$ inches.

Price each \$1.80

No. 6 Star Hack Saw Frame

Adjustable to hold blades from 6 to 12 inches, inclusive; will face blades in four directions. Highly polished and heavily nickel plated. Cocobolo handle. Depth of cut, $2\frac{3}{4}$ inches.

Price each \$2.40

No. 10 Star Hack Saw Frame

Made of tempered steel, nickel plated and polished. Handles are cocobolo, highly finished. Carries blades 6 to 12 inches long and is marked for different lengths. Depth of cut, $2\frac{3}{4}$ inches.

Price each \$2.40

Pistol Grip Hack Saw Frame

The handle affords a perfect fit for any size of hand. Handle is secured to frame by a steel rib extending nearly the full length of the handle, and shaped to make the tool correctly balanced. Extensible for blades from 8 to 12 inches, with scale for the different lengths. Blades may be faced in four directions. Depth of cut, $3\frac{1}{2}$ inches.

Price each \$2.85

No. 29 Magazine Star Hack Saw Frame

The back of this frame is rectangular tubing, affording lightness and strength and a receptacle for six hack saw blades closed with a hinged cap. Sliding clamp is instantly adjustable to different lengths of blades. Blades are strained by turning the handle and may be faced in four directions. Depth of cut, $3\frac{1}{2}$ inches. Holds blades 8 to 12 inches.

Price each \$5.30

Heavy Adjustable Hack Saw Frames

Adjustable for blades from 8 to 12 inches, inclusive. A heavy rigid frame made from $\frac{1}{4}$ to $\frac{3}{4}$ -inch stock. Blades can be faced in four directions. Depth of cut, $3\frac{1}{2}$ inches.

No. 69. Polished and nickel plated. Price each \$1.70
No. 69B. Black finish. Price each 1.40

No. 20 Steel Hack Saw Frames

Full polished and nickel plated. Not adjustable for different lengths of blades, each size frame holding one size blade. Blades can be faced in four directions. Depth of cut, $2\frac{1}{2}$ inches.

For blades, inches long 8 9 10 12
Price each \$0.70 \$0.80 \$0.90 \$1.00

Heavy Hack Saw Frames

Non-adjustable for different lengths of blades. Very heavy and rigid. Blade is strained by turning handle.

No. 14. For 12-inch blades only. Steel frame $\frac{1}{4}$ xl-inch, $5\frac{1}{4}$ -inch cut. Polished and nickel plated. Each \$1.90

No. 14B. Same, except black finish. Each 1.60

No. 68. Same as No. 14, except for 14-inch blades only.

Price each \$2.10

Rail Hack Saw

This saw is especially adapted for cutting off rails, large beams and other structural shapes.

Nos. 4, 5 and 6 have handle on each end.

Manual Training Benches

No. 142. Made of hard maple. Dimensions, 42 inches long, 22 inches wide, 32 inches high; top, 2 1/4 inches thick; drawer, 22x19 x6 inches, fitted with good drawer pulls. Bench is fitted with No. 70D Roller Nut Rapid Acting Vise, steel dog and bench stops. Top of bench shellaced; stand oiled.

Shipping weight, 130 pounds.

Price each.....\$14.65

No. 152. Same as No. 142, with top 52 inches long.

Price each.....\$15.65

No. 42. Same as No. 142, except without drawer.

Price each.....\$13.16

No. 52. Same as No. 152 without drawer.

Price each.....\$14.15

No. 1352. Made of hard maple; finished in white shellac; top is 52 inches long, 22 inches wide, 2 1/4 inches thick. Working top is 14 1/2 inches wide. Bench stands 32 inches high. Drawers, 18 1/2 x 17 x 5 inches; cupboard, 18 x 17 x 13 inches. Shipping weight, 175 pounds. Fitted with No. 19A Massey lightning grip vise.

Each.....\$24.30

Fitted with No. 70D Abernathy roller nut rapid action vise. Price each.....\$25.30

No. 552. Made of maple. Finished in white shellac; top is same as No. 1352; general drawer, 32x17x5 1/2 inches; individual drawers, 15 1/2 x 17 x 5 1/2 inches; bench stands 32 inches high. Shipping weight, 180 pounds. Fitted with No. 19-A Massey lightning grip vise.

Price each.....\$24.30

Fitted with No. 70D Abernathy roller nut rapid action vise. Price each.....\$25.30

No. 552X2. Same as No. 552, made double, 36 inches wide, for two students.

Price each, with No. 19A vises.....\$38.50

Price each, with No. 70D vises.....\$39.50

No. 042.

Made of hard maple, top 42 inches long, 20 inches wide, 1 3/4 inches thick; bench stands 32 inches high; working top, 13 inches wide. Shipping weight, 110 pounds. Fitted with two maple wood screw vises.

Price each.....\$9.90

Fitted with one maple wood screw vise on end and one No. 70D roller nut rapid acting vise on front.

Price each.....\$14.50

No. 1348.

Made of hard maple; top, 48 inches long, 22 inches wide, 1 3/4 inches thick; working top 13 1/2 inches wide; drawers, 18 x 16 x 5 inches; cupboard, 18 1/2 x 18 1/4 x

10 inches, 32 inches high; entire bench finished in white shellac. Shipping weight, 160 pounds. Fitted with two maple wood screw vises.

Price each.....\$17.00

Fitted with one maple wood screw vise on end and one No. 70D roller nut rapid acting vise on front.

Price each.....\$21.25

No. 048. Same top as No. 1348, with stand like No. 042. Fitted with two maple wood screw vises

Price each.....\$10.60

Fitted with one maple wood screw vise on end and one No. 70D roller nut rapid action vise on front.

Price each.....\$15.20

Shipping weight, 115 pounds.

No. 752.

Made of maple. Finished in white shellac; top is 52 inches long, 22 inches wide, 2 1/4 inches thick; general drawer is 32 x 17 x 5 1/2 inches; individual drawers, 17 x 15 1/4

x 5 1/4 inches; bench stands 32 inches high. Shipping weight, 200 pounds.

Fitted with No. 19A Massey lightning grip vise.

Price each.....\$27.35

Fitted with No. 70D Abernathy roller nut rapid acting vise.

Price each.....\$28.35

Technical School Bench

No. 760. Made of maple, finished in white shellac, top is 60 inches long, 22 inches wide, 2 1/4 inches thick; general drawer 36x18x5 inches; individual drawer 18x17 1/2x5 inches; bench stands 32 inches high. Shipping weight 200 pounds. Fitted with maple wood screw vise on end and No. 70 Abernathy roller nut vise on front.

Price each.....\$30.50

No. 760X2. For two students as shown in above illustration, with wood end vises and No. 70 front vises.

Price each.....\$44.60

Two Student Bench

No. 1360X2. Made of maple, finished in white shellac; top is 60 inches long, 36 inches wide, 2 inches thick; drawers 21 x 17 1/4 x 6 1/4 inches; cupboards 21 x 17 1/4 x 7 inches. Height 32 inches. Shipping weight 280 pounds. Fitted with maple wood screw end vises and No. 70 Abernathy roller nut rapid action vises.

Price each.....\$40.50

Fitted with No. 70 vise on front and No. 70D vise on end.

Price each.....\$49.70

Cabinet Maker's Bench

Our No. 078 bench is substantially built throughout. It has a 2 3/8-inch thick, glued and finished top, back of which is a well 10 inches wide, used as a recess for tools; the legs are solid maple and measure 2 x 3 inches.

Equipped with our No. 19 Bench Screws, 2 1/2 inches in diameter; these screws have saw cut threads.

No. 078. 61 1/2 feet long, 24 inches wide; 16-inch maple top, 34 inches high; weight, 180 pounds.

Price each.....\$15.60

Two Student Bench

No. 048X2. Made of maple; finished in white shellac; height 32 inches; top is 48 inches long, 36 inches wide, 1 3/4 inches thick.

Shipping weight 200 pounds. Fitted with 4 maple wood screw vises.

Price each.....\$16.00

Fitted with maple wood screw vises on ends and No. 70 Abernathy vises on front.

Price each.....\$24.30

For 2 drawers, one on each side, 22 x 10 1/2 x 6 inches, add to each bench.....\$3.10

Special Benches and Domestic Science Tables

We are prepared to furnish any type of bench desired. If you do not see what you want on these pages write to us giving description of type of bench desired, or send drawing or sketch. We can make any bench you want. We can also furnish domestic science tables of any style. Write for prices.

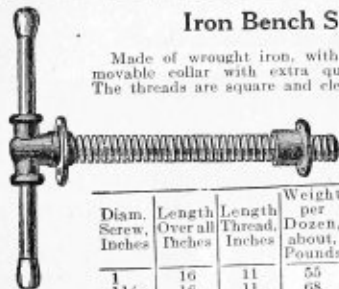

Channon Clincher Tops Excel!

We make all of our benches from well seasoned kiln dried hard maple. All glued joints are made with dovetailed tongue and groove forming the Channon clincher joint, as shown by accompanying illustration. These joints can not pull apart, nor is it possible to force one of these glued joints apart. It is needless to say that Channon clincher joined tops make the best benches. Send us your orders.

Iron Bench Screws

Made of wrought iron, with double thread and movable collar with extra quality wood handle. The threads are square and clean cut.

Saws

Sterling Brand

Sterling brand saws are made exclusively for us from special hand saw steel. They are hand smithed, oil tempered and intended for skilled mechanics' use, for contractors, etc., who require reliable saws for hard and constant service. The blades are taper ground, thinner on the back than on the cutting edge, which reduces friction when sawing and prevents saw binding. Blades are highly polished and have full skew back. Handles are made of beechwood, polished, secured to blade with brass screws. Where a first quality saw is wanted, we recommend and warrant our Sterling brand.

This saw has the same type of handle as the No. 53 Perfection, described in opposite column.

Atkins No. 53 Perfection

This illustration shows how the Perfection handle enables the power to be applied directly to the cutting edge.

The user has full control of the blade from point to heel. A saw fitted with this style of handle will run easier than with the old style straight across or square handle.

This saw has all the latest improvements it is possible to put into a hand saw. Blade is made of silver steel, with skew back. It is ground tapered; that is, the cutting edge is left an even thickness from point to heel, and ground to a true taper from tooth edge to back four gauges. This style of grinding is appreciated by mechanics. The saw will run in green or wet lumber with less set than a saw ground the ordinary way. The cutting edge, being of an even thickness, is very rigid and prevents kinking or bucking.

Handy or Flooring Saw

Made from silver steel, taper ground, 18 inches long, 8 or 10 points to the inch, 5 inches wide at the butt and 5 1/2 inches wide in the center, tapered to a point. Toothed on the back at point. Handle is applewood and fastened with three screws. This saw can be used for sawing through floors and into flat surfaces without boring or using a keyhole saw or chisel. Made in one size only.

Price per dozen	\$23.00
Price each	2.30

Nests of Saws

No. 3 with Metal Cutting Blade

The handle is of applewood, carved and fitted with a lever nut for tightening blade. The 18-inch blade is for cutting metal, has a filing temper and is made from hack saw steel. Temper is drawn so that it may be filed. Will cut nails, spikes, bolts, lag screws or any untempered metal.

Set consists of metal cutting blade, 12-inch keyhole and 14-inch compass blade. Very serviceable for plumbers' and steamfitters' use.

Price of No. 3 nest of saws, complete.....\$2.00

No. 1

The No. 1 nest of saws has a beech handle, 18-inch blade with graduated teeth for both ripping and cross-cutting, 12-inch keyhole and 14-inch compass saw blade. For wood cutting only.

Price of No. 1 nest of saws, complete.....\$1.25

Interchangeable Compass Saw No. 10

This saw has beech handle of an improved pattern with nut for tightening blade. The grip being dropped below line of cut, allows the operator to reverse blade and saw without handle being in line of cut. Is very useful for sawing close to ceilings or in narrow places.

No. 4 Compass Saw

A low-priced compass saw made to meet the demand for an inexpensive tool. Beech handle, varnished edge.

Made in 10, 12, 14 and 16-inch lengths.
Price, per dozen.....\$3.00
Price, each......30

Metal Cutting Hand Saws

Blade is of highest grade silver steel and will cut all ordinary metal with ease. The 18-inch size is 1 1/2 inches wide at point and 4 1/2 inches at butt. Is 18 gauge on toothed edge, 20 gauge on back, gradually tapering to 23 gauge at point. Teeth are milled straight across, being specially tempered for straight filing. The handle, which is adjustable, is made of applewood, carved and polished and fastened to plate by nickel plated lever and bolt and a nickel plated screw.

Reversible

Made of thoroughly seasoned selected stock. Extra heavy cast steel clasp and washer. Malleable iron bolt, with lock rivet feature, preventing rivet from being detached.

Price per dozen pairs.....\$3.00

Price per pair......30

Two Man Cross Cut Saws

Silver Steel Perfection

This saw is made from a special steel which takes a very high temper and will hold its cutting edge longer than any other saw made. It is ground 14-gauge on tooth edge and 19-gauge in the center on back and 16-gauge on ends of back. In fitting, it is only necessary to set the tooth to clear tooth at gullet. It will run in green or dry lumber with less set and greater ease than any other saw. It has four sets of cutting teeth set between a set of swaged shaped rakers and is perforated. The perforations strengthen the tooth and when teeth have been filed down to the perforations it is only necessary to file through them to regum the saw. The Perfection is especially adapted for sawing hardwood and frozen timber.

Length, feet.....	4½	5	5½	6
Price each.....	\$3.60	\$4.10	\$4.60	\$5.60

Tuttle or Champion Tooth

Made from high grade crucible steel, ground 14x16 and 14x18 gauge. This saw has two sets of cutting teeth between a set of rakers, and is a good medium-price tool.

Common or Tenon Tooth

When ordering specify style of tooth required.

Circular Saws

Solid tooth. Patent ground and tempered. Extra quality and unequalled workmanship. We carry in stock for immediate shipment solid tooth circular saws from 8 to 36 inches in diameter of standard gauge and tooth space, both rip and cut off. The standard number of teeth in both rip and cut off saws is given in list below. Saws varying from standard are special and made to order only.

When ordering, always state whether rip or cut off is required, diameter, size of mandrel hole and whether right or left hand. When ordering saws other than standard we require in addition to the above, the following information: Gauge of saw at center and rim, number of teeth, style or pattern of teeth, diameter of pin holes and distance center to center of pin holes, R. P. M. of saw while in cut, kind of timber sawed, whether spring or swage set, H. P. available.

Gasoline Band Saw Brazing Outfit

The holder for clamping saws may be placed in a vise or screwed to a bench. The brazing torch is exactly suited for brazing band saws, as the flame is a small concentrated pointed flame of intense heat, which makes the braze in a few seconds. The brazing mixture is specially prepared for band saw work and will be found of superior quality. Saws up to $1\frac{1}{4}$ inches are easily and quickly brazed in a permanent manner.

No. 92
Band Saw
Clamp

Outfit consists of:

- 1-No. 93 Double jet torch.
- 1-No. 92 Band saw clamp.
- 1-Brazing spoon.
- 1-lb. brazing compound.

Packed one complete outfit in a box; net weight 10 lbs. Price, complete outfit, with full instructions... **\$20.50**

No. 93. Torch.

Silver Solder

This solder has proven to be the best adapted for brazing tempered steel.

Put up in tin boxes of 1 oz. each $\frac{3}{4}$ inch wide x .003 thick, per oz. **\$1.80**

Steel
Mitre Box

This mitre box has a steel truss frame, making it extremely rigid and practically indestructible. Special improvements include automatic dentents for holding the saw elevated, allowing the placing of work with both hands. The lever carrying the saw swings from 45 degrees to 90 degrees either right or left and locks automatically. Capacity of all sizes: $10\frac{1}{2}$ inches at right angles and $7\frac{1}{4}$ inches at mitre.

Excelsior Saw Tools

To successfully fit one and two man saws, the use of a set of Excelsior saw tools is an absolute necessity. Cross cut saws fitted with them will cut fast with but little effort. The set consists of a combined jointer, raker tooth gauge and side file, also a set block and set gauge. Packed one set complete in a pasteboard box with full directions for use.

Price of set, complete \$1.00

The "A A A" Hand Saw Clamp

May be used for either jointing, setting or filing, and the saw, being seated close to its work, does not quiver and needs no wooden prop. Can be attached to any square edge and it is ready for immediate use. Clamp weighs a little over a pound and occupies about as much room as a chisel, so that it may be conveniently carried in a kit. Made of wrought steel.

Price each, japanned \$1.35

Price each, nicked but not polished 1.80

No. 1AA Noiseless Saw Vise

In this vise the jaws are opened and closed by simply pushing a lever forward and backward. Jaws have rubber cushions to prevent the disagreeable noise usually attendant when filing saws. Has malleable iron screw clamp for attaching to bench. Width of jaw 11 inches.

Price each \$1.60

Stanley Doweling Jig

For boring dowel holes in the edge, end or surface of work with ease and accuracy. Will take material up to three inches thick. Is also an excellent bit guide for mortising. Five steel guides 1 1/4 inches long furnished with each jig.

No. 59. Nickel plated. Price each \$3.50

Stanley Scraper Plane

No. 12

Rosewood handles with double grip across center of tool, giving it a good balance. The blades are adjustable endwise or for an angle and are firmly locked in any position.

It can be used as a toothing plane and does excellent work in scraping off old paint or glue, also in roughing off the surface of wood before veneering.

Tooth cutting cutters if desired, 22, 28 or 32 teeth to the inch, 35 cents each.

No. 12 scraper, 6 1/4 inches long, 3-inch blade. Japanned iron face. Weight, 3 3/4 pounds.

Stanley's "Bailey" Adjustable Iron Planes

No. 3

No. 5

No. 6

The highest type of planes manufactured. They have the most improved form of adjustment, enabling the user to accurately adjust the cutter either side of plane.

Generally known as bench planes and divided into four classes: Smooth, Jack, Fore and Jointer.

Smooth: For finishing or smoothing rough surfaces. Jack: For truing up the edges of a board in the rough. Fore: A short jointer plane. Jointer: For finishing large surfaces and truing up edges of boards that they may be fitted closely together.

In the Bailey adjustable planes the cutter is thin and of uniform thickness. Its advantages are ease in grinding, less grinding required and is adjustable endwise by means of a wheel at back of frog. Planes are furnished with either flat or corrugated bottoms. The number with the letter C designates corrugated bottom.

Number Flat Bottom	Number Corrugated Bottom	Price Each	Length, Inches	Width of Cutter, Inches	Class	Weight Each, Pounds

Stanley Adjustable Block Planes

No. 9 1/2

No. 18

These planes have the adjustable throat feature which permits of cutting a heavy or light chip. Cutter can also be adjusted for side cutting.

In No. 18 the knuckle joint in cap makes it also a lever, and placing cap in position clamps the cutter securely to its seat.

No. 9 1/2. 6 inches long, 1 3/8-inch cutter, Japan trimmings. Weight 1 1/2 pounds.

Price each...\$2.10

No. 18. 6 inches long, 1 3/8-inch cutter, nickel trimmings. Knuckle joint. Weight 1 1/2 pounds.

Price each...\$2.60

Stanley Adjustable Block Planes

No. 203. A new plane designed especially for manual training use. Bottoms and sides are ground and fitted with the "Handy" Grip feature, which gives a firm grip for the hand of the user. Length, 5 1/2 inches. Cutter, 1 3/8-inch. Screw adjustment. Weight, 1 1/2 pounds.

Price each...\$1.40

No. 220. The cutter in this plane is high grade steel, fastened by a lever and cam, and adjustable endwise by a screw adjustment operated from the rear of the plane. Length, 7 1/2 inches. Cutter, 1 3/8-inch. Weight, 1 1/2 pounds.

Price each...\$1.45

Stanley
Core Box
Plane

For making circular core boxes, as only a right angle may be inscribed in a half circle. The sides of the plane are at right angles, consequently the point of the plane will always cut on the circumference of the circle when the sides rest on the edges of the cut.

No. 56 is especially adapted to small core boxes, working semi-circles from $\frac{3}{8}$ -inch to 2 inches in diameter. The handle is made of rosewood.

No. 57 is adapted for larger core boxes and is furnished with one pair of extra sides, or "additional sections," as they are called.

Without sections plane works semi-circles from 1 to $2\frac{1}{2}$ inches in diameter. With one pair sections, up to 5 inches in diameter. Additional sections can be supplied, each pair adding $2\frac{1}{2}$ inches to the diameter of the circle.

No. 56. Price each.....\$4.65

No. 57. Price each.....8.25

Stanley Duplex, Fillister and Rabbet Plane

Has two seats for the cutter, one for regular work and the other where a bull-nose is required. Has spur and removable depth gauge. The adjustable fence can be used on either side and slides under the bottom, regulating the width of cut. To work as a rabbet plane, remove fence and arms.

No. 78. $8\frac{1}{2}$ inches long, $1\frac{1}{2}$ -inch cutter. Japaned. Weight, 3 pounds. Price each.....\$3.30

Stanley
Low Angle
Block Plane

Designed to meet the demand for Block Planes having the cutters lying at an angle lower than 20 degrees. In the low angle planes the cutter rests on its seat at an angle of only 12 degrees. This permits greater ease in working across the grain on hardwood. They have adjustable throats, which allow the opening or closing of the mouth, as coarse or fine work may require. All cutters are made of high grade steel and are adjustable endwise by means of the adjusting wheel at the rear of plane.

No. 65. 7 inches long, $1\frac{1}{4}$ -inch cutter. Nickel trimmings. Weight $1\frac{3}{8}$ pounds. Price each.....\$2.90

No. 60. 6 inches long, $1\frac{1}{8}$ -inch cutter. Nickel trimmings. Weight $1\frac{1}{4}$ pounds. Price each.....\$2.45

Stanley Combination Plane

A seven in one tool, both compact and practical.
1. Beading and center beading plane. 2. Plow. 3. Dado. 4. Rabbet and Fillister. 5. Match Plane. 6. Sash Plane. 7. Slitting Plane.

The plane has two principal parts, a main stock and a sliding section which together form a bottom giving bearing for different widths of cutters.

The following cutters are furnished with each plane: Seven beading tools, $\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$ and $\frac{1}{2}$ -inch; ten plow and dado bits, $\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{5}{8}$ and $\frac{3}{4}$ -inch; a tonguing tool, a sash tool and a slitting cutter.

Each plane has an adjustable fence, a depth gauge, spurs for use across the grain, etc., a cam leveling or steadying rest, and may be used either right or left hand.

No. 45. Nickel plated. With 21 cutters. Weight $9\frac{1}{2}$ lbs. Price each.....\$5.90

Take-Down Steel Squares

This square is easily set up and taken down and will always remain accurate. The main feature about it is that although intended to be operated by a key, a screw driver or nail will answer the purpose just as effectively. All edges hardened, insuring accuracy and prolonging the life of the square.

No. 500R. Framing Square, body 24x2 inches, tongue 16x1½ inches. Graduated ¼, ⅓ and ⅔, 1/12 and 1/10 inches. Regular roof framing rule, brace measure, octagon and 1/100 scale. Oxidized copper finish with white figures.

Price each, with rust proof case.....\$5.30

Steel Squares

Cut solid from the metal plates without welding, and then tempered and trued up to obtain absolute angle accuracy. All edges hardened, insuring accuracy and prolonging the life of the square. Markings are deep cut and accurate.

No. 100. Body 24x2 inches, tongue 16x1½ inches. Graduated ¼, ⅓, ⅔, 1/12 and 1/10-inch, 100th scale and Essex, octagon and brace board measures. Polished, satin finish.

Price each.....\$2.10

No. 1. Same as No. 100, but graduated ¼, ⅓, 1/12, ⅓-inch and 100th scale. Polished, satin finish.

Price each.....\$2.00

No. 3B. Body 24x2 inches, tongue 16x1½ inches. Graduated ¼, ⅓, 1/12, ⅓ inches. Board and brace measure, octagon scale. Oxidized copper on steel markings in white enamel. Our best steel square.

Price each.....\$1.70

No. 14. Same as No. 3, except graduated ¼, ⅓, ⅔ and 1 inch, and polished steel, satin finish.

Price each.....\$1.50

Weight of Nos. 100, 1, 3 and 14, about 2½ pounds.

No. 12. Body 12x1½ inches, tongue 8x1 inches. Graduated ¼, ⅓, ⅔, 1/12-inch. Polished, satin finish.

Price each.....\$1.25

No. 20 Rosewood Handle Try Square

Roller steel blade, blued finish; figures and lines stamped. Blades inserted in handle and secured with three iron rivets and brass bush burrs. Graduated in inches and eighths. Polished rosewood handle with "Handy" groove. Brass inside edge plate attached with blued steel screws. Square inside and out, and edges of blade are machined to insure accuracy.

Length blade, inches.....	4½	6	7½	9	12
Width blade, inches.....	1½	1½	1½	1½	1½
Length handle, inches.....	3½	4½	5½	6	7
Weight each, ounces.....	4	5½	8	9½	13½
Price each.....	\$0.50	\$0.65	\$0.70	\$0.90	\$1.20

No. 17 Mitre Try Square

Can be used equally well as mitre or try square. Used extensively in manual training schools. Graduated in 8th inches. Handles and blade are nickel plated. Size of blade 7½x1½ inches. Handle is 5 inches long. Weight 8 ounces.

Price each.....\$1.10

No. 25 Rosewood Handle Bevel

So constructed that bevel blade can be firmly secured by moving the lever with the thumb of the hand which grasps the handle, leaving free the other hand of the workman. Blade is given a handsome blued finish and the edges are machined, insuring accuracy.

Blade, inches.....	6	8	10	12
Length handle, ins.....	4½	5½	7½	8½
Weight each, ounces.....	3½	4	5	8
Price each.....	\$0.55	\$0.60	\$0.65	\$0.70

No. 62 Marking Gauge

Made of selected beechwood, highly polished. Graduated in 16ths for 6 inches from point. Weight about 4½ ounces.

Price each.....\$0.25

No. 65 Marking Gauge

Made of selected boxwood with brass screw, square head and brass face plates. Approximate weight, 5 ounces.

Price each.....\$0.65

No. 72 Mortise Gauge

Double bar. This gauge has two independent bars working in the same head. One pin is affixed to each bar. One side of mortise is marked and gauge turned over for the other mark. Weight about 5 ounces.

Price each.....\$0.45

No. 91 Mortise Gauge

Made of metal throughout. Two bars 6½ inches long graduated in 16ths for 5 inches. Approximate weight, 8 ounces.

Price each.....\$1.10

H. Channon Company Chicago

Stanley Iron Spoke Shaves

Have cutters made from high grade steel, well tempered and sharpened ready for use. Handles are japanned and a hole enables user to hang up tool when not in use.

No. 53 Adjustable Mouth

No. 53

By means of a thumb screw, mouth can be opened or closed as coarse or fine work may require. Raised handle. Length, 10 inches. Cutter, 2½ inches.

Price each.....\$0.65

No. 55 Hollow Face

No. 55

This spoke shave has a cutter with a hollow face for all kinds of round work. Raised handle. Length, 10 inches. Cutter, 2½ inches.

Price each.....\$0.45

No. 151 Adjustable

This improved spoke shave has a lever cap fastening the cutter in such a manner as to bring an even pressure on the cutting edge. The cutter is adjustable endwise and sideways by means of the adjusting screws. Raised handle. Length, 10 inches. Cutter, 2½ inches.

Price each.....\$0.75

Stanley Plumbs and Levels

No. 6. Non-adjustable. Cherry, mahogany stained; one-piece stock; brass top plate; side view. Assorted lengths, 24 to 30 inches. Weight, 3 pounds.

Price each.....\$1.50

No. 3. Adjustable. Cherry, mahogany stained; brass top plate and lips. Side view. Assorted lengths, 24 to 30 inches. Well made and nicely finished. Weight, 3½ pounds.

Price each.....\$2.70

No. 5. Adjustable. Made of selected hardwood, 3-ply, mahogany stained. Brass tips, lips and top plates. Assorted lengths, 24 to 30 inches. Weight, 3½ pounds.

Price each.....\$3.30

Duplex Adjustable Plumbs and Levels

These levels can be read conveniently, even if held at angle, length above the head. Have three glasses; a level glass set in the top, a plumb glass and a second level glass set in the side. These latter two glasses are set close to one surface of the stock so that the angle of vision of the bubble is greatly increased. All three glasses are adjustable. Made from 1½x3½-inch selected stock in assorted lengths, 24 to 30 inches.

No. 30. Hardwood, mahogany stained. Brass tips. Weight about 3½ pounds.

Price each.....\$2.30

No. 45 Plumb, Rule and Level

No. 45. Adjustable level glass, two adjustable plumb and two openings for use of plumb bob and line. Made of soft wood to obtain lightness. Stock 1½x1½x18 inches. Brass tips. Weight about 6 pounds.

Price each.....\$1.50

No. 250 Mason's Plumb and Level

No. 250. Mason's plumb and level. Adjustable glasses. One hole for use of plumb bob and line. Made of soft wood. Size stock, 3½x1x18 inches.

Price each.....\$2.30

Machinist's Iron Level

No. 39½

No. 39½. For mechanics' tool kits. Fitted with proved glasses which are set in solid plaster. Cast iron frame with set top, nickel plated. Length, 6 inches. Weight about ½ pound.

Price each.....\$1.00

Iron Levels

No. 435. Double plumb except the 4-inch, which has level glass only. Base is grooved for cylindrical work, groove being exactly parallel with edge of base. Adjustable glass in level. 5 cents net extra any size.

Length, inches.....	6	9	12	18	24
Price each.....	\$1.50	\$1.65	\$1.75	\$2.00	\$2.30

L. S. Starrett Levels

Listed elsewhere in this catalog are other mechanics' levels, such as iron bench levels, shafting levels, plumbers' levels, cross test levels, etc. See index.

Stanley Proved Level Glasses

PROVED GLASS

Made of extra heavy glass tubing.

Length, inches.....	2	2½	3	3½	4
Price each.....	\$0.12	\$0.14	\$0.16	\$0.20	\$0.30

Edge Tools

Our edge tools are forged from highest grade crucible tool steel, tempered by the most approved methods. Full mirror polished. All socket tools are invisibly welded to sockets of seamless drawn steel tubing, which is much superior to forging the blades with the sockets, machined from a bar or lap welded.

Socket Firmer Chisels

Bevel edges and leather tipped handles. Blades are 6 1/4 inches from cutting bevel to shoulder. Both blades and sockets are highly polished and edge is carefully sharpened.

Socket Butt Chisels

The same quality throughout as the Firmer chisels described above. Preferred by many mechanics where there is no necessity for the longer blades found on Firmer chisels. Blade measures 1/4 inches from edge to shoulder.

Socket Firmer or Butt Chisels

Chisels in Sets

These sets are made up of different sizes of Firmer and butt chisels described above.

The boxes are of finished hardwood and each chisel is held firmly in place by a spring in connection with the pocket ramed in the box.

Socket Firmer Chisels

With Beveled Edges and Leather Tipped Handles

No. 2306F. Set of 6 Socket Firmer chisels, one each 1 1/2, 1 3/4, 2 and 2 1/2-inch. Weight, about 4 pounds. Price per set.....	\$12.90
No. 2306FL. Same, except in canvas roll, flannel lined. Weight 3 pounds. Price per set.....	\$13.50
No. 2309F. Set of 9 Socket Firmer chisels, one each 1 1/2, 1 3/4, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2 and 5-inch. Weight about 6 pounds. Price per set.....	\$16.20
No. 23012F. Set of 12 Socket Firmer chisels, one each 1 1/2, 1 3/4, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, 5, 5 1/2, 6 and 7-inch. Weight 7 1/2 pounds. Price per set.....	\$22.35
No. 23012FL. Same as No. 23012F, except in canvas roll. Weight 5 1/2 pounds. Price per set.....	\$25.00

Socket Butt Chisels

No. 2005B. Set of 5 Socket Butt chisels, one each 1, 1 1/2, 1 3/4 and 2-inch. Weight about 4 pounds. Price per set.....	\$12.00
No. 2006B. Set of 6 Socket Butt chisels, one each 1 1/2, 1 3/4, 2, 2 1/2, 3 and 4-inch. Weight about 4 1/2 pounds. Price per set.....	\$12.70
No. 2006BL. Same as No. 2006B, except in canvas roll. Price per set.....	\$13.25
No. 2009B. Set of 9 Socket Butt chisels, one each 1 1/2, 1 3/4, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2 and 5-inch. Weight about 6 1/2 pounds. Price per set.....	\$18.00

Socket Framing Chisels

With plain back and handle fitted with polished iron ring. Blade measures 8 inches from cutting edge to shoulder. All metal parts highly polished. First quality throughout.

Size, inches.....	1 1/2	1 3/4	2	2 1/2	3
Price per dozen.....	\$10.50	\$11.50	\$13.00	\$14.00	\$15.00

Sloyd Knife

No. 2. Swedish Sloyd Knife with blade 2 1/4 inches long, 1/2 inch wide.	
Price each.....	\$0.50

H. Channon Company Chicago

Perfect Handle Draw Knife

This tool is drop forged from solid piece of crucible steel. The "perfect handle" will never pull off. Every tool warranted.

Size, inches	8	10	12
Price per dozen	\$16.00	\$18.00	\$20.00
Price each	1.60	1.80	2.00

Razor Blade Draw Knife

A carefully worked out design which combines stiffness, lightness and form for easy sharpening. This is secured by a heavy section, or rib, backing or supporting the cutting blade proper which is formed to allow a full cutting bevel. Blade is 1 1/2 inches wide. Cutting edge is high grade tool steel welded to mild steel back. Hardwood handle. Nickel plated ferrules.

Length, inches	8	9	10	12
Price per dozen	\$13.50	\$14.40	\$15.60	\$18.00
Price each	1.35	1.40	1.55	1.80

Folding Handle Draw Knife

Same as above, but with folding handles.

Size, inches	8	9	10
Price per dozen	\$18.00	\$19.50	\$21.00
Price each	1.80	1.95	2.10

Heavy Stripping Knife

Used extensively for stripping telegraph poles. Blade is 1 1/2 inches wide. Handles are formed with an enlargement at the end to give a better grip. Steel ferrules.

Size, inches	12	14	16
Price per dozen	\$21.60	\$25.20	\$28.80
Price each	2.15	2.50	2.85

High grade steel, ground and polished.

No. 182. Size, inches	4	5	6
Price per dozen	\$2.95	\$3.10	\$3.24
Price each	.30	.30	.31

Plastering Trowels

Made of good quality steel, ground and tempered. Well finished.

No. 191. Size, inches	10	10 1/4	11	11 1/4
Price per dozen	\$6.50	\$7.00	\$7.50	\$8.00
Price each	.65	.70	.75	.80

Tool Holders

The illustration represents the general appearance of the Tool Holders listed below. The handles are made of cocobola, highly polished and of beautiful appearance. The ferrule and jaws are heavily nickel plated. The jaws will hold not only the tools as shown, but all other things from a fine awl to a mill file. No other tool handle in the market will do this. It also answers the purpose of a hand vise.

No.	Price Each	Number of Tools	Length of Tools, Inches	Length of Handle, Inches	Weight per Dozen, Pounds
1m	\$2.00	20	1 1/2	6	5
*2w	2.00	11	2 3/4	8	7
*1w	3.00	11	4	7 1/2	11

*Has extra saw 8 inches long.

About Our Hammers

We sell but one grade of hammers, the best obtainable. They are carefully drop forged from crucible hammer steel tempered and hardened to a toughness that enables them to stand severe usage. Handled with selected white hickory handles shaped to give perfect balance. The heads are fastened with a wedge which prevents their flying off. Weights given are without handles.

Machinists' Hammers

Drop Forged Hardened Faces and Peins, Hickory Handles

Round Head Mortised Handles

Selected, solid, polished hardwood head with mortised second growth hickory handle.

Number	1	2	3
Size of head, inches	3x5	3½x5½	4x6
Length handle, inches	10½	13	13
Weight per dozen, pounds	15½	22	28½
Price per dozen	\$4.25	\$5.55	\$6.95
Price each	.40	.55	.70

Tinners' Mallets

Plain finish hickory head with hardwood mortised handle.

Head 5½ inches long by 2¼ or 2½ inches diameter. Handle 10½ inches long. Weight, 10½ pounds per dozen.
Price per dozen \$3.00
Price each .30

Rubber Mallets

These mallets are especially useful for striking heavy blows without bruising the metal, marring or disfiguring finely finished surfaces. Intended for the use of metal workers, but will be found very useful to woodworkers and other mechanics. Black rubber head.

No.	Price Each	Length of Head, Inches	Diameter at Center, Inches	Diameter at Ends, Inches
1	\$1.00	3¼	2½	2¼
2	1.30	3½	2¾	2½
3	1.50	4	2¾	2¾
4	1.80	4½	3½	2½

Fibre Mallets

Made of the very best fibre stock, wound in successive layers, with a film of waterproof cement between each. Warranted not to split, and will not jam, by long hard usage.
Mallets have a coating of good shellac.
Handles are of polished white hickory.

No.	Size	Weight Each, Ozs.	Price Dozen	Price Each

Wright's Expansive Bits With Patent Cutter

The cutter in this bit intermeshes with a cross-feed screw, firmly held in the plate or gib, which, when screwed down, cannot move, and therefore will not slip or creep. A positive accurate adjustment can always be made. Made in two sizes.

No. W1. With No. 1 and No. 2 cutters, bores holes from $\frac{1}{4}$ to $1\frac{1}{4}$ inches. Price each.....\$2.20
No. W2. With No. 3 and No. 4 cutters, bores holes from $\frac{1}{2}$ to 3 inches. Price each.....\$2.60

Extra Cutters

No. 1 bores holes $\frac{1}{4}$ to $1\frac{1}{4}$ inches. Price each.....\$0.30
No. 2 bores holes $\frac{1}{2}$ to $1\frac{1}{2}$ inches. Price each......35
No. 3 bores holes $\frac{1}{2}$ to $1\frac{3}{4}$ inches. Price each......50
No. 4 bores holes $1\frac{1}{4}$ to 3 inches. Price each......60
No. 5 bores holes 3 to 4 inches. Price each......90

A No. 5 cutter fits the large size bit and bores holes from 3 to 4 inches.

Wright's Patent Expansive Machine Bits

The improved and patented features of this bit and cutters combined have produced the strongest and easiest boring establishment.

The cutters cannot slip and are easily and accurately adjusted. The bit bores extremely smooth holes quickly in any kind of wood.

Stock bits have a special point and a $2\frac{1}{2} \times \frac{1}{4}$ -inch turned shank.

It is a practical and money saving addition to any wood working establishment.

No. 110. Large size, boring $\frac{1}{2}$ to 3 inches. Price each. \$2.60
No. 120. Small size, boring $\frac{1}{4}$ to $1\frac{1}{4}$ inches. Price each. 2.20

Wright's Combination Set

Set No. A12, boring from $\frac{1}{4}$ to $1\frac{1}{2}$ inches, contains 1 each 4, 5, 6, 7, 3 16th-inch Wright's Jennings auger bit, small Clark expansive bit, No. 1 Superior screw driver bit. Price.....\$4.00

Set No. A14, boring from $\frac{1}{4}$ to 3 inches, contains 1 each 4, 5, 6, 8, 10, 12 16th-inch Wright's Jennings auger bits, large Clark expansive bit, No. 2 Superior screw driver. Price.....\$4.75

Set No. C14, boring from $\frac{1}{4}$ to 3 inches, contains 1 each 4, 6, 8, 10, 12 16th-inch Wright's solid center auger bits, large Clark expansive bit, No. 2 Superior screw driver. Price.....\$4.75
All sets put up in canvas roll. When rolled up measures $11\frac{1}{2} \times 10$ inches.

Ship Augurs

For heavy work in rough timber or hard wood. Crucible tool steel with or without starting screw. Square rough shanks, fitting auger bit handles.

Twist varies in length, according to size. On the 4/16ths and 5/16ths, 8 inches; 6/16ths to 8/16ths, 10 inches; 9/16ths to 16/16ths, 12 inches, and 15 inches on larger sizes. Shanks are about 5 inches long.

Carried in stock, with and without starting screws, up to 3 inches in diameter.

Ship Augur Car Bits

For Boring Deep Holes

They differ from ship augurs only in the shank. They have standard twists (8 to 12 inches) and are about 17 inches long overall. Shank is suited to the ordinary bit brace. Furnished with starting screw. Carried in stock up to $1\frac{1}{2}$ inches diameter.

Millers Falls Boring Machine

This machine bores vertically, or at any angle from vertical within an arc of 50°. Depth of hole is regulated by a stop. Auger removed from hole by pushing a latch and continuing revolution of cranks in same direction as when boring. Bores to depth of 12 inches. Cranks are adjustable, regulating speed and power. Chuck holds straight shank drills up to 1/2 inch. Height, 25 inches. Weight boxed, 45 pounds. Price, without auger bits.....

\$14.00

Upright and Angular Boring Machines

These machines are well made and will bore true. The rack is strong, easily adjusted and will not slip.

No. 1. Upright wood frame; adjustable depth gauge; self withdrawing auger. Weight, about 35 pounds. Price, without augers.....

No. 2. Angular wood frame; otherwise the same as No. 1. Price, without augers.....

Henderson's Patent Joist Boring Machine

Bores holes in overhead joists from four to six times as fast as a brace and bit. Readily adjustable to varying heights of ceilings. No step ladder required. Collapsible to easy carrying length. Simply constructed, no complicated mechanisms to get out of order. Specially designed ball bearings. Universal bit holders. Adjustable 4 1/2 to 12 feet. Price.....

\$40.00

Henderson's Patent Universal Hand Boring Machine

Bores holes at any angle through studding, bridging, plates, floors and joists in old and new buildings. Working parts interchangeable with Henderson Patent Joist Boring Machine. Light running. Length in use, 28 inches, collapsed, 18 inches.

Collapsible—Can Be Carried in a Tool Bag.

Weights six pounds.

Price.....\$24.00

P. S. & W. Samson Ratchet Braces

A high grade tool for skilled mechanics. Head is lignum-vitae, steel clad and screw fastened; dust proof ball bearings in retaining cup. Box ring ratchet; Patent Alligator Pattern Jaws of Forged Steel, machined and hardened. Patent Ball Bearing Chuck, extra knurled and machine cut thread. Cocobolo center. All metal parts nickel plated and polished.

Universal Angular Bit Stock

To be used with a bit brace or a breast drill either as an extension or angular borer. Adjustable arc varies angle from 180° to 125°. Length at 180°—12 1/2 inches. Weight 2 1/2 lbs. With Master Chuck.

Price Each	\$2.75
------------	--------

No. 182 Drill Brace

High grade ball bearing ratchet brace with 10-inch sweep. Drilling attachment removed or affixed in a moment's time. Gear ratio about 3 to 1. Weight about 5 pounds.

Price each\$8.15

Corner Bit Brace

Ball-bearing head and adjustable, free-acting sweep and steadying handles. Chuck operated by inclosed gears, protected from dust and dirt. Gears case hardened and steel bushings in frame practically eliminate wear at bearings.

Handsomely finished throughout.

No. 503. 8-inch sweep, 17¼ inches long. Weight 4¾ pounds. Price each\$6.70

No. 502. 10-inch sweep, 17½ inches long. Weight 4¾ pounds. Price each\$7.25

Sill Borer or Joist Tool

For use in connection with a bit brace or breast drill in boring at right angles in cramped places. Indispensable for car builders, electricians, carpenters and other wood-workers. Main frame malleable iron; working parts, including gears, bushings, etc., hardened steel. Provided with ball bearings and take-ups for wear.

No. 51. Length, 16½ inches. Depth of head, 2¾ inches. Weight, about 3 pounds. Price each\$5.00

No. 54. Exactly the same as No. 51 except that the shank or handle is only 9 inches long, permitting it to be held more firmly. Price each\$5.00

Extension Bit Holder

Follows bits ½g-inch in diameter and larger into their bores. Bit inserted or released instantly when desired. Four strong steel jaws made in one piece grip firmly over shoulders of bit stock shanks. Polished and nickel plated.

Length, inches	12	15	18	21	24	30

Price each	\$2.25	\$2.30	\$2.35	\$2.40	\$2.50	\$2.65

Telescopic Extension Bit Holder

Outer sleeve telescoping over and engaging at half-inch intervals upon inner spindle. Combines lightness and strength. Length, collapsed, 16½ inches, extended. Weight per dozen, 13½ pounds.

No. 6. With chuck as on extension bit holder, described above. Price each\$4.00

Chain Drills

Automatic

Non-Automatic

No. 718. Automatic, self-regulating feed, or may be fed by hand. Yoke and nuts japanned; socket and bit stock nickeled. With master chuck for holding round shanks from ½ to ½-inch diameter, bit stock and No. 1 Morse taper shanks and 4 feet of chain. Weight, 4½ pounds. Price each\$5.15

No. 717. Same as No. 718, but without master chuck. Hole in socket is ½ inch in diameter. Weight, 3½ pounds. Price each\$3.45

No. 719. Same as No. 718, except has Star chuck holding round shank drills up to ½-inch. Weight, 4½ pounds. Price each\$6.60

No. 817. Non-automatic, without chuck. Diameter of hole in socket, ½ inch. Weight, 3 pounds. Price each\$3.00

No. 44 Yankee Automatic Drill

This tool has an adjustable tension for spring so its strength can be regulated to suit large or small drills, soft or hard woods, and greatly reduces risk of breaking of drill points. Has 8 drill points in plain sight when magazine is open. When drill is being inserted in chuck, open end of magazine is up, so it can be left open without drills falling out. Length, 11 1/4 inches. Provided with 8 drill points, 1/8 to 1/2-inch. Weight, 3/4 pound.

Price each.....\$3.00

Millers Falls Automatic Boring Tool
No. 45

Knurled cheek nut immediately back of chuck prevents latter from working loose. Chuck holds round shank drill bits from 0 to 1/4-inch. Handle is rare tropical wood. All metal parts polished and nickel-plated. Length, 11 1/4 inches. Weight about 3/4 pound.

Price each.....\$3.35

Goodell Automatic Drill No. 185

Drill point magazine is provided with a gauge showing exact size of drill point contained in each compartment. Equipped with 8 fluted drill points from 1/8 to 1/2-inch. Length, 10 inches. Weight, 1/2 pound.

Price each.....\$2.00

Goodell Automatic Drill No. 3

Patented magazine holds 8 drill points (1/8 to 1/2-inch), each in a separate numbered compartment, from which they can be removed through hole in rotating top. Accidental loss of drills practically impossible. Length, 10 inches.

Price each.....\$1.70

Reciprocating Drill No. 101

The mechanism of this drill is so arranged that, regardless of whether the traveling handle is moved backward or forward, chuck continues to revolve to right. A very useful tool for drilling holes in cramped quarters where no other drill can be conveniently used. Chuck holds drills from 0 to 1/4-inch. Length, 16 1/2 inches. Weight about 1 1/4 pounds each.

Price each.....\$2.30

Fluted Shank Drill Points

These drill points fit automatic drills. Made of the finest grade of steel.

Price per dozen, any size.....\$1.00

Price per set of 8......85

Yankee Hand Drills

With Right and Left and Continuous Ratchet Movement

No. 1545 Double Speed No. 1540 Single Speed

No. 1545. This drill has all the latest time-saving features. When the little slide between the gears is in the first notch it is plain drill; in second, a left-hand ratchet; in fourth, a double ratchet; when any movement of crank, forward or backward, causes the drill to cut continuously. When slide is in fifth notch gears are locked to open or close chuck. Provided also with two speeds for heavy and light work. Handle is detachable, so that interior can be used as a magazine for drill points. Ball-bearing throughout. All gears have cut teeth. Side handle has a screw driver bit to adjust screws. Chuck jaws are drop forged steel. Chuck holds round shanks 3/8-inch or less. Length, 15 inches. Weight, 4 1/4 pounds.

Price each.....\$9.50

No. 1540. Exactly like No. 1545, except that it has single speed only. Length, 16 1/2 inches. Weight, 3 3/4 pounds.

Price each.....\$8.00

No. 1445 3 Jaw Chuck No. 445 2 Jaw Chuck

No. 1445. Intended for mechanics who do not require so complete a tool as the No. 1545 or 1540. Strong and substantially built for hard work, with adjustable ball-bearings to take up all strain and wear. When slide is in notch 8 drill is set for slow speed; when at F for fast speed, and in center notch 1 spindle is locked so that chuck can be readily opened or closed. Three-jaw chuck holds all round shank drills up to 3/8-inch. Length, 15 inches. Weight, 3 1/2 pounds.

Price each.....\$6.00

No. 445. Same as No. 1445, described above, except furnished with two-jaw chuck, alligator pattern, for holding all drills round or square, up to 3/8-inch.

Price each.....\$6.00

No. 303 Millers Falls Hand Drill

Hollow end handle, quickly detached and with receptacle large enough to hold any twist drills within capacity of tool. Three jaw chuck holds round shanks up to $\frac{1}{2}$ -inch diameter. Length, 11 $\frac{1}{4}$ inches. Weight, 1 $\frac{1}{2}$ pounds.
Price each.....\$2.65

No. 5 Millers Falls Hand Drill

Hollow end handle, with screw cap, containing 8 wood boring points, $\frac{1}{8}$ to $\frac{1}{4}$ -inch. Large gear has wide rim to be grasped between thumb and fingers when delicate work is being done. Provided with idler gear to equalize bearings. Three jaw chuck with $\frac{1}{2}$ -inch capacity. Length, 12 $\frac{1}{2}$ inches. Weight, 1 5-6 pounds.
Price each.....\$3.50
Fluted drill points. Price per dozen.....1.00
Fluted drill points. Per set of 8......50

No. 105 Millers Falls Hand Drill

A new tool with three jaw chuck of the Star pattern. Jaws open evenly by means of springs which will not get out of order. Holds round shanks to $\frac{1}{4}$ inch. Hollow end handle with screw cap. Contains 8 wood boring points. Length, 12 $\frac{1}{2}$ inches. Weight, 1 $\frac{1}{2}$ pounds.
Price each.....\$3.60
Extra drill points same as above.

No. 2 Millers Falls Hand Drill

Hollow end handle with screw cap. Shaped to be used as a breast drill if desired. Contains 8 wood boring points. Removable side grip handle. Three jaw chuck with $\frac{3}{8}$ -inch capacity. Length, 14 $\frac{1}{2}$ inches. Weight, 2 $\frac{1}{2}$ pounds.
Price.....\$4.80

No. 980 Millers Falls Hand Drill

Instantly changeable speed, 1 $\frac{1}{2}$ to 1 and 4 to 1, operated by shifting knurled ring B. Chuck is Star pattern, three jaw, capacity $\frac{3}{8}$ -inch. Hollow end handle detached by loosening knurled nut and pressing on plunger, A. Ball thrust bearing at C. Length, 15 $\frac{1}{4}$ inches. Weight, 3 $\frac{1}{2}$ pounds.
Price each.....\$3.80

No. 1980 Millers Falls Hand Drill

This tool is equipped with all the features of No. 980, and in addition is provided with a simple and effective ratchet, operated by raising and turning to right or left cap to a small boss on crank handle. Very convenient for crowded places and for delicate work. Capacity of chuck, $\frac{3}{8}$ inch. Length, 15 $\frac{1}{4}$ inches. Weight, about 3 $\frac{1}{2}$ pounds.
Price each.....\$8.00

No. 12 Millers Falls Breast Drill

Completely equipped with ball bearing. Patent level attachment. Changeable speed from even to 3 to 1. Breast plate adjustable for different positions and removable. Extension crank with radius from 4 to 6 inches, adding to the power of the tool. Length, 17 $\frac{1}{2}$ inches. Weight, 6 $\frac{1}{2}$ pounds.
No. 12. With master chuck, holding round shanks from $\frac{1}{8}$ to $\frac{1}{2}$ inch, all sizes of bit stock and No. 1 taper shanks. Price each.....\$5.80

No. 13 Millers Falls Breast Drill

Extension crank with radius 5 $\frac{1}{2}$ to 7 inches. Speed of gearing 4 $\frac{1}{2}$ to 1, with idler to equalize bearings. Patent level attachment. Ball thrust bearing. Breast plate adjustable and removable. Length, 15 inches. Weight, about 5 $\frac{1}{2}$ pounds.
No. 13. With master chuck described above. Capacity, $\frac{1}{2}$ to $\frac{1}{2}$ inch. Price each.....\$7.90

Millers Falls Breast Drills No. 15

D handle is removable and adjustable to different positions. Extension crank has radius from 4 to 6 inches. Changeable speed from even to 3 to 1. Ball thrust bearing. Patent level attachment. Finely finished and nicked. Cut gears, and idler to equalize bearings. Length, 19 inches. Weight, 6½ pounds.

No. 15. With Master chuck holding round shanks from ½ to ¾-inch, bit stock, and No. 1 Morse taper shanks. Price each \$5.80

Miller's Falls Breast Drill No. 19

Rolled steel stock detachable from frame. Breast plate adjustable to different positions. Adjustable crank with radius from 4 to 7 inches. Cut gears. Ball thrust bearing. Changeable speed from even to 3 to 1. Change of speed is accomplished without removing bit from work. Barber improved chuck. Length, 18 inches. Weight, 6¼ pounds. Price each \$4.45

Millers Falls Breast Drill

Nos. 200, 199, 200
and 99

Breast plate is adjustable to different positions and made to fit the hand. When grasped with the middle finger through the hole provided for it, the tool can be easily held and steadied in awkward places when breast plate must be held in the hand. An auxiliary breast plate is also provided, for heavy work. Crank handle is adjustable to two positions, one at right angles, the other in line with the crank. Tool is also provided with a ratchet, operated by slide on crank handle. Changeable speeds from even to 3 to 1. Length, 18 inches. Weight, 7 pounds.

No. 200. With Star chuck, holding round shanks from 0 to ½-inch. Price each \$9.40

No. 199. Same as No. 200, except with Master chuck, holding round shank bits ½ to ¾-inch, bit stock, and No. 1 Morse taper shanks. Price each \$8.25

No. 100. Same as No. 200, except without ratchet and adjustable crank features. Price each \$7.60

No. 99. Same as No. 199, except without ratchet and adjustable crank features. Price each \$6.60

Millers Falls Breast Drills Nos. 97 and 96

Breast plate is adjustable to different positions at right angles to each other by loosening a knurled nut (A), and is made to fit the hand with finger hole for holding drill in awkward places. An auxiliary breast plate is furnished and is clamped on over regular plate, being more comfortable for heavy work. Ratchet adjustment is controlled by knurled screw (C) and includes the following actions: With-out ratchet as an ordinary breast drill, right hand ratchet, left hand ratchet, continuous right hand action and continuous left hand action, i. e., chuck turns continuously onward whether crank is moved toward right or left.

Crank handle is adjustable to two positions, at right angles to crank and in line with crank. Two speeds, 2¾ to 1 and even instantly changeable, without removing drill or work. Gears can be locked for changing drills. Double geared, cut teeth. Ball thrust bearing with take up for wear. Length, 17½ inches. Weight, 8¼ pounds.

No. 97. With Star chuck, holding round shanks from 0 to ½-inch. Price each \$13.45

No. 96. Same as No. 97, except ratchet mechanism does not have the continuous onward movements. Price each \$12.00

Yankee Breast Drills

With right and left hand and continuous ratchet movement, or can be used without ratchet. Gears can be locked for opening or loosening chuck. Breast plate is adjustable. Adjustable ball bearings for taking up wear. All gears have cut teeth. Crank is 5½ inches long. Chuck jaws are drop forged steel. Frame is malleable iron with dead black finish. Side handle has a screw driver bit to adjust screws on drill. D handle to use in place of breast plate for overhead work can be furnished as an extra part at price of \$0.30 each net.

No. 1555. With double speed and three jaw chuck, holding round shanks only up to ½-inch. Weight, 6¾ pounds. Price each \$10.80

No. 1550. Same as No. 1555, except single speed only. Weight, 5¾ pounds. Price each \$9.15

No. 555. With double speed and two jaw chuck, holding round or square shank drills up to ½-inch. Weight, 6¾ pounds. Price each \$10.80

No. 550. Same as No. 555, except single speed only. Weight, 5¾ pounds. Price each \$9.15

No. 22 Bench Drill Press

A simply constructed standard and fixtures to hold any of the Millers Falls hand drills shown in this catalog. All steel and iron parts are japanned. Provided with sensitive compound lever feed and adjustable clamp to hold drill. Height between chuck and table when chuck is raised to its highest point, 6½ to 7½ inches, depending upon drill used. Height of standard above bench, 15½ inches. Weight 8 pounds.

Price without hand drill.....\$4.00

No. 20 Universal Hand Drill Press

This standard and fixtures will hold any of the Millers Falls breast drills shown in this catalog except Nos. 13, 13A and 19. Equipped with sensitive hand feed. Drill may be swiveled into many positions and clamped at varying heights, either above or below the bench. Vise swung on pin off center, permitting its use in many positions; may be used horizontally, or at an angle or reversed and table turned uppermost. Height of standard 24 inches. Weight boxed, 28 pounds.

Price without breast drill...\$10.00

Angular and Ratchet Drilling Machine

This machine is attachable to bench or to object to be drilled. Drills vertically at any angle desired, above or below bench. Hand feed. Ratchet attachment. Extensible from standard:

No. 1 Machine, 4½ to 5½ inches; No. 2, 6 to 8 inches; No. 3, 7 to 10½ inches. Socket hole in spindle for ½-inch round shanks, but bored for ¾-inch without extra charge. One ¼-inch drill to fit socket and Star chuck to hold round shanks up to ½-inch furnished with each machine, but omitted when machine is made to order with taper socket.

No. 1, speeded; ball bearing. No. 2, with two sets of gears making either speeded or geared back; hardened anti-friction bearings. No. 3, geared back; hardened anti-friction bearings.

No. 210 Bench Drill Press

Provided with changeable speed, 1½ to 1 and 4 to 1. Crank is adjustable from 3 to 6-inch radius. Table with swivel arm may be raised within range of 2 inches. Hand feed. Wrench furnished to fit all nuts on tool.

Chuck of Star pattern, holding round shanks up to ½-inch. Maximum distance from chuck to table 9 inches. Height over all 24 inches. Frame finished in gray, with red trimmings. Large gear enameled black. Weight boxed, 27½ pounds.

Price each.....\$14.75

No. 216 Bench Drill Press

Provided with two grades of automatic positive feed. Also hand feed. Change of speed is instantaneous. Speeded even and 3½ to 1. Chuck of Star pattern with 3 jaws holding round shanks up to ½ inch. Maximum distance from chuck to column, 8 inches. Height over all, 28 inches. Frame finished in gray with red trimmings. Weight boxed, 50 pounds.

Price.....\$25.50

No. 217 Vise

For No. 216 drill. Has detachable swivel jaw. Vise opens 2½ inches; without swivel jaw, 3 inches. Width of jaws, 2½ inches. Weight, 4¾ pounds.

Price each.....\$3.15

Yankee Bench Drills

These drills have two feeds, friction feed for rapid movement of spindle, and ratchet, to feed drill. Feed is adjusted for drills from No. 45 up, to work without breaking, and is thrown off automatically top or bottom to prevent jamming. Table has vertical adjustment on bracket, also adjustable bracket. Both are removable.

Chuck is of steel with hardened jaws. Spindles are of steel. Gears have teeth of extra strength, cut from the solid metal. Pinions are of steel, also the feed screws with ball bearings at end.

*No. 1 or small drill socket is 3/8-inch square at small end and 1/2-inch square at large end.

†No. 2 or large drill socket is 1/2-inch square at small end and 3/4-inch square at large end.

By means of sleeves and sockets can be made to take smaller size drills, drills with square tapers and blacksmiths' straight shank drills.

Armstrong "Standard" Reversible Ratchet Drills

Ratchet is operated by knurled screw at side of handle. Will ratchet either way. No drift is required, as drill is discharged by feed screw.

Made of drop forgings and bar steel, all parts carefully hardened.

18-C	10.75	18	No. 1 Square Taper and No. 3 Morse
22-C	11.50	22	No. 2 Square Taper and No. 4 Morse

*No. 1, or small drill socket, is $\frac{3}{8}$ -inch square at small end and $\frac{5}{8}$ -inch square at large end.

†No. 2, or large drill socket, is $\frac{1}{2}$ -inch square at small end and $\frac{3}{4}$ -inch square at large end.

No. 1 square taper is the most popular size.

By means of sleeves and sockets these ratchets can be made to take smaller size drills, drills with square tapers and blacksmiths' straight shank drills. Packed one in a box.

Drills for use in the above are listed elsewhere. See index.

The Armstrong Short Ratchet Drill

Its short head, strength, compactness and quick reverse make it a perfect boiler ratchet. Has a long feed and a short head, making it especially desirable for drilling in close quarters.

Style	Price Each	Length Over All, Inches	Size of Socket or Hole	Length of Head, Inches	Feed, Inches	Weight, Pounds
A-2	\$ 8.00	12	No. 1 Taper Square Shank	2 3/4	1 1/2	6

R-3	10.00	18	No. 3 Morse Taper Shank	3 3/4	2 1/2	9

Extra spindles, Styles A, E or R, with nut and feed screws. \$3.50
By means of sleeves and sockets, these ratchets can be made to take smaller size drills, drills with square taper and blacksmith's straight shank drills.

Packed One in a Box.

The Renshaw Ratchet Drill

These tools are made in two sizes—No. 1 taking drills to 3/4-inch, No. 3 taking drills to 1 1/2 inches. All the parts are made from steel and hardened.

No. 1 has one collet for drills, with shank 1/4-inch square at shoulder, and one collet for drills fitting No. 1 Morse's standard taper socket.

No. 3 has one collet, No. 5, for drills, with shank 1/4-inch square at shoulder, of 1/2 to 1 1/2 inches diameter, which are the extreme sizes that this ratchet is adapted to carry, and collets Nos. 1, 2 and 3, for Morse's standard taper shanks. No. 3 and No. 5 collets are held in the spindle by screw thread. No. 1 and No. 2 collets are tapered externally to fit No. 3 socket.

No.	Price Each	Length of Handle	Depth of Head	Depth of Feed	With Collets
1	\$11.00	9 1/2	3	1 1/2	With 2 Collets
1	9.40	9 1/2	3	1 1/2	With 1 Collet
3	15.00	18	5	2 3/4	With 4 Collets
3	11.06	18	5	2 3/4	With No. 3 or 5 Col.
3	13.25	18	5	2 3/4	With No. 1, 2 or 3 Col.

No. 1 Collet with square or taper hole. \$1.60
No. 1 or 2 Collet for No. 3 ratchet. 1.10
No. 3 or No. 5 Collet for No. 3 ratchet. 1.75

Armstrong Universal Ratchet

For general use in machine shops and structural iron and bridge work in setting up work. Very efficient for close, cramped positions. Two inches of motion at end of handle in any direction will drive drill.

Price with One Spindle

Number	4	5	6

S	No. 6	With No. 4 Morse Taper Shanks

Note.—When ordering specify style spindle wanted. We ship No. 4 ratchet equipped with M spindle, No. 5 ratchet with J spindle, and No. 6 with F spindle, unless otherwise ordered.
By means of sleeves and sockets spindles can be made to take smaller sizes of Morse taper shank drills, drills with square taper shanks and blacksmith drills.

The Satco Reversible Ratchet

This ratchet may be used for all classes of work, as the size and style of drill may be instantly changed without using either tools or force. An interchangeable feed screw sleeve allows worn out threads to be replaced, thus making ratchet equal to new. Any style of drill shanks may be used—Morse, taper, square shank and flat twisted drills. The short head enables operator to work at close quarters, while a patent reversible device in the end of handle makes ratchet suitable for either right or left drilling. All moving parts are protected and there are no small screws, pins, etc., to get out of order. This ratchet possesses great strength, is light in weight and of good appearance.

No.	Takes Morse Taper	Length, Ins.	Length Head, Inches	Feed, Ins.	Weight, Pounds	Price
1	No. 1	9 1/2	2	1 1/2	1 1/2	\$9.00

End.....	Cabinet	Regular	Cabinet	Regular

Set No. 2 contains 1 friction drive handle with 4 jaw screw chuck, 4 screw driver bits as in Set No. 1, also 1 special screw driver bit with 3 driving projections so that a screw can be driven from the side with an angular motion of only 60 degrees. Price complete in canvas roll \$1.10

Set No. 3 contains 1 friction drive handle with 4 jaw screw chuck, 5 screw driver bits same as in Set No. 2, and the following crucible steel tools: 1/2-inch gimlet bit; flat counter-sink; 1/2-inch gimlet bit; tapered reamer; sharp point awl; 1/2-inch brad awl. Price complete in canvas roll \$2.10

Set No. 4 contains 1 friction drive screw driver handle with 4 jaw screw chuck, 5 screw driver blades same as Set 2, 6 tools same as Set 3, also a tap holder and threading die holder. The threading die holder holds 5/8-inch round adjustable dies and has set screws for adjusting the dies as well as holding die all sizes of machine screw taps from No. 2 to 10. Price complete in canvas roll \$2.10

No. 30 "Yankee" Spiral Ratchet Screw Driver

Drives or draws screws by pushing on handle or by ratchet movement on handle, three bits are included with each tool, extreme length with bit in chuck, extended 19 1/4 inches, closed 13 1/4 inches.

Price each.....\$3.20

No. 31. Extended 26 1/4 inches, closed 17 1/4 inches.

Price each.....\$4.30

Yankee Quick-Return Spiral Ratchet Screw Drivers

These are the regular Nos. 30 and 31 drivers with a spring in the handle which causes the handle to come back for the next push in driving screws in or out.

No. 130. Extreme length with bit in chuck, 20 3/4 inches.

Price each.....\$3.30

No. 131. Extreme length with bit in chuck, 28 inches.

Price each.....\$4.30

No. 11 Yankee Ratchet Screw Driver Right and Left Hand Ratchet and Rigid

Adjustment for right or left hand ratchet is made by slide in section across length of blade.

Length blade, inches.....\$0.85 \$0.90 \$1.00 \$1.15 \$1.35 \$1.55

Price each.....\$0.85 \$0.90 \$1.00 \$1.15 \$1.35 \$1.55

No. 12 "Yankee" Ratchet Screw Driver

This is the same tool as the 6-inch No. 11 "Yankee" ratchet screw driver, except that the blade is only 1 1/4 inches long, and made for special use of gunsmiths, fitters, electricians and mechanics requiring a strong, substantial screw driver with a short blade.

Made in one size only: Blade 3/4-inch diameter, 1 1/4 inches long, entire length of screw driver 5 3/4 inches.

Price each.....\$1.05

No. 15 "Yankee" Ratchet Screw Driver Right or Left Hand and Rigid

A light blade screw driver for small screws in electric work. It has on its blade a knurled washer, as shown in cut, and means of this blade can be turned with a finger and the thumb.

Length blade, inches.....\$0.75 \$0.80 \$0.90 \$0.95

Price each.....\$0.75 \$0.80 \$0.90 \$0.95

No. 20 "Yankee" Spiral Ratchet Screw Driver

Made for special class of work, where driving of screws is the only requirement. Blade can be used rigid as in an ordinary screw driver.

Number.....1 2 3

Length over all, extended, inches.....14 17 19

Length over all, closed, inches.....10 12 13

Price each.....\$2.15 \$2.45 \$2.80

Attachments for Yankee Spiral Ratchet Screw Drivers

The following attachments cost little and add very much to the all-around usefulness of the tools.

In ordering attachments he particular to state for what style and size spiral ratchet screw driver they are wanted.

Chuck and Drill Points

Chuck

HALF ACTUAL SIZE

Those for Nos. 30 and 131 have shanks 1/4-inch diameter and also fit No. 20, size 3.

Price per set, chuck and drill points.....\$1.25

Price per set, drill points only.....1.00

Bit with Screw Holder

A longer bit than regular, with holder for screw attached. Especially useful in places difficult to reach, or where only one hand can be used. The jaws open as the head of screw sinks into the wood.

Made for Nos. 30, 31, 130, 131 and 20, sizes 1, 2 and 3.

Price each.....\$1.00

Combination Screw Driver and Hammer

A very practical tool with a folding "T" handle which can be used as a hammer for starting screws. It can be instantly changed so as to conform to an ordinary screw driver and is fitted with spring which holds blade rigidly in either position. Owing to the increased leverage due to its shape, the T handle is very useful for setting screws firmly. It is knurled to insure a good grip and is nickel plated. The blade of screw driver is of best quality forged, tempered and hardened steel.

Length of blade, inches.....	4	6
Length over all, inches.....	7 1/2	10

Price per dozen.....	\$7.80	\$9.00
Price each.....	.75	.90

Three Bit Perfect Handle Screw Driver

A three-bit screw driver. Considerable leverage can be obtained and screws can be operated in out-of-the-way places. 9 inches over all, 5-inch blade length. Bits 3/4 inch wide, 1 1/4 inches thick, shank 1/2 x 3/8 inch.

Price per dozen.....\$6.00

Price each......60

All Steel Screw Driver

Being all steel in construction, stubborn screws may be taken out with a wrench applied to the shank or the handle, or a hammer may be used without fear of injuring the handle. Length over all, 9 inches. Is also useful as a tire remover.

Price each.....\$0.50

Patented Steel Tool Chests

Made from $\frac{1}{2}$ -inch cold rolled steel with malleable iron corner pieces and box wood braces, and fitted with heavy wrought iron hinges and hasp, with cover so arranged as to be held open by support from back of chest. Provided with a good brass lock and two keys and bolts to screw down cover at front corners. They will outwear several wood chests, and are lighter in weight. Nicely painted and well proportioned. Recommended especially for plumbers' and steamfitters' use and construction shops. No. 3 chests and larger sizes have handles on four sides.

Cold Chisels

We furnish cold chisels in two grades, "Extra" and "Regular." "Regular" quality is always furnished unless otherwise ordered. "Extra" cold chisels are forged from highest grade octagon crucible steel, oil tempered, polished bevel and head, natural finish body. Warranted to stand the hardest usage. "Regular" cold chisels are forged from high grade octagon steel. Oil tempered.

Knurled Cup Point Nail Set

Made from the finest tool steel, 3/8-inch in diameter, knurled as shown in cut, and tempered the entire length. Sizes, 1/2, 3/4, 1, and 1 1/4-inch.

Price per dozen.....	\$2.00
Price each.....	.20

Knurled Center Punches

These punches are the champion tools to nail sets, above described, and are tempered their entire length. The diameter of steel at knurling is 3/8-inch.

Price per dozen.....	\$2.00
Price each.....	.20

Square Head Nail Set

Hand forged from the finest crucible steel, electrically tempered. This is a new tool of distinctive features. Body is specially knurled and head is 3/8-inch square. Carpenters and other users of this tool will appreciate the knurling, which is easy on the fingers, and the square head admits of its being laid down with no danger that it will roll off the bench.

Length, 1 inches. Sizes, 3/4, 1, 1 1/4 and 1 1/2-inch. Weight 1 1/4 pounds per dozen.	
Price per dozen.....	\$2.50
Price each.....	.25

Chisel Sets

This set of chisels consists of six of the most commonly used chisels. Indispensable to die and tool makers. Made by hand of high grade steel. Set consists of one each of the following:

Glass Cutters

No. 1. The turret head glass cutter is a novel feature recently placed on the market. The turret-like holder holds six cutters which may be revolved on or clamped to the frame by means of the screw at the center, the head of which appears on the reverse side of the tool from that shown in the cut. Any of the cutters may be instantly placed in position. The turret may be removed if desired and new cutters inserted in a minute's time. Polished and nicked frame, turret holder, six cutters, nickel-plated ferrule, rosewood handle. Each in separate carton, 12 cartons to a box.

Price per dozen.....	\$4.00
Price each.....	.40

No. 337. Wheel glass cutter. Gives perfectly smooth cut. Polished and red finish. Metal handle.

Price per dozen.....	\$2.00
Price each.....	.20

No. 1

No. 337

"Carolus" Nut Splitter and Bolt Clipper

Will cut nuts, bolts or iron at almost any angle. Reaches all corners and depressions that side cut clippers cannot.

Number	Price	Parcel Post Weight, Pounds	Cuts to, Inches
0N	\$2.60	4	1 1/2
1N	3.50	7	2 1/2
2N	4.70	11	3 1/2

"New Easy" Bolt and Rivet Clippers

Will cut annealed bolts from $\frac{1}{8}$ to $\frac{1}{2}$ -inch. A force of 26 pounds applied to the handles exerts 2,000 pounds at the cutting jaws. The handles are malleable iron, and the jaws are high grade tool steel, carefully tempered for their purpose, and can be pressed when necessary with a mill file. Jaws adjusted to take up wear by turning a screw. All parts are interchangeable. Cutting blades should be oiled frequently.

No.	Price Each	Jaws per Set	Cuts Bolts up to, Inches	Length, Inches	Weight, Pounds
0	\$3.75	\$1.35	$\frac{1}{8}$	18	3
1	5.00	1.65	$\frac{1}{4}$	24 1/2	5 1/4
2	7.00	2.35	$\frac{3}{8}$	30	9
3	9.00	3.00	$\frac{1}{2}$	36	13

Compound Lever Snips

Forged from solid bar high grade crucible steel, carefully made, tempered and ground. Designed for heavy work. The compound leverage distributes the cutting power full length of blade. With the larger sizes four thicknesses of 24 gauge metal may be cut at the throat, middle, or point of the blades with practically the same pressure of the hand. Thicker metal can be cut at the points of the blades than at the throat of an ordinary snip.

No.	Price Each	Length Blade, Inches	Total Length, Inches	Weight, Ounces
7	\$1.00	1 1/2	7	5 oz.
8	1.50	2	8	10 oz.

Telephone Wire Snips

A strong short snip for cutting small soft wires. Nickel plated. Length 5 1/2 inches. Price each \$1.00

H. Channon Company Chicago

Combination Pliers

Style of 8 and 10-inch Size

Genuine B. & S. Combination Pliers

Strictly high grade material is used in the manufacture of this plier. Otherwise it is the same as above.

Length, inches	6	8	10
Black, price per dozen	\$13.50	\$16.00	\$18.00
Black, price each	1.35	1.60	1.80
Nickel, price per dozen	15.00	18.00	21.00
Nickel, price each	1.50	1.80	2.10

For automobilists, machinists, repairmen, gas fitters, plumbers, etc., this tool is indispensable. It is superior to the ordinary combination plier in three respects—first, the nose is not quite as round, which makes it more useful in corners and out of the way places; second, it has a socket for use on presto-light tanks; third, the handles are knurled enabling the user to secure a better grip. By opening the plier full, it can easily be changed from gas pipe size to 1/2-inch pipe size. 8 and 10-inch sizes take 1 1/2-inch pipe. Drop forged from tool steel, oil tempered and nicked. First class in every respect. 6-inch, black, has no presto-light socket.

Length	6	8	10
Capacity, inches	1	1 1/4	1 1/2
Black, price per dozen	\$13.50	\$16.00	\$18.00
Black, price each	1.35	1.60	1.80
Nickel, price per dozen	15.00	18.00	21.00
Nickel, price each	1.50	1.80	2.10

Auto Tire Chain Repair Tool

Used to open automobile tire chains, to remove links and to clamp down on chain links in putting in new sections. Length 12 1/2 inches. Oil finish. Price each \$1.00

Gittatit Offset Combination Slip Joint Pliers

Mechanics in all lines of work will find this new plier a very convenient tool. It will do practically all the work of the ordinary plier and will go into many out of the way places where others will not. It can be used as a cotter pin extractor and a wire cutter as well. The offset head permits plenty of room for the hand when working on flat surfaces, or around corners and still allow a flat, right angle, forceful grip. Made in one size only, 7 inches long. Price per dozen \$6.00. Price each 0.50

Parallel Grip Combination Pliers

These pliers are a great improvement over the ordinary combination pliers. They will hold securely any irregular shapes, such as taper, half-round and triangular, as well as rectangular, parallel and round objects. Straight jaw has a V groove for holding wire and rods parallel to the jaw. There is also a convenient wire cutter and screw driver. Length 7 inches. Price per dozen \$6.00. Nickel finish. Price each 0.50

Burner Pliers

Made of extra refined steel, drop forged, oil tempered, highly polished. Handles blued. The most approved pattern.

Length, inches	5	6
Price per dozen	\$5.85	\$6.30
Price each	.58	.63

Gas Pliers

Long and thin in construction for use in difficult places. Screw driver end.

Bernard Music Wire Cutters

No. 135. Made especially for cutting hardened steel wire.

Length, 5 inches.....	
Price dozen.....	\$17.00
Price each.....	1.70

Starrett's No. 1 Adjustable Jaw Cut Nipper

Jaws are detachable so they can be removed, ground and adjusted when worn. Each jaw can be ground away, 1/4-inch remaining as good as new for all practical purposes. When used up, new jaws can be obtained. Head and handles are of drop forged steel, finely finished, all parts are case hardened except jaws which are made from a high grade of steel, nicely tempered. The 5 1/2-inch nippers open 3/4 inch, and the 7-inch open 1 1/2 inch.

5 1/2-inch, M (for music wire).....	Price each.....	\$2.75
5 1/2-inch, C (for common use).....	Price each.....	2.75
5 1/2-inch, B (for bicycle use).....	Price each.....	2.75
7 -inch, either M, C or B.....	Price each.....	3.25
Extra jaws, either M, C or B, which should be designated as above, per pair.....		\$0.50

Unless otherwise ordered, cut-nippers with M jaws will be sent.

Starrett's No. 235 Tile Cut Nipper

These nippers are similar to No. 1, except that frames are cut out to allow jaws to be adjusted for wide opening, thus fitting them to be used for cutting tile.

Size 5 1/2-inch.....	Price each.....	\$2.75
Size 7 -inch.....	Price each.....	3.25

Utica Diagonal Cutting Pliers

No. 42. Used by electricians and other electrical workers. Cutting edges are made so they will cut silk covered wire without injuring the covering or bruising the wire. Will also cut small diameter music wire. Although not shown in illustration, handles are checkered.

Length, inches.....	5	6
Price dozen.....	\$10.50	\$14.00

Klein's Electricians' Linemen and Mechanics' Tools

Pole Supports

This construction is distinctly superior to the ordinary article. The uprights are 2x4 dressed on all sides. The joint where the uprights cross is gabled and the joint reinforced by strong iron plates bolted through the uprights. The bottom has spiked iron shoes bolted through the uprights.

No. 4004-6. Size 6 feet. Price Ea. \$7.50

No. 4004-7. Size 7 feet. Price Ea. 8.25

No. 4004-8. Size 8 feet. Price Ea. 9.00

"Staysalite" Linemen's Torch

Small and light in weight. Stays lit in the wind, burns alcohol without odor or noise. Can be used as a small heater for soldering iron.

Provided with a cup for holding soldering paste. To suspend the torch on a wire under a joint, place the wire in the slots on the upper edge of the rim, give the body of the torch a half turn in the opposite direction, and it is off. Drop it back in your belt by means of the hook.

Price each.....\$10.00

Pay-Out Reel on Barrow

Constructed of hardwood and reinforced with steel plates. The barrow is supported by substantially made steel legs, side braced and bolted through the wood. Will stand

hard usage. Guard pins are adjustable for 12, 18 and 24-inch coils. Weight, 80 pounds. Price each \$16.00

Extra heavy reel. Weight, 90 pounds. Price each.....\$20.00

Improved Take-Up Reel

Showing How Cross Piece Can be Detached for Removing Coil of Wire

Constructed of oak throughout. Solidly built, securely bolted and riveted. Cross sections fully mortised and bolted. Sides are steel braced. Has separate guard base which slips over shaft and fastens with a flat key, allowing wire to be removed easily.

No. 4608-3. For 18-inch coil. Price each.....\$30.00

No. 4608-4. For 21-inch coil. Price each.....30.00

Cable Reel Jack

A pair of these jacks will support cable reels of any size while the cable is being run off. The forked head will hold a 2 1/2-inch diameter shaft and will swivel to any position. The cable may be raised or lowered while it is supported on the jacks. The screw is operated by inserting a bar into the holes in the head of the screw. These jacks are fitted with 2x16-inch locomotive jack screws, braced on oak bases. No. 4700-2 is same as 4700-1, but with ratchet operated screw.

No. 4700-1. Price each.....\$25.00

No. 4700-2. Price each.....35.00

Cable Sheath Splitting Knives

Knife edge tempered and ground to keen edge. Forged complete in one piece. Handle and blade made of tool steel.

Price per dozen.....\$12.00

Price each.....1.20

Cable Stripper Knife

3 1/2-inch blade. Length overall, 8 1/2 inches. For stripping heavy insulated wire and cable. Hardwood handle. Blade securely riveted in handle. Rivet is deeply countersunk, eliminating chance of shock.

Price per dozen.....\$18.00

Price each.....1.80

"Xela" Special Cableman's Saw

Has coarse teeth on one side for cutting through lead cable sheath. Other side has fine teeth for cutting through the wire core. 14-inch blade, 18 inches overall.

Price per dozen.....\$16.20

Price each.....1.60

Common Pay-Out Reel

Substantially built of hardwood and reinforced with steel plates. We also furnish reel spools with turnpin and disk, without base, for wagon reels or for multiple stringing.

Guard pins are adjustable for 12, 18 or 24-inch coils. Price each.....\$10.00

Made in the following voltage ranges: 95-104, 105-114, 115-125, 190-209, 210-229, 230-250.

Furnished with 6-foot cord and lamp socket attachment plug.

Allen Aluminum Flux

Non-acid and used with ordinary solder. It may be used as a solder where no part of it is exposed to the air.

Recommended as a flux, and very inexpensive as little is needed, and as no other flux or acid is required. Price per pound.....\$1.00

Allen Soldering Liquid

For all flat, straightway soldering, as well as surfaces involving small crevices where liquid goes most easily, Allen Soldering Liquid gives the best results.

Can be applied with brush or squirt can, and makes positive and sure unions between practically any metals except aluminum. It contains no acid, will not corrode and is non-poisonous.

5-pound bottles, price each.....\$1.75
10-pound cans, price each.....3.00

Prices on larger quantities quoted upon application.

Allen Soldering Salts

This comes in pulverized form, making it easy to ship and handle. By adding water, 3 parts water to one part of the salts, a perfect liquid flux is obtained of sufficient strength for use in soldering old metals.

A gallon of water to one pound of salts makes an excellent flux for bright tin work, etc.

½-pound bottles, price each.....\$0.50

1-pound bottles, price each......55

5-pound bottles, price each.....3.10

Allen Fountain Brush

This ingenious device for facilitating the application of liquid flux, consists of a container, which serves as a handle, one end of which has a removable cap for filling. The flux passes through the tube and trickles through the bristles.

Price each.....\$0.60

Allen Soldering Stick

The Allen Soldering Stick is the handiest method of applying flux to exactly the right spot. Can be used to the extreme end. Non-acid; non-corrosive, and non-poisonous. Size 1x5½ inches.

Price each.....\$0.20

Allen Soldering Paste

Allen Soldering Paste is the same compound as the soldering stick, except in softer form, making it much more convenient for many kinds of work.

Babbitt Metals

Onoko is packed in 28, 56 and 112-pound boxes.

Onoko babbitt metal is an alloy of metals possessing the requisite hardness and anti-friction qualities to make it satisfactory for all general work.

What Onoko Metal Will Do

We do not claim that Onoko is as hard as genuine babbitt metal or that it will give satisfactory service under all conditions, but do claim that for 98 cases out of 100 it is the best value on the market.

It is especially adapted for general machinery bearings in mills, factories, steamships, railroads, etc. Many tests under crushing loads in factories and shops have proven its superiority. It is made from a special formula, under skillful direction. The result is a metal that always runs smooth and cool, that is adapted for medium and low speeds on all classes of transmission bearings, and is the best and most economical babbitt metal that can be used. Its low coefficient of friction effects a large saving in oil and permits the use of very moderate priced lubricants. Onoko babbitt metal always permits the fullest motive power and thus increases the efficiency of any machinery on which it may be used.

We are very confident of Onoko babbitt metal because we know it will accomplish all we claim for it. It is cheaper and far better in every respect than many widely advertised brands. Its continued use is a money saving habit. A trial order is all that is necessary to convince and to secure a lasting customer.

Block Tin

Pigs weigh about 100 pounds. Market rates.

Curved Bearing Scraper Sets

No. 1765. Made of high grade steel, hollow ground, sharpened ready for use. Used by engineers and automobile repair men. Ends are polished. Handles are hardwood. One set packed in a box.

Price per set \$1.50

Engineer Bearing Scraper Set

No. 1750. Made for use of high class mechanics. Set consists of 4 bent blades, 8, 10, 12 and 14 inches long. 1 double end blade 10 inches long and 1 triangular blade 8 inches long. All packed in a golden oak box, as illustrated.

Price per set \$4.50

Three Cornered Automobile Bearing Scrapers

No. 1754. Hardwood, mahogany stained handle. Blade hollow ground and sharpened ready for use. A most useful tool to get into small bearings, and on small surfaces where a long or large scraper cannot be used. Length over all, 7 1/2 inches.

Price per dozen \$3.00

Price each30

Carbon Scraper Sets

For scraping the carbon out of cylinder heads through the spark plug and valve openings. The removal of the carbon often saves tearing down entire engine, and often increases pulling power of car over 50 per cent.

Ends of scraper are left untempered to prevent them from scratching sides of cylinder. Set consists of 1 out turn end, 1 in turn end and 1 curved end. Length over all, 16 inches.

Price per set \$1.00

Boughton Lumber Crayon

Boughton lumber crayons are unequalled for marking wet or dry lumber, steel, stone, etc. Made entirely from a special mineral compound containing absolutely no wax. Ground and moulded into hexagon form and covered with paper. The compound is colored with high grade dyes and is guaranteed absolutely waterproof. They are 5 3/4 inches long and 1/2 inch thick, and packed 1/2 gross in a box. Made in the following colors: Black, hard, soft and regular; blue, white, yellow and red.

Price per gross, white... \$1.20 Red or blue... \$1.60

Lump Chalk

In odd size chunks. Full barrels weigh about 500 pounds.

Price per pound..... \$0.10

Boughton Flint (Sand) and Garnet Paper

Raw materials of the highest quality are used in the manufacture of Boughton Flint Paper. The paper backing is flexible, tough and strong; the glue is high test and high grade, and the sand is clean and sharp. Pattern makers, painters, bench workers and wood workers generally find their work is made easier by using Boughton flint paper, and that it is fast cutting and of great durability. No. 3/0 to 1/2 are the finer numbers and are used to finish the surface after the rough cut with the coarser numbers (1 to 3). Full packages contain 1/2 ream; 24 sheets in a quire; 20 quires to a ream.

Boughton Garnet paper is harder, tougher and less brittle than flint and has, therefore, displaced that abrasive for many purposes in the wood working industries. It costs a little more, but lasts longer and does more and better work than flint paper, and is by far the cheaper in the long run. The numbers run the same as for flint paper with respect to their degree of fineness and coarseness.

Boughton Emery Cloth

A high quality cloth coated with imported Turkish emery, universally recognized as the best emery for abrasive purposes. Only high grade glue and a cloth backing which tears evenly and without raveling is used in the manufacture of Boughton emery cloth. The emery stays on and maintains its cutting edge even under the hardest usage. The finer grits, 3/0 to 12, are used to finish and polish metal surfaces and irregular metal parts, which are then ground with medium and coarse grits. The coarser numbers are used to remove stock before finishing with the finer grits.

Oil Stones

Hard Arkansas

Arkansas stones are hard and fine enough to remove every trace of burr from the cutting edge. Used by all makers and users of fine tools and instruments who require long lasting, keen cutting edges. Unmounted stones are packed in individual boxes. Mounted stones are furnished in durable hard wood boxes.

Unmounted		Price Each
Size	Dimensions, Inches	
4	3 3/4-4 1/2 x 2 x 3/4-1	\$1.75
6	5 1/4-6 x 2 x 3/4-1	3.50
8	7 3/4-8 x 2 x 3/4-1	5.00
Mounted		
Size, inches	4x1 1/2 6x2 8x2	
Price each	\$1.25 \$2.50 \$3.50	

Lily White Washita

For efficient tool sharpening many prefer Washita Oilstones. They are more porous and cut faster than Arkansas. The best natural stone for giving a long lasting edge to general woodworkers' tools. Mounted or Unmounted same as the Arkansas.

Unmounted		Price Each
Size	Dimensions, Inches	
4	3 3/4-4 1/2 x 2 x 3/4-1	\$0.50
6	5 1/4-6 x 2 x 3/4-1	.75
8	7 3/4-8 x 2 x 3/4-1	.85
Mounted		
Size, inches	4x1 1/2 6x2 8x2	
Price each	\$0.75 \$1.00 \$1.25	

Royal Edge Slips

For gouges, channel knives, bead planers, moulder knives and all curved surfaces. Size 3 3/4-4 1/2 x 1 3/4-2 x 3/4-1 x 1/2-3/4 inches. Hard Arkansas, price each.....\$1.00
Lily White Washita, price each......50

Pen Knife Pieces

Lily White Washita Stones. Size 3 3/4-4 1/2 x 1 3/4-3/4 inches. Price each.....\$0.35

Combination Stones

This combination possesses the advantage of two stones in one, coarse on one side for very dull or badly nicked tools, and the other side fine, for putting on a finishing edge. The two grits are vitrified, not glued together, making solid stones.

No. 0.	8 x2 x1 inches.	Price each.....\$1.50
No. 1.	8 x1 3/4 x1 1/4 inches.	Price each.....1.50
No. 1 1/2.	7 x2 x1 inches.	Price each.....1.25
No. 2.	6 x1 3/4 x 3/4 inches.	Price each......75
No. 24.	4 1/2 x1 1/2 x 3/8 inches.	Price each......50
No. 29.	6 x2 x1 inches.	Price each.....1.00
No. 63.	Circular 4 inches diam.	Price each.....1.25

India Oil Stones

India sharpening stones are made from Alundum, an artificial abrasive of extreme hardness, toughness and sharpness. Made in three grits as follows:

Coarse. For sharpening very large or very dull tools, nicked tools, etc., and are very fast cutting.

Medium. For ordinary sharpening or mechanics' tools not requiring finishing edge. Especially recommended for tool working soft woods, leather, etc.

Fine. For sharpening tools of machinists and engravers and all other users of tools requiring a very fine keen edge.

Illustrations showing the different shapes and prices will be found on the following page.

Mountings for India Stones

Wood Mountings

A wood mounting will keep stones clean and in good condition, thus prolonging the life of the stone. Made of solid oak and are supplied for the following shapes, which will be found illustrated and priced on the following pages: Nos. 0, 1, 1 1/2, 2, 3 and 29.

Price of Wood Mounting only.....\$0.35

Iron Mountings

These iron mountings are supplied with cork feet, which prevent slipping on the bench. A felt pad absorbs the surplus oil and keeps the stone ready for use. Furnished for the following shapes, which are illustrated and priced on the following pages: Nos. 0, 1 1/2, 2 and 29.

Price of Iron Mounting only.....\$0.75

India Oil Stones

Effective October 1, 1916

Norton Grinding Wheels

Alundum and Crystolon

The cutting materials used in Norton Grinding Wheels are Alundum and Crystolon. Both are Electric Furnace products, but differ radically in chemical composition.

Alundum is the most efficient for cutting material of high tensile strength, particularly all kinds of steel. It is adapted for grinding more kinds of metal and under a wider range of conditions than any other material.

Crystolon is highly efficient for grinding and polishing on such metals as cast iron, brass, bronze, also marble, granite and pearl—in general, all materials of low tensile strength.

Alundum in chemical composition is similar to the ruby and sapphire—the hardest natural minerals except, the diamond. The raw material used in making Alundum is known as Bauxite, the purest form of aluminum oxide found in nature. It is a soft clay like substance and is transformed in an electrical furnace into Alundum, a hard, sharp, product with remarkable cutting qualities. The physical formation of the grain of Alundum is such that when it is broken or fractured it leaves sharp cutting corners or edges. It has a very high melting point, a low coefficient of expansion and is a non-conductor of electricity.

Crystolon is also an electric furnace product, made from coke, sand, sawdust and salt. The characteristic property of brittleness makes it highly efficient for polishing and grinding such metals as cast iron, etc., as given above.

Testing for Safety

All Norton Wheels of 5 inch diameter and larger are tested at 9,000 surface feet per minute. As the usual working speed is from 5,000 to 6,000 feet, these tests insure a high factor of safety.

How to Order Grinding Wheels

We can make the proper selection of wheels suitable for the work if we are furnished the following information:

- (1) The kind of material to be ground, whether iron—cast, wrought or malleable—brass, composition, hard or soft steel, etc.
- (2) Speed of spindle.
- (3) Whether wet or dry grinding is done.
- (4) The diameter and width of wheel wanted.

Explanation of Grain and Grade

Grinding wheels are made in many combinations of coarseness and hardness to meet the variety of conditions under which they are used. These combinations are known as Grain and Grade.

GRAIN—The size or number of the abrasive grain used determines wheel's degree of coarseness.

GRADE—The degree of hardness of the wheel. The resistance of the cutting particles under pressure.

The following list is used to designate the degree of hardness of the wheel.

Medium Soft.	Medium.	Medium Hard.	Hard.
I J K L M N O P	Q R S	T U	

Conditions under which grinding wheels are used vary to such an extent that no absolute rule can be given for selecting the right grades for the work. The following table, however, will give an approximate idea of what is most commonly furnished for grinding each kind of material under ordinary conditions. It is merely intended as a guide for those who prefer to select their own wheels.

Table for Selection of Grades

Class of Work	Alundum		Crystolon	
	Grain	Grade	Grain	Grade
Aluminum castings.....			29 to 24	P to R
Brass or Bronze castings (large).....			29 to 24	Q to R

Grinding Wheels

We are prepared to furnish any of the leading brands of grinding wheels, such as Norton's Alundum, Crystolon, Carborundum, Abrasive and Emery wheels. Specify grain and grade desired or order of work for which they are intended. Also state at what speed wheel is intended to run.

Price List on All Wheels Mentioned Above—Regular Shapes

Diamond Hand Tools
For Dressing Emery Wheels

The black diamonds used in our tools are carefully selected both as to their quality and shape and will give complete satisfaction if not misused. The stones are mounted by a special process in a round steel shank $\frac{1}{4}$ x7 inches.

When using Diamond hand tools they should be brought gradually into contact with the object worked upon, because although extremely hard, they are brittle and shocks or jars should be avoided.

The price on Diamond hand tools varies according to the size of the stone. We invite correspondence on this subject and are always ready to give customers the benefit of our experience in selecting the proper stone for their requirements.

Diamond Grinder Tools

For Norton Grinder

Diameter, $\frac{1}{4}$ -inch.
Length over all, $\frac{3}{8}$ -inch.

For Landis Grinder

Diameter, $\frac{3}{8}$ -inch.
Milled to $\frac{1}{4}$ -inch.
Length over all, $\frac{3}{8}$ -inch.

Prices quoted upon application.

Unmounted Black Diamonds

The prices of diamonds vary according to the weight. An assortment of stones will be sent to responsible firms for selection. Correspondence on this subject is invited.

The Diamo-Carbo Dresser

Consists of a steel tube filled with an abrasive of such intense hardness that it will cut and dress any grinding wheel except the very hard grade or extremely coarse and large wheels used to grind castings. The abrasive wears slowly and lasts indefinitely.

Number	3	5	8	9
Diameter, inches	$\frac{3}{8}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{1}{2}$
Length, inches	10	12	10	12
Price each	\$3.50	\$4.00	\$3.50	\$4.00

Huntington Emery Wheel Dresser

A strictly high grade tool with hardened steel bushing. Cutters are milled from best quality steel, hardened and tempered, and have extra long teeth for hard wear. The washers, being tempered, do not prevent cutters from turning as in the case of untempered washers.

For use on the largest and hardest grinding wheels and where quick action is desired, the No. 12 extra large Huntington Dresser will be found practical and economical.

There is quite a demand for the No. 11 large Huntington Dresser where larger than the ordinary sizes, but not so large as the No. 12 is desired.

Regular size, diameter $1\frac{1}{2}$ inches, width of face, $\frac{3}{4}$ inch. Price each, with one set extra cutters.....\$0.75

Extra cutters, per dozen sets.....1.00

Extra cutters, each set......10

No. 11. Diameter, $1\frac{1}{2}$ inches, width of face $\frac{3}{4}$ inch. Price each, with one set extra cutters.....\$1.50

Extra cutters, per dozen sets.....3.00

Extra cutters, each set......30

No. 12. Diameter, $2\frac{3}{8}$ inches, width of face, $1\frac{1}{2}$ inches. Price each, with one set of extra cutters.....\$2.00

Extra cutters, per dozen sets.....6.00

Extra cutters, each set......60

Sherman Emery Wheel Dresser

Designed for hard, coarse or large wheels upon which a diamond could not be used.

A hood effectually protects the eyes from flying particles. It is being adopted by all shops where the employee's safety is of first importance.

No. 1, complete.....\$1.50

Extra cutters, same size as No. 11 Huntington. Price per dozen set of 3 each.....\$1.50

Each set......15

No. 2, complete.....\$2.00

Extra cutters, same size as No. 12 Huntington. Price per dozen sets of 4 each.....\$2.50

Each set......25

How to Use Dressers

The dresser must be forced against the wheel by fixing the work rest or some similar support at the right distance from and parallel to the wheel face.

With one hand pressing down on the handle near the cutter end, a slight upward pull is given with the other hand. This forces the cutters into the wheel. The dresser can then be moved along the work rest across the wheel face in both directions until the required condition is obtained.

If sparking occurs, use greater pressure, as the sparks indicate that the wheel is grinding particles off the cutters.

When dressing large wheels, the cutters are apt to become excessively hot. They should be quenched in water and the cutter spindle well lubricated.

Wrigley Emery Wheel Dresser

This dresser will trim off the hardest emery wheels and do it rapidly. The cutters have no teeth to wear out, and cut obliquely or on a slant. Provided with hardened steel bushings at pin bearings, and hardened washers at side bearings. An extra set of cutters is furnished with each dresser.

No. 1. Length, 12 inches. Has 3 cutters, $1\frac{1}{8}$ -inch diameter and is intended for general work. Price each.....\$1.50

Extra cutters:

Per dozen sets of 36 cutters.....\$1.50

Per set of 3 cutters......15

No. 3. Length, 24 inches. Has 6 cutters, $2\frac{1}{8}$ -inch diam. For facing very large wheels. Price each.....\$3.50

Extra cutters:

Per dozen sets of 72 cutters.....\$2.25

Per set of 6 cutters......30

Collmer Emery Wheel Dresser

No. 1 Cutter

No. 2 Cutter

The cutters are made as a unit. They cut fast and as the wear is evenly distributed over the entire face they will outwear four to six sets of Huntington cutters. The extra Collmer Nos. 1 and 2 cutters will fit the regular Huntington handle.

No. 1. Type is used for fine grade wheels and will dress for finishing.

No. 2. Type is for general work, will dress a wheel very rapidly and is especially adapted for fast grinding.

Price of dresser with either No. 1 or No. 2 cutter and one extra set of cutters.....\$1.50

Per dozen.....2.00

Each......20

No. 3 Collmer Emery Wheel Dresser

The cutters of this dresser are exactly like the No. 2 illustrated above, except that diameter is $2\frac{1}{4}$ inches, width $\frac{3}{8}$ -inch, bore $\frac{3}{8}$ -inch. This large size dresser is especially suited for dressing large, coarse wheels.

Price of dresser, with extra set of cutters.....\$2.00

Extra cutters, per set......50

We can furnish emery wheels to meet every purpose. Send us your specifications.

Tool Grinders

"Best Maide" No. 51

This machine finds a wide use among carpenters, cabinet makers and other tool users. It has enclosed concave driving gear, worm gear running in oil, adjustable ball bearings and rigid frame. Casing is made of the best grade of cast iron; malleable iron handle and clamp; frame can be tilted to any position and set at any angle; equipped with a 5x1½-inch double grit wheel with medium body and extra fine face; provided with patent tool rest and chisel

and plane bit guide; weight 12½ pounds.

Price each.....\$6.00

Channon Special

The Channon Special grinders, made in three sizes, are high class machines and intended for long wear and hard usage. The spiral pinion gear is cut from solid steel. The casing is in one piece and oil tight. The No. 7M is intended for use by contractors and general mechanics. No. 7M only has adjustable handle as shown. Can furnish attachment for grinding regular twist drills up to 1¼-inch. These machines are very practical and will grind the correct bevel on drills.

Number.....	7M	6M	5M
Size of grinding wheel.....	7x1½	6x1	5x1
Weight, pounds.....	24	13	9
Price each.....	\$10.00	\$7.50	\$5.00
Twist drill holder, extra.....	1.50		

Challenge

Built especially to meet the demand for a practical machine at a moderate price. This machine, while right in line with all competitive machines, is the lowest priced of its type. The frame is made in two separate halves with one bearing in each half, while other machines make use of one piece castings. This accounts for the much lower price. It has spur cut gears, runs easily and with care will give long and satisfactory service. The gears are fully enclosed and dust-proof. Equipped with sharpening wheel 4½-inch in size and a tool rest. Weight ready for shipment, 5½ pounds. Price each.....\$2.50

Railway Grinder No. 175B

A portable railway grinder that is large and heavy enough to do any work within the range of a hand-power machine. Weight 26 pounds. It is far lighter than a grindstone and can easily be made a part of the regular road equipment of any section or construction gang. Will cut twenty times as fast as the grindstone. There is no water needed and no danger of drawing the temper. The grinding wheel (7-inch diameter, 1¼-inch face) is an aluminum oxide wheel, with its temper and toughness, makes it the most satisfactory abrasive for general use. Furnished with attachments for grinding flat and twist drills, adzes and scythes.

Price per outfit.....\$12.00

Hummer No. 271

Drill Sharpening Attachment

This grinder is simply but strongly made with enclosed gearing, making it absolutely dust-proof and oil retaining. The head can be swiveled to any angle which is very convenient when grinding tools of different shapes and requiring different edges. Equipped with two carbide wheels 6x1½ inches, one medium grit and one coarse. Steel tubing and angle iron frame. Malleable iron parts. Universal tool rest and chisel and plane bit guide. Weight 62 pounds.

Price each.....\$15.00
Drill sharpening attachment.....\$2.00

Water Pot	1.00
Will take stone, maximum size	30" x 4"
Weight, without stone	200 lbs.

Prices do not include stones.

Improved Ball Bearing Family Grindstone

The best family grindstone made. Supplied with a fine specially selected Berea grindstone, turned and rubbed smooth.

Mounted in an extra heavy cast iron trough, on a pressed steel base and fitted with patent hub, a steel shaft and steel ball bearings.

The bearing sleeve is turned out of cold rolled steel shafting and ball case is of heavy pressed steel.

It can be set up in two minutes or a new stone can be applied in no longer time—no cement necessary; anyone can apply the stone.

Japanned red and black. Packed 1/4 dozen in a box. Knocked down.

Bi-Treadle Steel Frame Grindstone

Provided with double treadle, steel seat, and front shield or water guard of 1½ x ½ inch flat steel and steel drip can and holder. Frame is wrought steel, 26 inches long, 26½ inches high and 12½ inches wide over all.

Stone is 19 to 22 inches in diameter and weighs 50 to 60 pounds. Weight of grind stone complete, 100 pounds.

Price Each with Common Bearings \$4.00
Price Each with Ball Bearings 4.35

Empire Grindstone

Frames of seasoned hardwood, braced and bolted. Equipped with regular roller or improved ball bearings, treadle, crank and water bucket holder. Crank can be used to tighten bolts.

No. 1. Diam. Stone 23½ inches. Weight 150 pounds. Price Each with Ball Bearings \$4.50
With Roller Bearings 4.25

No. 2. Diam. Stone 22½ inches. Weight 100 pounds. Price Each with Ball Bearings \$4.15
With Roller Bearings 4.00

No. 3. Diam. Stone 18 inches. Weight 75 pounds. Price Each with Ball Bearings \$3.60
With Roller Bearings 3.35

Always shipped knocked down unless otherwise ordered

Farmers' Special Power Grindstone

The Farmers' Special Wooden Frame Power Grindstone is intended to supply the demand for a high grade power grindstone at a popular price. Frame is well made of selected hardwood. Sides and legs are extra heavy and entire frame is oiled and varnished to prevent decay. The stone is 24 to 26 inches in diameter, 2 to 3 inches thick and of high quality. Fixtures consist of a steel shaft, 6 inch pulley and hardened steel annular ball bearings, also a foot treadle with ball bearings on crank and emergency hand crank.

Frame is shipped knocked down, stone crated. Weight complete about 175 pounds. Price Each \$10.50

Empire Special Grindstone

The Empire Ball Bearing Power Grindstone is especially designed to meet the needs of the farmer or small shop owner, who desire a grindstone to be operated by a gasoline engine. It possesses the necessary strength and staunchness to withstand the strenuous service of every day use, but is light of weight and easily operated. The frame and trough are cast iron, and the trough will not rust out. The fixtures consist of a steel shaft, 12-inch pulley and hardened steel ball bearings.

Stone is a genuine Berea, 24x2 to 3½ in. Weight about 225 pounds. Price Each \$14.00

Keystone Iron Frame Power Grindstone

Trough is cast in one piece, making it water tight, avoiding all joints, which invariably work loose and leak. Legs are cast separate and securely fastened in place with two wrought iron bolts. Adjustable tool rest with drip pan furnished with each frame. Stone and frame shipped separately if desired, and stone will run true when set up. Unless otherwise ordered, however, grindstone is shipped set up ready to use. A 12x4 inch single pulley is furnished with all sizes. In some states tight and loose pulleys are required. Loose pulley is furnished for \$2.50 net extra with any size grindstone.

Unmounted Grindstones

We can furnish grindstones of suitable grits for every variety of grinding. Unless otherwise ordered, however, we furnish a specially selected, medium grit, suitable for all general purposes.

Unmounted grindstones are sold by actual weight (or cut weight), which is the exact scale weight as stone comes from the lathe. Stones weighing 200 pounds or more, are sold by estimated weight called "measured weight" and approximates 150 pounds per cubic foot. Stones 42 inches in diameter and smaller have 2½-inch square hole in center.

Stones up to 60 inches diameter by 8 inches thick are carried in Chicago stock. Larger sizes shipped from quarry.

In ordering, state approximate diameter and width required.

First Aid to the Injured Cabinets

First Aid Cabinet No. 1

Made in two sizes: No. 1—Size of cabinet 12x8x3 1/4 inches, for homes, offices, etc.; No. 2—size of cabinet 15x10x5 inches. Cabinets made of hard wood, oak finished and are nicely varnished.

First Aid Cabinet No. 1

Contains: 1 gauze bandage, 1-inch; 2 gauze bandages, 2-inch; 1 cotton bandage, 2-inch (to bind other dressings); 1 can mustard (specially prepared for emetics); 2 packages absorbent cotton; 1 package court plaster; 1 package styptic gauze (medicated, to stop bleeding); 1 package surgical gauze (plain, for pads and compresses); 1 tourniquet; 3 safety pins; 1 can powdered antiseptic soap; 1 can Reocoso ointment; 1 can Kapsikar Ebrocation (for use as a counter irritant, for sprains, strains, congestion, etc.).
Price, each.....\$5.00

First Aid Cabinet No. 2

Contains: 3 gauze bandages, 1-inch; 12 gauze bandages, 2-inch; 5 cotton bandages, 2-inch (to bind other dressings); 5 packages absorbent cotton; 2 packages court plaster; 2 packages styptic gauze (medicated, to stop bleeding); 3 packages surgical gauze (plain, for pads and compresses); 2 cans Reocoso ointment; 1 bottle arnica, 2-oz.; 1 can Kapsikar Ebrocation (for use as a counter irritant); 1 bottle peroxide hydrogen, 4-ounce; 1 bottle aromatic spirits of ammonia; 2-ounce (stimulant); 1 5-yard spool adhesive tape; 2 cans powdered antiseptic soap; 1 bottle antiseptic tablets; 12 safety pins; 1 pair scissors; 1 pair forceps; a can mustard. Plates to hang cabinet on the wall.
Price, each.....\$12.00

No. 510 Fiber Weld Industrial Goggle

For use in acetylene or arc welding or wherever intense light is encountered.

The frame is of vulcanized fibre and conforms perfectly to the face. It is an absolute non-conductor of heat, which enables the Fiber-Weld goggle to be worn with comfort in foundries, rolling mills, blast furnaces, and wherever molten metal is handled. Equipped with blue, smoked, amber, green, or any ordinary colored lenses desired, but we recommend and furnish, when not otherwise specified, the new Essentialite Lens, which absolutely eliminates all ultra-violet rays. This lens is made of a new glass that positively wards off all harmful light rays and insures perfect vision.

Price, each.....\$2.50

No. 128 Safety Spectacles

This industrial Eye Protector has a German silver frame with wire screens on the sides. Can be washed or sterilized in hot water or live steam, and will not rust. Has adjustable nose bridge that will fit any face. The lenses are large, of special tempered glass, fitted into special rims and can be easily removed by a slight pressure on the inside when pitted or broken.

Price, each.....\$2.50

Rubber Respirator and Goggles

The respirator is designed for the use of persons who are exposed to the danger of inhaling poisonous dust fumes or gases.

A fine damp sponge is the best known filter for separating the impurities from the air and this in connection with the automatic valve insures perfect protection and ventilation. Sponge can be removed, cleaned and replaced again in one minute.

The automatic valve is so simple that it cannot get out of order and will always act, no difference what position the wearer assumes at his work. Made of pure white rubber, and is easily kept clean. Bends to fit any face perfectly.

The goggles are made of a simple piece of pure rubber. The lenses are clear glass and can be removed, cleaned and replaced in a moment. Mica lenses can also be furnished where there is danger from flying chips. The cushion is a curved flange extending downwardly and outwardly from the lens portion. It has no filthy pads and is easily kept clean. Used largely by men in foundries, fire departments, chemical works, men operating grinders, polishers, etc., and autoists. Either air tight or ventilated, as desired. Should be air tight for use in irritating gases, lime, etc., but ventilated when used in most other places.

Respirator, price per dozen.....\$22.00

Price, each.....2.00

Goggles, price each.....1.80

New Jumbo Nail Puller

Shank and claw forged from high-grade tool steel. Has hand guard and will not turn in handle. Tested and fully warranted. Size, 18 inches.

Price each	\$2.00
------------	--------

Victor Pry Bar and Nail Puller

One of the simplest and handiest tools made. Electricians, plumbers and carpenters will find it unequalled for prying or cutting into floors, ceilings, walls, etc. In the packing or receiving room it will be found very effective for opening boxes. Will draw a nail as high as a man can reach and will not injure the lumber. It has a cold chisel cutting edge that will cut a nail if it can't pull it.

Steel Letters and Figures

Our hand cut letters and figures are made of the best grade of steel possible to use for this purpose. They are accurately made entirely by hand and carefully tempered. We recommend them as the best for constant use and where satisfactory work is required. Will stamp all metals except hardened and tempered steel.

The machine cut letters and figures are made from high grade cold drawn steel and are especially adapted for stamping soft steel and brass, aluminum, wood, leather, etc. Each set is produced in a neat wooden box. Unless otherwise ordered we will furnish the hand cut.

Steel Stamps

Hand made of the best tool steel for marking tools, wood, iron, steel and metals of all kinds. Always state for what purpose stamps are to be used. Hammer stamps with hole for handle, 50c lb. net extra for steel forgings. Stamps with letters larger than 1/4-inch 50c lb. net extra for steel forgings. 25 per cent extra for stamps of two or more lines or cut on curve. Initial stamps 1/2 to 1/4-inch 20c net per letter. All other sizes of initial stamps, 25 per cent additional. As all forgings are made by hand it is impossible for us to estimate the weight.

Size, Inches	Per Letter	Size, Inches	Per Letter	Size, Inches	Per Letter

3/8	.40	7/16	1.10		

Steel Log Marking Stamps

Made of the best steel obtainable and fully warranted. Intended for marking the ends of logs. When stamps are for marking the sides of logs mention should be made of the fact, as stamps for that purpose are made with sharp face letters. Stars are same price as letters. Borders \$1.00 and up net extra; 50c lb. net extra for steel forgings. On initial stamps the period is half the price of a letter. It is impossible for us to estimate the weight of forgings as they are made by hand and vary.

Pattern Letters

A—Roman. A popular style. Has flat face.
P—Sharp Face Gothic. Draws easily from sand.
D—Round Face Gothic. Heavier than Sharp Gothic.
 Convex sides.
H—Hair Line. A very light Gothic style.

IMPORTANT—Pattern Letters are measured by the height of face and not height over all. For example, the size of the letter P shown above is $\frac{3}{8}$ -inch, of the letter H $\frac{1}{2}$ -inch. Minimum charge, 20c net.

N—Antique Pointed or Fancy. Ornamental, flat top.

4—Reversed Gothic Branding. Very deep.

L—Reversed Gothic Branding. Not as deep as Gothic Branding Style 4.

Perfect Leather Fillet

For Pattern Makers, Founders and Machinists

Perfect Leather Fillet can be easily and quickly applied on single or compound curves, and on straight work, with a single operation; tacking, clamping and use of mitre box being dispensed with.

Is not affected by heat, cold or moisture, and is light, neat and durable.

Cut with curved sides, geometrically correct, forming a perfect arc of a circle when in place.

Packed 100 feet in a bundle.

Brass Dowel Pins

Made of brass and threaded. They may be driven into place and removed any time by unscrewing. Being threaded, they can be removed from pattern for alteration or repair without injury. They do not swell like wood dowel pins and last much longer. They are made so that upper half of pattern frees itself easily. They produce good, smooth joints on castings. Manufacturers of fine machine tools use them exclusively.

Gyratory Foundry Riddle

It has the true gyratory sifting motion which gives it double the sifting capacity of any other foundry riddle of same size.

It is an all metal machine. The motor is fully enclosed and direct connected. All bearings are dust proof.

It is of rigid construction, compact and light in weight.

The sieve is 20 inches in diameter and is held in place by a special clamping device which enables the operator to remove, dump and replace it.

The motor is 1-6 horse power, making cost of current inappreciable.

It weighs only 90 pounds and is easily portable by one man. It can be suspended from any hook or support. Screw the plug into any lamp socket and it is ready for work wherever wanted.

It gyrates with a steady pull in one direction, no sudden stops and starts, no jars or jerks.

It will sift sand faster than one man can shovel and faster than ten men can sift with hand riddles.

There are no legs. A wheelbarrow can be run right under it, or it can be suspended over and sift right into the flask. Placed between two moulding machines it will supply both with plenty of sand.

Supplied with motor for 110 or 220 volt direct current, or 110 or 220 volt 25, 30 or 60 cycle alternating current.

Price for direct current \$134.00

Price for alternating current 147.00

Foundry Riddles

Plain reinforced hardwood frame; two heavy wire bottom braces. Diameter, 18 inches; depth, 4 1/4 inches. Weight about 25 pounds per dozen. By "mesh" is meant the number of openings to the lineal inch. For example, 1 square inch of 4-mesh wire cloth contains 16 openings.

Steel and galvanized iron wire bottom riddles are furnished in 2, 4, 6, 8 and 10 mesh.

Brass wire bottom riddles are furnished in 2, 4, 6, 8, 10, 12, 14, 16, 18 and 20 mesh.

Chicago Pneumatic Sand Sifter
No. 1—For Foundries

Light weight and superior workmanship and construction. Weight 125 pounds.

Price \$75.00

No. 01 Machinists' Tool Chest

Made of chestnut with chestnut moldings and panels. It is fitted with a brass cylinder lock, drop handles, and a patent locking device which locks the drawers by the closing of the lid. Chest weighs about 30 pounds. Outside dimensions 20 7/8 inches long, 13 1/4 inches wide, 10 1/2 inches high. Inside dimensions are:

Receptacle under lid	18	x	10 1/4	x	3 1/2	in. deep
First drawer	16 1/2	x	9 3/4	x	1 1/2	in. deep
Second drawer	16 1/2	x	9 3/4	x	2 1/2	in. deep
Price each						\$7.25

No. 75 Machinists' Tool Chest

This case can be conveniently carried from place to place. Made of chestnut nicely finished. Has four drawers 17 1/2 x 6 1/2 inches wide, three of them 1 inch deep and one 3 1/4 inches deep. Fitted with brass Yale patent lock, leather handle, metal corners. Lid locks at bottom and when open can be slid back over the drawers like the lid of a sectional bookcase. Outside dimensions 19 1/4 x 9 x 11 inches high. Weight about 14 pounds.

Price each.....\$9.50

Carpenter's New Hand Tool Case

Made of well seasoned stock, nicely finished. Opens at the side as shown in illustration. Provided with brass lock, metal clasps and corners, saw rack for holding four saws, and partitioned tray for bits, chisels and small tools. Approximate weight 17 lbs.

No. 3. Size 26x7x12 inches.	Price each.....	\$7.25
No. 11. Size 32x7x12 inches.	Price each.....	7.50

Empty Carpenter's Tool Chests

Strongly made of hardwood, filled and varnished.

Each chest has two trays and a lock and key, a handsomely paneled lid and heavy band moldings. Ends are fitted with drop handles.

No. 260. Size 28x15x14 inches, weight 65 pounds crated.

Price each.....\$10.00

No. 260 1/2. Size 31x15x14, will take a 20-inch hand saw. Weight 70 lbs.

Price each.....\$12.50

No. 270. Size, 33x18x16 inches. Will take 28-inch saw. Weight about 100 pounds.

Price each.....\$15.00

No. 515 Machinists' Steel Tool Case

Finished with three coats black baked enamel. Brass Corbin two key notch lock. Genuine cowhide handles with steel core. Case will not swell, warp, crack, split, or go to pieces. Front slides under bottom drawer. Dimensions, 15 1/2 inches long by 7 inches wide by 12 1/2 inches high.

Price each.....\$14.00

Kennedy Steel Kits

For electrical workers, mechanics, railroad men, construction men, repair men, installation men and contractors. Made of prepared steel but are no heavier than other bags and tool kits. Built to stand the wear and tear of hard usage. Re-enforced throughout, fitted with brass side catches, strong two-lumber Yale locks, steel leather covered handles and

riveted so that they cannot pull out. Protected by solid brass corner irons. Finished in three coats baked enamel of brown or black, they present an appearance neat and attractive and look like leather traveling bags. Material, special construction and overlapping features make these kits wear-proof, waterproof, and weather proof. They are thief-proof because they can be locked and chained and cannot be cut open. Price, without tray, deduct \$0.35.

Channon Steel Barrels

The bottoms of these barrels are cold drawn from one piece of steel. They lap the body and are closely riveted with machine driven rivets. We can furnish any size or style, but for general use we recommend our number 608 as illustrated.

Size, 18-inch diameter, 30-inch height. Sides of No. 16 gauge and bottom of No. 14 gauge sheet steel. Weight, approximately 45 pounds.

Price each.....\$9.25

Steel Tool Boxes

Light weight but strong. Cannot be pried open. Body formed from one piece of 18 gauge steel. Ends double folded. Top edge finished by forming one-half inch over lap. Cover is stamped from one piece 18 gauge steel and formed with one-half inch tight fitting flange. Handle lies flat in pocket. Hinges riveted on inside of cover for security and adds much to the appearance of the box. No projections or sharp corners to catch and scratch. Tray is formed in one piece and is 1 1/2-inch deep.

Yale Seamless Steel Padlock

No. 563. 1½-inch seamless steel padlock. Case steel, dull black finished shackle, steel, nickel-plated. Can be furnished with 48 changes. Three lever tumblers. Two nickel-plated flat keys with each lock.

Price per dozen	\$13.05
Price each	1.30

Yale Automobile or Motorcycle Padlocks

No. 2565. 2-inch seamless steel padlock, same as above, except with a shackle 6 inches long. This lock provides secure method of leaving a machine at the curb without fear of it being stolen or used without the owner's consent.

Price per dozen	\$19.85
Price each	2.00

Bronze Railway Switch Padlocks

For use on railway switches or other places where a strong, heavy brass lock is required. Made of cast brass throughout. Will not corrode, rust or stick as all working parts are made of brass. Key-hole is covered by an automatic drop, preventing rain or dirt from getting into the mechanism. There are 12 changes of tumblers to the dozen. Two keys and 9 inches of chain furnished regularly with each lock. When locks are desired for railway switches 15 inches of chain are usually required.

Locks are furnished rough or ground finish.

No. 5. Size 2-inch, with 9 inches of chain.	
Rough finish, per dozen	\$12.00
Price each	1.20
Ground finish, per dozen	13.00

Price per dozen	\$3.35
Price each	.34

No. 671J½. Same as above, except with 9 inches chain.

Price per dozen	\$3.75
Price each	.38

Padlocks

Security Combination Padlock

Has three number combination that affords more than 51,000 combinations, giving utmost security. Manufactured from only five pieces of solid milled brass.

No tumblers, rivets, springs, pins nor bolts, in fact, nothing to get out of order.

Absolutely non-rustable and non-freezable. Every lock is so carefully adjusted that no moisture can get into it. It is filled with an especially compounded lubricating fluid which will not freeze in winter nor rust in summer.

No. F.—For general purposes. Solid brass lock with steel case casing 1 3/4 inches diameter, 5/8-inch hasp. Inside measurements of hasp, 3/4 inch wide, 7/8 inch long. Weight, 5 1/2 ounces.

Price each \$1.45

No. E.—Dimensions and cut same as No. F, only made with steel case and hasp; working parts made of brass. Has brightly finished brass combination knob. Weight, 5 ounces.

Price each \$1.10

No. EE.—Automobile lock. Same as No. E, only has a 2-inch hasp. Weight, 6 ounces.

Price each \$1.25

No. EEE.—Automobile lock. Same as No. E, only has a 3-inch hasp. Weight, 6 1/2 ounces.

Price each \$1.25

No. AAS.—Motorcycle lock. All steel with brass working parts. Casing 1 3/4 inches diameter, 5/8-inch copperized steel bent hasp. Inside measurements of hasp, 1 1/2 inches wide, 6 1/2 inches long. Weight, 10 ounces.

Price each \$1.25

Mastodon Padlock

Steel, self-locking spring shackle, 8 secure levers and 2 double-bitted nickel-plated keys. Made regularly with 12 changes of keys. Also made with 780 changes, all different, to one master key, at an extra charge. Casing, 2 1/2-inch.

The Channon Round Track Door Hangers

No. 4 Round Track Hanger and Track

No. 14 Hanger

It is made of the best refined malleable iron. The frame is in one solid piece, positively rigid and durable. The safety guard prevents derailment and insures the hanger remaining in position at all times.

The wheels are $3\frac{1}{2}$ -inch diameter, machine turned on tread, causing the hanger to run smoothly and are equipped with roller bearings.

The Track is a heavy steel tube with $\frac{3}{8}$ -inch slot in back for placing track brackets. The hollow tube with brackets properly spaced assures ample carrying capacity. Made in 6, 8 and 10-foot lengths. Brackets are of malleable iron and fit inside of track tightly. Hangers are packed one pair in carton with two end brackets and bolts for doors 2 inches thick and under.

No.	Description	Shipping Weight	List Price
14	Hanger.....	8 lbs. per pair.....	\$1.60 per pair
14	Track, brackets every two feet.....	115 lbs. per 100 feet.....	.14 per foot
14X	Track—without brackets.....	97 lbs. per 100 feet.....	.12 per foot
14C	Extra center brackets for track.....	40 lbs. per 100 feet.....	.06 each

Nos. 3 and 6 Warehouse Door Hangers and Track are the strongest and most durable made and are recommended for heavy doors, or doors subjected to rougher treatment than the No. 14 hanger and track are intended to carry. Hanger frames, lower wheels and track brackets are malleable iron. The hanger wheels are $4\frac{1}{4}$ inches in diameter and have steel roller bearings packed in graphite lubricant. The lower wheel prevents derailing and binding. The No. 6 hanger has a $2\frac{1}{4}$ -inch vertical and $1\frac{1}{2}$ -inch horizontal adjustment. The track is of the same type as for No. 14 hanger, except that it is much larger in diameter and of much heavier steel. Furnished in 6, 8 and 10-foot lengths. Brackets are also larger and heavier. Two end brackets and bolts for hangers furnished with each pair of hangers.

No. 3 hangers, non-adjustable, for doors $1\frac{1}{2}$ inches to $2\frac{1}{2}$ inches thick. Weight 20 pounds per pair. List price per pair.....\$4.20

No. 6 hangers, adjustable, for doors $1\frac{1}{2}$ inches to $3\frac{1}{2}$ inches thick. Weight 30 pounds. List price per pair.....\$6.00

No. 3 track with brackets every two feet, for use with both No. 3 and No. 6 hangers, $1\frac{1}{2}$ inch diameter. Weight 225 pounds per 100 feet. List price per foot.....\$0.30

End and center brackets for Nos. 3 and 6 track, end 162, center 149 pounds per 100. Each \$0.20

Above equipment for parallel doors on application.

No. 6 Adjustable Hanger

Right Angle Door Hanger No. 235

Trolley Right Angle Door Hangers

Made in Two Sizes and Five Styles

To use where, for lack of room, right angle doors are necessary. As shown above, track on side wall is set over track above the opening. This requires that the outer end hanger have an extra long pendant. Track over opening must be slotted part way through at point where pendant of rear hanger on door comes, when door is in closed position. Blue print showing erection details furnished with each order.

Directions for ordering: State size of opening; distance between jamb and side wall; if doors are single or double; if double, do they slide right and left, or both one way; distance door laps on jamb; always send sketch of door plan with above dimensions inserted.

Prices quoted upon application.

Nos. 67COD and 67EOD parallel center and end overhead brackets for use with 67X track and 68 hangers. List price, each.....

No. 60COD parallel overhead center bracket same as above.

Nos. 60ED and 67ED same as CD and Nos. 60EOD and 67EOD same as COD, excepting they are end brackets and fitted with stop plates to prevent track from moving endwise.

No. 67CD
No. 67EDNo. 67COD
No. 67EOD

Fire Door Fixtures

Approved by National Board of Fire Underwriters

Showing manner of applying and arrangement of cord and fusible links. One link is constantly in opening exposed to both sides of doorway, the other above opening near ceiling. Fusing of either link releases weights and allows door to close. When doors are on both sides of wall, cord passes through wall and forms a similar arrangement, thus exposing four fusible links, the breaking of any one releasing weights which closes both doors. Special arrangement of cords to comply with insurance or other boards can be made.

In ordering state width of opening. Door must lap four inches on each side of opening.

Set includes hangers, track and fixtures complete with screws and bolts for attaching parts to door (excepting wall bolts) on one side of wall only. If doors are used on both sides, double sets will be required.

Prices quoted upon application.

Hardware for Garage Doors

Door trimmed with Set 1776

Garage Door Set No. 1776

For Light Garage Doors

Comprises three pair No. 960 10-inch reversed pad extra heavy T hinges. One No. 1055 6-inch chain bolt with staples. One No. 1056 6-inch foot bolt including floor plate. One No. 1260 size 4 heavy thumb latch. One No. 1257 No. 4 heavy door handle.

Dead Black Finish Per Set \$4.00

Inside view of doors trimmed with Set 1777

For completely equipping medium or lighter weight Garage Doors

Garage Door Set No. 1777

Comprises two pair No. 960 16-inch reversed pad extra heavy T hinges. One pair No. 960, 12-inch reversed pad extra heavy T hinges. One pair No. 1774 garage door holders. One No. 1055 6-inch chain bolt with staples. One No. 1056 6-inch foot bolt including floor plate. One No. 1260 size 4 heavy thumb latch. One No. 1257 size 4 heavy door handle.

Dead Black Finish Per Set \$9.25

Door Latch

Wrought Steel

No. 1252

No. 1252 Extra Heavy Door Latch. These latches will not break and are consequently greatly superior to the old style cast iron latches. They have combination screw holes to permit the use of bolts and nuts and are countersunk for wood screws. Packed one in a box with screws. Handle is 10½ inches long.

Per dozen.....\$17.50

The escutcheon plate shown fits over the thumb latch on the outside of the door covering the hole and giving the latch a finished appearance.

No. 1257, Size 4 Heavy Door Handle or Pull for use on inside opposite door.
Per dozen.....\$33.00

No. 1265 Extra Heavy Door Handle matches No. 1252.
Per dozen.....\$5.00

Spring Cotters

All Measurements Made Under the Eye

Our spring cotters are perfectly made and will run at least 10% better than any others because of superior heading and pointing and the fact that they are hand inspected and all culls, dirt and imperfect cotters thrown out.

H. Channon Company Chicago

Assorted Spring Cotters

For the convenience of our customers, we pack spring cotters in four special assortments as listed below.

Assortments Nos. 1, 2 and 3 are especially adapted for agricultural trade and Assortment No. 5 for automobile trade.

Each assortment is packed in a neat cardboard box, 12 boxes to the carton.

Price per Box

Asst. No.	Contains	Price	Asst. No.	Contains	Price
1	100 Cotters—10 each of the following: $\frac{3}{8} \times 1 \frac{1}{4}$ — $\frac{3}{8} \times 1 \frac{1}{2}$ $\frac{3}{8} \times 1 \frac{3}{4}$ — $\frac{3}{8} \times 1 \frac{1}{2}$ $\frac{3}{8} \times 1 \frac{1}{2}$ — $\frac{3}{8} \times 2$ $\frac{3}{8} \times 2$ — $\frac{3}{8} \times 2 \frac{1}{2}$	\$4.00	3	25 Cotters—3 each of the following: $\frac{3}{8} \times \frac{3}{4}$ — $\frac{3}{8} \times 1$ — $\frac{3}{8} \times 1 \frac{1}{4}$ $\frac{3}{8} \times 1 \frac{1}{4}$ — $\frac{3}{8} \times 2$ And 2 each: $\frac{3}{8} \times 1 \frac{1}{2}$ — $\frac{3}{8} \times 1 \frac{3}{4}$ — $\frac{3}{8} \times 2$ — $\frac{3}{8} \times 2 \frac{1}{2}$	\$1.60
2	50 Cotters—5 each of the following: $\frac{3}{8} \times 1 \frac{1}{4}$ — $\frac{3}{8} \times 1 \frac{1}{2}$ — $\frac{3}{8} \times 1 \frac{3}{4}$ — $\frac{3}{8} \times 2$ $\frac{3}{8} \times 2$ — $\frac{3}{8} \times 2 \frac{1}{2}$	\$2.25	5	100 Cotters: 10 each— $\frac{3}{8} \times \frac{3}{4}$ — $\frac{3}{8} \times 1$ — $\frac{3}{8} \times 1 \frac{1}{4}$ 20 each— $\frac{3}{8} \times 1 \frac{1}{4}$ — $\frac{3}{8} \times 1 \frac{1}{2}$ 15 each— $\frac{3}{8} \times \frac{3}{4}$ — $\frac{3}{8} \times 1 \frac{1}{4}$ 10 each— $\frac{3}{8} \times \frac{3}{4}$ — $\frac{3}{8} \times 1 \frac{1}{4}$	\$3.40

Furnished in bulk.

Flat Riveted Keys

Used largely by railroads and car builders. Made of two pieces of flat steel (8, 10, 12, 14, 16 and 18-gauge) riveted together. Sixty-five different sizes and patterns. Prices and special catalogue upon application.

In ordering, give dimensions as indicated in sketch below and total thickness of two pieces.

Gib Head Square Machine Keys

Made of high grade steel, finished and ground accurately to size. Star* indicates stock sizes. Machine keys of special taper and dimensions furnished, with or without gib head. Regular taper $\frac{1}{8}$ -inch to the foot.

Taper Pin Assortment

- No. 1. Assortment contains 50 taper pins, Nos. 0 to 4, lengths $\frac{3}{4}$ to $1\frac{3}{4}$ inches. Price.....\$1.50
 No. 2. Assortment contains 100 taper pins, Nos. 0 to 6, lengths up to 3 inches. Price.....4.50

Hammer handles are priced on another page—see index.

Slotted Rivets

Copper Plated

No. 151

No. 151 Slotted Clinch Rivets. Oval Head, $\frac{1}{8}$ -inch Diameter, Body $\frac{10}{64}$ -inch Diameter.

Length, inch.....	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$
Per carton of 12 boxes of 50 each.....	\$0.43	\$0.45	\$0.48	\$0.52	\$0.52
Per box of 1000.....	.77	.77	.77	.87	.87
Length, inch.....	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$
Per carton of 12 boxes of 50 each.....	\$0.52	\$0.57	\$0.57		
Per box of 1000.....	.87	.97	.97	\$1.07	\$1.07

In assorted lengths from $\frac{1}{4}$ to $\frac{1}{2}$ -inch:

1 carton (12 boxes) 50 rivets, each.....	\$0.43
1 carton (12 boxes) 100 rivets, each.....	.60

No. 208

No. 208 Slotted Clinch Rivets, Oval Head, $\frac{3}{8}$ -inch Diameter, Body $\frac{1}{4}$ -inch Diameter

In assorted lengths from $\frac{1}{2}$ to $\frac{3}{4}$ -inch.

1 carton (12 boxes) 100 rivets, each.....	\$2.25
-------------------------------------------	--------

No. 208

Copper Plated

No. 213

No. 213

Slotted clinch rivets. Oval head, $\frac{1}{4}$ -inch diameter, body $\frac{1}{4}$ -inch diameter. Packed 1000 of any one length to the box.

Lengths, inch.....	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$
Price per 1000.....	\$1.62	\$1.62	\$1.87	\$1.87	\$2.12	\$2.12

For list price of steel set screws, add 25 per cent to the above.

Safety Hollow Set Screws

On revolving shafting, the use of ordinary set screws is not only dangerous, but criminal, unless protectors or hubs are provided, that the head may not catch on workmen's clothing, endangering their lives and limbs.

By using safety hollow set screws, these disadvantages are entirely overcome. One length will answer for every size hole. As shown in the accompanying illustration, the wrench fits into the recess as far as necessary to tighten the screw. Deep holes need only be threaded at the bottom and as far up as the diameter of the hollow set screw, the balance of the hole can be counterbored. A further advantage is that no shoulder is needed on collars and no countersinking is necessary, effecting a saving of material and labor. The recess may be filled with wax to prevent rust which adapts them for use on propeller shafting.

All set screws furnished in U. S. S. thread unless otherwise ordered. Can also be supplied in V. or A. L. A. M. thread.

Allen Safety Set Screws

The Allen safety set screw is conceded to be the best set screw of its type made. The whole is not broached, leaving a false bottom as in most socket screws. It is drilled and the hexagon formed by a secret process which makes it more than 30 per cent stronger.

For those desiring the best, or where safety features are essential, we recommend the Allen set screw.

Tap end of stud is threaded large to make a steam tight fit.

Less quantity 20% additional.

Length of threads on regular studs. Other threadings are special and made to order, only.

"N" is nut end. "T" is tap end.

Standard Kegs

Paper Package 1/2 x 8 and smaller

Standard Cases

The square head and nut "machine" bolt is by far the most popular style of bolt on the market and this style is always sent where "bolts" only are specified.

We carry an enormous stock at all times (up into the millions) from 1/4 x 3/4 to 1 x 30. We carry 1/4-inch variations in lengths 4 inches and shorter, 1/2-inch variations in lengths 4 to 10-inch, 1-inch variations to 20-inch and 2-inch variations to 30-inch.

For our contracting trade we carry large diameter bolts in long lengths—these sizes are seldom if ever obtainable from hardware or supply house stocks.

As a great many bolt users usually specify so many "cases" or "kegs" of machine bolts of a size we give below the approximate numbers contained in these packages.

Standard Machine Bolt Information

Diameter, Inches	1/4	5/16	3/8	7/16	1/2	5/8	3/4	7/8

We aim to carry bolts by 1/4-inch variations in length to 4 inches, by 1/2-inch to 10 inches, by 1 inch to 20 inches and by 2-inch variations to 30 inches.

We do not carry 1 1/4 and 1 1/2-inch bolts but can supply them usually in 3 to 4 yards. Larger and specially long bolts, or rods quoted upon request.

We reserve the right to ship 1/2-inch where 1/4-inch variations in lengths are specified; for instance, 3/4x1 1/4 we send 3/4x1 1/2 should we be out of 3/4x1 1/4.

All intermediate lengths charged for at next longer length as per list above.

These list prices apply only on lots of not less than 100 bolts of a size, and for bolts with square heads and hot pressed square nuts.

Discount changes on 3/4x4 smaller and shorter, and applies to full standard packages only. Broken packages charged at extra price depending upon sizes and quantities.

All special bolts charged for at special lot prices, depending upon size, size and quantity which include charge for changing and setting up bolt machine.

Standard Extras: For mill orders only: Bolts with hexagonal heads or hexagonal nuts 10% extra. We do not carry bolts with hexagonal heads but can supply hexagonal nuts from stock separately at additional cost.

If both hexagonal heads and hexagonal nuts, 20% extra, depending, however, upon the size of the order.

Bolts fitted with U. S. S. Square Nuts add 5%, with U. S. S. Hexagon Nuts, 15%.

Extra long threads, see opposite page.

"V" or Whitworth Threads to special order.

Standard Carriage Bolts

Oval Heads with short full Squares under Heads. Square Nuts, Finished Points, U. S. S. Threads, R. H.

Measured from Under Head to Point

Price Per Hundred

(Std. List Nov. 1, 1912)

[illegible]

Carriage bolts are not anywhere near as popular as Machine bolts and we do not carry as large a stock—used for woodwork—the square under the head holds bolt from turning when tightening up.

We do not carry $\frac{3}{4}$ -inch diameter bolts in stock but can supply in 3 or 4 days. We carry very few $\frac{5}{8}$ and $\frac{1}{2}$ bolts in stock as these are not popular sizes, $\frac{1}{2}$ size at same price as $\frac{3}{8}$, to order only.

Where $\frac{1}{4}$ -inch variations are specified we reserve the right to ship next $\frac{1}{4}$ -inch longer.

Intermediate lengths charged for at next longer length price.

Extras—for Mill orders only:

When fitted with hexagon Nuts, add 15%.

If Hexagon nuts are desired from stock we will furnish regular bolts with square nuts and charge Hexagon Nuts separately at additional cost.

List above applies for 100 of a size only.

Extra for longer threads same as for Machine bolts.

Hot Pressed Square Nuts regularly furnished.

Packages about same as for Machine belts.
Discount changes at 3608 smaller and

Discount changes at $\frac{1}{4}\times 6$ smaller and shorter, larger and longer bolts at smaller discount.

Special Nuts supplied at prices depending upon quality.

Plow Bolts

No. 2 Round Countersunk Heads—Forged Square Nuts—Finished Points

This is the only large diameter bolt with countersunk head carried in stock. There are many different styles of plow Bolt Heads but these can be furnished only for Mill shipment in good quantities. L. H. Threads 10% extra.

Steel Boiler Bolts

Also called Fitting Up Bolts, Erecting Bolts, Service Bolts and Setting Up Bolts.

These bolts have half cone points, swelled necks, coarse quick threads and recessed square nuts.

Made of soft steel with quite coarse (special) threads, so that the nuts can be run on and off quickly by hand. The nut is recessed—a great convenience adding to the speed in handling.

These bolts however, have special threads and cost considerably more than machine bolts used for the same purpose.

Usually sold by the pound or by the lot, depending upon quantity. We can furnish dock rods, foundation bolts, etc., up to 4 inches in diameter. Prices upon request. To arrive at weight of upset, add 5 to 6 inches of bar for two upsets.

Turnbuckle Rods

We can supply promptly rods with turnbuckles having plain or upset ends or with eye ends, straight or bent. Send specifications for estimates.

Pipe, Tank and Silo Bands

Any diameter, length or style. Prices quoted upon receipt of specifications.

Drift Bolts

$\frac{1}{4}$ inch not carried in stock but can supply promptly. We also carry $\frac{1}{4}$ inch from 1 to 3 inches in length, price same as $\frac{1}{2}$ inch.

One point is practically obsolete. We supply for factory shipment only at extra price.

Hexagon heads to order only for mill shipment at 10 per cent extra. Less than 100 lots 10 per cent extra.

Skein screws sold at same list.

Paper packages $\frac{1}{2}$ and smaller, $\frac{1}{2}$ and $\frac{3}{8}$ in packages of 50; $\frac{3}{8}$ inch, packages of 25.

"Gripwell" Lag Screw Expansion Shields

Malleable Iron—Perfect Threads—Full Expansion With Least Effort

The Gripwell shield is the only one of its kind with guaranteed with the least effort. Comparative tests will carry conviction.

The thread is the one most important feature of a lag screw shield. In the Gripwell the thread is not only distinctly different and better, but every thread is guaranteed to be perfect.

The expansion is produced by the stock of the screw bearing on the smooth tops of the high and heavy threads.

Has tapered fins to prevent shield turning with lag screw. Lugs to clamp shield together at forward end.

perfect threads, producing full expansion under hardest service

Oval form to drive easier and cone to fill front of hole.

Threads of correct mechanical height and spacing for either cut or rolled threads.

Open throat of depth necessary to attach thin material without specially cut screws with shield flush with face of wall.

Screw starts in first thread without expansion, making engagement easier.

Outside diameter of shield, inches	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{5}{8}$	$\frac{3}{4}$
Size of drill required, inches	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{5}{8}$	$\frac{3}{4}$

Specify L for long and S for short pattern. Length required is found by adding thickness of material to be attached to length of shield.

"Gripwell" Duplex Machine Bolt Expansion Cases

Expansion occurs at inner end—the proper place. This is a two part, but single unit, shield or case without prings, wires or lugs. The two parts will not separate and get lost. Positively self aligning. See sectional cut, showing tube on head end of oval nut fitting into tube at inner end of shield or case. Nut is always held in positive alignment to engage thread of bolt—a most important feature.

Price of Cases Only, Without Bolts

"Gripwell" Duplex Expansion Cases For Machine Screws, Stove Bolts, Etc.

These expansion cases are exactly the same as those shown above for machine bolts, only these can be used with machine screws, stove bolts and cap screws. We particularly want to call your attention to the 3/4-inch size which is combination tapped and will fit either 4-inch 20-thread cap screw, 1/4-inch 18-thread stove bolt or 14-20-thread machine screw, 1/4-inch 20-thread carriage or machine bolt.

Diam. Screw	Thread	Outside Diam. Case	Length Case	Price per 100
3/8	32	5/8	5/8	\$4.40
1/2	24	3/4	7/8	5.00
3/4	18	1	1	5.60
1		1 1/8	1 1/8	6.25

Paine Toggles

The advantage of the Paine toggle bolt is that when closed it is only about 1 inch in length of head, and will work in hollow tile with hollow of only 1 1/8 inches, while other toggles require a hollow

as great as the spread of head—about 2 inches.

This bolt folds, to insert in hole, and when the head has passed the inside of hole, the spring instantly throws the two halves of head out to a spread of 2 inches. Packed 5 in a box.

Size	Price per 100	Size	Price per 100
1/4 x 3	\$5.85	1/4 x 3	\$7.85
1/4 x 4	7.15	1/4 x 4	8.15
1/4 x 5	7.50	1/4 x 5	8.55

"Gripwell" Screw Anchors

(Expansion Shields for Wood Screws)

Composition Metal—One Piece

Die cast from a special ductile composition metal. Holds more than the wood screw.

Drives in hole—flush with face of wall.

The oval form wedges anchor tightly in hole and prevents it from rotating with screw.

Requires smaller hole than other makes.

Open throat eliminates expansion at face of wall and possibility of cracking tile or marble.

Price per Hundred (Without Screws)

Diam. of Screw	Length of Anchor	Screw Numbers	Outside Diam. of Anchor, also Diam. of Drill Required	Price per 100
1/8 x 5/8	5-6-7-8	1/8	1/8	\$4.40
1/8 x 3/4	5-6-7-8	1/8	1/8	4.40
3/8 x 5/8	9-10-11	3/8	3/8	5.00
3/8 x 3/4	9-10-11	3/8	3/8	5.00
3/8 x 1 1/2	9-10-11	3/8	3/8	6.25
1/2 x 5/8	12-13-14	1/2	1/2	5.60
1/2 x 3/4	12-13-14	1/2	1/2	5.60
1/2 x 1	12-13-14	1/2	1/2	6.75
3/4 x 1 1/2	15-16-17-18	3/4	3/4	6.25
3/4 x 1	15-16-17-18	3/4	3/4	7.50

Order as 1/4x1—1/4 is diameter of screw and 1 inch is length of anchor.

We solicit specification and inquiries from large electrical contractors and other concerns who use expansion and toggle-bolts extensively.

With our experience we are prepared to furnish materials adapted to each distinct purpose.

You will find our stock large and prices interesting.

H.Channon Company Chicago

Van Quadruplex Expansion Units

Cross Section

Normal Position

Expanded

For Stove Bolts—Machine Screws and Machine Bolts

Requires less drilling because of accuracy of construction, design and size. Expansion is positive. When head of bolt bears on the work, cone-expander rides up on threads causing expansion—four ways. The cone-expander keeps it expanded, therefore cannot drop out of hole when bolt is removed. Expansion always takes place at bottom—no surplus depth of hole required. Four-way expansion gives greater contact with hole—seats the unit quickly and aligns it properly. Can be used in hollow or solid walls, tile or gypsum blocks. No force required to install. Can't turn in the hole. High safety factor—maximum holding power.

Prices Van Quadruplex Expansion Units Only

Size of Screw or Bolt, Inch	Length Unit, Inches	Size Drill to Use, Inch	For Use With	Threads per Inch	Standard Package	Price per 100
$\frac{3}{8}$	$\frac{5}{8}$	$\frac{5}{16}$	Machine screws	32	100	\$ 2.50
$\frac{3}{8}$	$\frac{7}{8}$	$\frac{5}{16}$	Machine screws	24	50	2.50
$\frac{1}{2}$	1	$\frac{7}{16}$	Stove bolts	18	50	3.50
$\frac{5}{8}$	$1\frac{1}{4}$	$\frac{9}{16}$	Stove bolts	18	25	5.00
$\frac{3}{4}$	$1\frac{1}{2}$	$\frac{5}{8}$	Machine bolts	16	25	6.50
$\frac{3}{4}$	2	$\frac{3}{4}$	Machine bolts	13	12	9.00
$\frac{3}{4}$	$2\frac{1}{2}$	$\frac{7}{8}$	Machine bolts	11	12	14.00
$\frac{3}{4}$	3	1	Machine bolts	10	12	19.00

To find the proper length of stove bolt or machine screw required for your work, add length of unit you intend using to thickness of work and the sum is the length to use.

To find proper length of machine bolt to use with sizes $\frac{3}{8}$ -inch and up, add the length of unit to thickness of work and the sum less $\frac{1}{4}$ -inch is the length to use.

Cross Section

Normal Position

Expanded

For Wood Screws—Lag Screws and Lag Bolts

The Van Unit for wood screws has all the elements of expansion and is made in exactly the same way as the Van Unit for machine screws, stove bolts and machine bolts described above.

Note the special features of the Van Expansion Unit for wood screws. Taper of the screw does **not** expand the shell by cutting its own thread. The screw enters into the hard metal cone wedge nut, which is threaded to receive it. Expansion begins when the head of screw bears on the work to be fastened.

Prices Van Quadruplex Expansion Units Only

Size of Screw	Length of Unit, Inches	Size Drill to Use, Inches	For Use With	Standard Package	Price per 100
No. 8	$\frac{5}{8}$	$\frac{5}{16}$	No. 8 wood screws	100	\$ 2.50
No. 10	$\frac{7}{8}$	$\frac{3}{8}$	No. 10 wood screws	50	2.50
No. 14	1	$\frac{7}{16}$	No. 14 wood screws	50	3.50
$\frac{5}{8}$ -inch lag	$1\frac{1}{4}$	$\frac{9}{16}$	$\frac{5}{8}$ -inch lag screws	25	5.00
$\frac{3}{4}$ -inch lag	$1\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$ -inch lag screws	25	6.50
$\frac{1}{2}$ -inch lag	2	$\frac{3}{4}$	$\frac{1}{2}$ -inch lag screws	12	9.00
$\frac{5}{8}$ -inch lag	$2\frac{1}{2}$	$\frac{7}{8}$	$\frac{5}{8}$ -inch lag screws	12	14.00
$\frac{3}{4}$ -inch lag	3	1	$\frac{3}{4}$ -inch lag screws	12	19.00

To find the proper length of wood screws required for your work, add length of unit to the thickness of work and the sum plus $\frac{1}{8}$ -inch is the length to use. For lag screws add $\frac{1}{4}$ inch.

Van Lead Drive Anchors

For Any Kind of Flat Head Bolt

As its name implies the Van Lead Drive Anchor is fastened to brick, stone or concrete surfaces by driving the lead sleeve into the hole around a flat head bolt by means of a hollow punch or piece of pipe. The anchor consists of a die moulded cast lead sleeve into one end of which has been firmly pressed a hollow cone made of a hard composition metal the end being formed to receive a flat head bolt. When used the lead sleeve slides down the hard cone and is forced against the wall of the hole, thus making a permanent fastening, quickly and easily.

Showing Lead Drive Anchor on Bolt. Position After First Blow. Note Expansion Begins at Bottom. Position After Second Blow. Note Bolt Fully Anchored.

H. Channon Company Chicago

The Phillips Spring Hammer

For drilling holes in concrete, brickwork or stone, its action is identical to the air hammer, but the cost is much less. It can be carried to a job and put to work immediately.

Made in sizes to accommodate varying ranges of work. Each size has an adjustment to regulate the force of blow required for the different size holes. The double crank handle balances the load and makes the work easy.

It is simple in construction, compactly built, and all working parts are housed in and protected from the dirt and knocks incident to the service.

No.	Price Each	No. of Blows per Revolution	Size of Plunger, Inches	For Holes, Inches	Weight, Pounds
2	\$30.00	8	$\frac{1}{8} \times 6$	$\frac{1}{8}$ to 1	9
3	\$36.00	8	$1 \times 6\frac{1}{4}$	$\frac{1}{8}$ to $1\frac{1}{4}$	12

The Phillips Overhead Drill

A high speed tool especially designed for drilling over-head holes in concrete, for expansion bolts, for hanging sprinkler systems, steam, gas, water and air piping, electric conduits cables, wires, fans, motors, shaft hangers, etc., and for drilling holes, in mine and tunnel roofs for hanging pipe and wire systems, etc.

The drill is rapid, strong, durable and dirt proof. It does practically the same amount of work as a power tool, at a far less initial cost, with no expense at all for carting, piping, wiring or hose and with upkeep reduced to minimum.

To get the variation in force of blow, which is necessary for greatest efficiency, in drilling the large and small holes, it is provided with two interchangeable ratchet wheels and shafts. One of these (mounted in hammer at factory) gives a long stroke heavy blow for the large size drills, the extra one shown gives an increased number of lighter blows which are most effective for small drills.

Changing the ratchet requires only a few minutes' time and is accomplished with the small wrench furnished with all tools.

Price.....\$60.00

The Phillips Star Drill

Length, Ins.	$\frac{1}{8}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$1\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$	$6\frac{1}{2}$	$8\frac{1}{2}$

24					1.80	2.00	2.10	2.40	2.60	2.70

The Phillips Hollow Drill

We recommend our Hollow drill for all holes $\frac{1}{8}$ -inch and larger, in concrete, brick and soft stone. This drill requires least rotation to alter position of cutting edges for each blow. Cores out 50% of the material removed in drilling which means less work and more holes; whereas, all materials removed with a star or fluted drill is pulverized or hammer to a dust. Hollow drills make round smooth holes, true to size, just where spotted. Will not "run" to mortar joint and hang and will not hang or break up when striking reinforcing steel. Can be resharpened many times.

Extra Hollow Drills—Price Each

Length, Inches	$\frac{1}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$1\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$	$6\frac{1}{2}$	$8\frac{1}{2}$

Finished Case Hardened and Semi-Finished Hexagon Nuts and Jam Nuts

Semi-Finished

Our finished case hardened nuts are finished to the standard adopted by the United States Government, being milled to exact outside dimensions, tapped, threaded and faced off at the bottom at right angles to the thread. Our semi-finished nuts correspond in dimensions with the finished nuts, tapped and faced true on the bottom. Both finished and semi-finished nuts are furnished regularly with U. S. Standard form thread. V threads can be supplied.

H. Channon Company Chicago

Spring Lock Washers

Also Known as Nut Locks, Spring Washers, Split Washers

Type B—Standard or Plain Pattern

Type D—Positive Pattern

Type C—Ribbed Pattern

Coiled from bars of special analysis Alloy steel and properly heat treated to secure greatest amount of toughness and reaction. Guaranteed commercially perfect in quality, finish and proportion. Conform to S. A. E. tests which are extremely severe.

Type B—Plain or Std. Pattern.—The most popular style—is reversible. When compressed, take initial bearing against backing and nut and have great holding power because of frictional bearing obtained. The spring resistance locks and holds the nut. Nuts may be quickly removed.

Type D—Positive Pattern.—Same as Type B except that a sharp projection is stamped on each end. These projections when fully compressed dig into the nut also the backing making it almost impossible to turn the nut off again. This style is recommended where only a very thin section can be used due to lack of space.

Type C—Ribbed Pattern.—The rib when screwed down tight crushes into the first nut thread so tightly that nut and bolt are practically locked together. In addition there is the spring pressure exerted by the coil.

Cast Iron Washers

Gov't O. G. Standard

Malleable Iron Washers

Standard Plain Pattern

200-Pound Kegs

Same diameter as cast iron washer but only half as thick. Holes are clean and surfaces smooth. Practically indestructible as they are made of refined malleable iron.

Size of Bolt, Inches	Price per Hundred Washers	Hole, Inches	Diam., Inches	Thickness, Inches	Approx. Weight, Lbs. Oz.

Special cast or malleable washers furnished promptly upon receipt of sketches, such as angle or star washers, spool, floor or socket washers.

Malleable Iron Washers

With Nut Locking Feature

SEE THAT POINT IT LOCKS WASHER SEE THAT I US IT LOCKS NUT

Same diameter as cast iron washers but only half as thick. Being strong also two-thirds lighter than cast iron washers, considerable saving is effected in freight, hauling and weight to structure. Also save $\frac{1}{2}$ inch in length of bolt used and in addition have nut locking feature without additional cost to purchaser. Nut locking feature does not interfere with its use as a plain washer. Locks by placing cold chisel in any one of the beveled slots—one blow of hammer will turn up a burr and lock the nut.

$1\frac{1}{8}$	370	100	35.00
$1\frac{1}{4}$	460	90	48.00
$1\frac{1}{2}$	700	75	72.00

Galvanized to order. Prices upon request.

No. 2 Tank Lugs

Malleable Iron—For Round Rods—Straight
Pull Type—For Pipe Lines, also Tanks,
Silos, Etc.

The drawing up of only one nut makes this a very convenient and quickly applied lug. Top is closed the entire length.

Diameter of Rod, Inches	Weight per 100 Pieces, Pounds	Number of Pieces in Barrel	List per 100
$\frac{3}{8}$	25	1100	\$ 6.00
$\frac{1}{2}$	35	1000	7.00

$\frac{1}{2}$	220	225	24.00
1	275	190	30.00

No. 3 Flat Band Lugs

Malleable Iron—For Flat Bands—
Single Bolt Type

To apply, insert hoop end under the fingers of the lug. The studs on the lug take the place of rivets or bolts in the perforations of the band, which cannot slip off. Easily applied.

Size of Band, Inches	Size of Bolt, Inches	Price per Pair
$1\frac{1}{2}$	$\frac{1}{2}$ x 11	\$0.40
$1\frac{3}{4}$	$\frac{5}{8}$ x 11	.50
2	$\frac{3}{4}$ x 11	.60
$2\frac{1}{2}$	$\frac{7}{8}$ x 11	.80

Galvanized to order. Prices upon request.

No. 3 D. B. Flat Band Lugs

Double Bolt Type

Lug has lugs as well as holes and can be bolted or riveted as desired.

To apply insert the hoop end under the fingers of the lug. The studs on the lug take the place of rivets or bolts in the perforations of the band which cannot slip off as the fingers hold it in place.

Size of Band, Inches	Size of Bolt, Inches	Price per Pair
3	$\frac{5}{8}$ x 11	\$1.00
4	$\frac{3}{4}$ x 11	2.00

No. 4 Tank or Kiln Lug

Single Bolt Type

Shows section of single bolt lug and corrugated key wedges as applied to tank.

Size of Band, Inches	Size of Bolt, Inches	Price per Pair
$1\frac{1}{2}$	$\frac{5}{8}$ x 11	\$0.40
$1\frac{3}{4}$	$\frac{3}{4}$ x 11	.50

No. 4 D. B. Lug

To apply, bend ends of band slightly as shown. Place lug in position on band—drive in the wedge with corrugated side next to the band—drawing bolts to a good tension—then drive wedges hard—tightening them uniformly.

Size of Band, Inches	Size of Bolt, Inches	Price per Pair
2	$\frac{1}{2}$ x 11	\$0.60
$2\frac{1}{2}$	$\frac{1}{2}$ x 11	.80
3	$\frac{5}{8}$ x 11	1.00
$3\frac{1}{2}$	$\frac{3}{4}$ x 11	1.50
4	$\frac{3}{4}$ x 12	2.00
$4\frac{1}{2}$	$\frac{7}{8}$ x 12	2.50
5	$\frac{7}{8}$ x 16	3.00
6	1 x 16	3.50

The above Special Heads are made up to order.

Dimensions under number of gauge are old standard wire gauge expressed in thousandths of an inch.

For 25 and 50-pound boxes deduct 2c pound, for 100 pounds deduct 3c lb., for 100 and 200-pound kegs deduct 4c pound. Rins made from smaller wire than No. 14, all lengths, list 80c pound; 3-32 diameter use list of No. 13; 7-32 diameter use list of No. 5; 5-32 use list of No. 8; 3/8 diameter list of No. 11; 9-32 use list of No. 2.

For shoulder and pointed rivets add 2c pound, excepting pointed bame, ester and sucker rod. Net extras for tinned or copper plated add 1c per pound to net price. For metallic tinning or brass plating add 2½c per pound to net price. For bright rivets add ½c per pound.

Barbed nails furnished in all sizes and styles at 15c per 100 lbs. over smooth.

We carry an enormous stock at all times.

Common Wire Nails

For Actual Sizes and Extras See Opposite Page

Uniform in length and size. Heads of proper size. Points are right. Rigid inspection. All of our nails are thoroughly cleaned and polished. Kegs are all strong, plainly marked and are guaranteed to contain full weight (100 pounds) of good nails.

Wire nails are used everywhere—the world over—and are as staple as sugar in a grocer's stock.

They are cheap in price—the cost of nails—on any piece of work—large or small—being usually the lowest cost item on the job. Yet there is real economy in getting good nails and the right kind and size. Nails of poor quality often spoil a good job and the damage done makes them high at any price.

Don't buy nails too large in size—they may split the wood or, for the sake of economy order them too thin and have trouble in not being able to drive them.

For Standard Extras and actual sizes, see opposite page.

Standard Cement Coated Nails

"Cooler" Type Head Flat and Thin. Made in Sizes Up to 12 Penny Only.

"Sinker" Type Head is Reinforced by Slight Counter Sinking which Reduces the Diameter.

Square Boat Spikes (200 lb. kegs)

These are driven mostly in hard timbers and it stands to reason that a spike with a clean cut, sharp, chisel point will facilitate the work. The process of manufacturing our spikes insures a product that will drive easily and hold well. Uniform as to length and gauge, drive straight and true. Heads will not fly off.

Sterilized Blued Lath Nails

Lathers carry the nails in the mouth while at work and it is, therefore, from the standpoint of health sanitation, necessary to have the nails free from all injurious substances. Polished or bright nails cannot be made or kept entirely clean owing to process of manufacture as well as the effect of atmospheric conditions.

American Felt Roofing Nails

A large head nail especially designed for use in laying prepared roofing material. This nail, having an extra large head and thin shank, meets admirably the requirements for placing all prepared roofing. The head is reinforced on the shank so that it will not easily pull or break off.

Count per Pound	Length Inches	Gage No.	Diameter of Heads Inches

Wire

The most satisfactory form of handling small wire is on spools. It is closely wound and has a thin coating of shellac to prevent tarnishing. All sizes are listed by English gauge numbers.

We also carry annealed and bright market wire in 100 lb. coils, and stone wire in 12 1/2-lb. coils known as stones.

These are shown on another page. We solicit your orders for any special wire you may be in the market for, and offer our unlimited service.

Wire on Spools

Annealed Steel, Soft Brass, Spring Brass and Soft Copper Wire

One Pound Spools

Annealed Steel Wire

Bessemer Steel Rod (Copper Plated)

In bars four feet long. They are drawn round and true to size from refined steel and are free from flaws, seams, hard spots and sand. They are soft and easy to work and much stiffer than iron rods.

Cold Twisted Medium Open Hearth Steel Concrete Reinforcing Bars (Structural Grade of Steel)

Are favored and specified generally by the leading architects and engineers and are accepted as standard by all. If these bars are used, no criticism can be made as they represent the engineer's conviction of proper reinforcing values—great strength (elastic limit) without any tendency towards brittleness. Among other claims may be mentioned: Elastic limit of 35,000 to 60,000 lbs. per square inch.

Twisting the bars cold is a testing process and cleans the bars from mill scale. Defective steel cannot be put through this work without the defects showing up.

Rail Carbon Bars for Reinforcing Concrete

High Elastic Limit

As compared with plain or deformed (not twisted) mild or medium steel having an elastic limit of thirty thousand to thirty-five thousand pounds per square inch, rail carbon steel will give greater reinforcing strength, or a smaller quantity can be used and an equivalent result obtained.

Hot-twisted rail-carbon steel bars reach a slightly higher elastic limit than plain rail carbon bars, as the result of twisting, and are therefore of more value than plain bars to the extent of the difference in elastic limit, to say nothing of the mechanical bond in twisted steel which by many is considered a great advantage and by others indispensable. Twisted bars weigh the same as square bars of like size.

Properties Considered	Structural Steel Grade (Medium Open Hearth)	Hard Grade (High Carbon Open Hearth)	Cold Twisted
	Plain Bars	Plain Bars	Cold-twisted bars shall be twisted cold with one complete twist in a length equal to not more than 12 times the thickness of the bar.
Phosphorus, maximum, open-hearth.....	.06	.06	.06
Ultimate tensile strength, pounds per sq. in.....	55-70,000	80,000 min.	Recorded only
Yield point, minimum, pounds per sq. in.....	33,000	50,000	55,000
Elongation, per cent in 8-in., minimum.....	1,400,000	1,200,000	5%
Cold bend without fracture.....	T. S.	T. S.	
Bars under 3/4-in. in diameter or thickness.....	180°d.-1t.	180°d.-3t.	180°d.-2t.
Bars 3/4-in. in diameter or thickness and over.....	180°d.-1t.	90°d.-3t.	180°d.-3t.

Boughton Tool Steel

Octagon

Round

Square

Flat

Owing to the great variance in the terms and names of tool steels, considerable confusion has arisen. To avoid delays and unnecessary correspondence resulting from mistakes, we suggest that our names be used when ordering. If tool steels are ordered by our grade names, i. e., AAA1, A, B, C, etc., we can then fill orders quickly and there will be no cause for misunderstandings and complaints.

Grades

The following grades of tool steel are carried in stock, both annealed and unannealed. The standard stock lengths are 10 feet for annealed and 14 feet for unannealed steel. When shorter lengths than standard are ordered there will be an extra charge for cutting. (See list of extras.)

Grade AAA1 Special High Speed Steel. This is the highest grade of alloy steel it is possible to produce and is the equal of any on the market. It is capable of the utmost that can be required of tool steel in the way of heavy cuts, high speeds and on hard materials. It will hold its hardness even when the point of the tool becomes a dull red.

Base price, per pound

Grade A High Speed Steel for Woodworking Knives. A high grade alloy steel especially adapted for thin machine knives of all kinds. It is exceedingly tough and hard in the bar, ready for use, and is not so subject to heat influence as carbon steel. It is only necessary to cut to the required length and grind bevel. Base price, per pound.

Grade B Special Carbon Tool Steel. The highest grade of carbon tool steel made. It is intended for expensive cutters, drills, forming tools, taps, dies, reamers, punches, etc., and turning, planing and slotting hard material. Highly recommended for all purposes where great strength, long endurance or excessive duty is required. Base price.

Grade C Extra Carbon Tool Steel. This grade is intended for all purposes requiring carbon steel of extra quality, such as lathe and machine tools, cutters, taps, edge tools, chisels, dies, shear blades and punches. This is the best grade of steel for general use. Base price, per pound.

Grade D Carbon Tool Steel. For all ordinary purposes such as rock drills, cutting tools, hammers, swages, ball bearings, etc., and tools whose use does not warrant using a higher priced steel. Will give good service for the use intended, although it is advisable to use Grade B or C for the best results in Carbon Steel. Base price, per pound.

Annealing

When ordering always state whether annealed or unannealed steel is wanted. An extra charge of 1 cent per pound (all grades) is made for annealing.

Standard Carbons

All grades of our tool steel can be furnished in about 8 different carbon percentages. This has no relation to the price or quality; the lower the percentage of carbon the milder the steel. The size and shape of the bar is generally a safe guide as to the purpose for which the steel is to be used but we prefer customers to specify the purpose for which the steel is to be used.

When Ordering Tool Steel

Specify the grade of steel wanted. Specify the purpose for which the steel is to be used. Specify whether annealed or unannealed steel is desired. Order sizes large enough to allow for removal of the decarbonized surface of annealed steel, which should be taken off before hardening. To avoid cutting charges, where exact length is not necessary, specify "about" so many feet. This enables us to send nearest length in stock.

Net Extras

The extras given below in cents per pound are to be added to the price for regular bar sizes. This is known as Base or Base Price. All dimensions are inclusive.

Crescent, Sanderson, Novo, Jessop and other Grades also furnished from Chicago Stock.

Prices quoted on application.

When Grade is not specified we always furnish Grade C Extra Carbon Tool Steel.

Anti-Friction Bearing Bronze

The special mixture, superior quality of the metals used, and the skill and experience employed in the processes of mixing and casting, combine to produce a bearing metal which has no equal on the market.

It is used by manufacturers of the best high speed and hard service machines in use and many tests have proven it to be the best bearing metal obtainable.

It will not granulate nor flake. Each bar is cleaned by sand blasting and carefully inspected before shipment.

In ordering cored bars always allow $\frac{1}{8}$ inch for finish. Outside diameters should be $\frac{1}{8}$ inch larger and inside $\frac{1}{8}$ inch smaller than when finished. All bars are furnished in the rough.

The following sizes are carried in stock for immediate delivery.

Hollow Bars 12 Inches Long									Solid Bars 12 Inches Long

Shapes other than listed, special prices quoted upon application.

Angles and Channels Cut to Uniform Specific Lengths

1 in. to 2 in.	2 in. to 4 in.	4 in. to 6 in.	6 in. to 12 in.	12 in. to 96 in.	96 in. and over.	
6c.	4c.	3c.	2c.	No charge	1c.	list advance

Shorter than 1 in. special prices quoted upon application, not less than 6c. list advance.

Roll and Sheet Brass and Commercial Bronze

Prices are for 100 lbs. or more of one item of sheet metal in one order; for items of less than 100 lbs., see foot-note on page 308.

Brown & Sharpe's Gauge The Standard

Table Revised January 1, 1916

Extras Over Base Prices

[illegible]

All metal heavier than No. 6 gauge, listed and charged as sawed metal, whether sheared, slit, or sawed.

Metal between gauges takes price of nearest gauge.

Circles cut from above metal, over 6 in. and not exceeding 12 in., No. 10 gauge and thinner, 6c list advance.

Circles cut from above metal, over 6 in. and not exceeding 12 in., thicker than No. 10, 10c list advance.

Circles cut from above metal, 6 in. and smaller, and larger than 12 in., special prices quoted upon application

Segments, pattern sheets and irregular shape blanks, special prices quoted upon application.

Polishing one side. No. 16 and heavier (per pound), 4c list advance.

Polishing one side, lighter than No. 16 (per square foot), 10c list advance.

Polishing both sides, double the above prices.

Sheet metal extra leveled, special prices quoted upon application

Sheet metal 14 in. wide and narrower, cut to uniform specific lengths, add the following list advances:

1 ft. to 4 ft.	4 ft. to 6 ft.	6 ft. to 8 ft.	8 ft. to 10 ft.	10 ft. and over, special prices quoted upon application, not less than 6c list advance.
<u>1c.</u>	<u>2c.</u>	<u>4c.</u>	<u>6c.</u>	

Sheet metal, 14 in. wide and narrower when ordered cut to multiple lengths of any specific length less than 24 in., no charge for cutting.

Sheet metal, 14 in. wide and narrower, cut to specific lengths, shorter than 12 in., special prices quoted upon application, not less than 1c. list advance.

Sheet metal wider than 14 in. cut to uniform specific lengths, special prices quoted upon application not less than prices for cutting 14 in. wide.

H. Channon Company Chicago

Brazed Brass, Bronze and Copper Tubing

Brown & Sharpe's Gauge The Standard

Prices are for 100 pounds or more of one item in one order. For items of less than 100 pounds, see foot note on preceding page.

Extras Over Base Price

All tubing between gauges takes prices of nearest gauge.

Square and Hexagon tubing, over corresponding size and gauge of round tubing, 6 cents list advance

Rectangular tubing, over corresponding size and gauge of round tubing, of narrower dimension, 6 cents list advance

Fancy pattern tubing, over corresponding size and gauge of round tubing, 8 cents list advance

Extra fancy pattern tubing, over corresponding size and gauge of round tubing, 16 cents list advance

Combination tubing, 25 cents list advance

For diameters of the fractional parts of an inch, where no price is given, take the column to the left of where such size would appear if designated.

Brazed Tubing Cut to Uniform Specific Lengths

Base sizes are $\frac{3}{4}$ diameter and larger by $\frac{3}{4}$ inches and longer with square nuts. Unless otherwise specified, we supply O. H. steel bolts with square nuts and U. S. Std. rolled threads. Other sizes than listed supplied promptly. Bolts with Harvey ratchet grip threads with Ideal recessed nuts quoted upon request. Send samples of special bolts.

Standard Steel Railroad Spikes

200-Pound Kegs

These spikes have clean cut, sharp, chisel points to facilitate driving into hard timbers. Spikes drive easily and hold well after driving. Heads will not fly off.

$\frac{3}{4}$ x $5\frac{1}{2}$		Base	45-100	340			

Reversed point spikes can be furnished from mill at 25c per 100 pounds extra. Other sizes can be furnished at slight extra charge. $\frac{1}{2}$ x $1\frac{1}{4}$ to 3 inches— $\frac{1}{2}$ x 2 to 4 inches— $\frac{1}{2}$ x 2 to 4 inches— $\frac{1}{2}$ x 3 to 4 inches— $\frac{1}{2}$ x 2 to 4 inches— $\frac{1}{2}$ x 5 to 6 inches and $\frac{3}{4}$ x $5\frac{1}{2}$ to 6 inches. Shimming Spikes— $\frac{1}{2}$ x 7 and 8 inches take base price. Screw spikes upon request.

The Grip Nut

The Boss Lock Nut

Goes on either side and locks by one-half turn. Fits rolled or cut threads also under size threads. Can be used again and again—does not injure threads. Registers deeply and firmly into valley of threads of bolt. Its impinging edges seize the primary nut locking all three members. List same as grip nuts.

The Grip Nut

Locks by friction on deflecting threads. Does not require jamming or springing. Standard on many railroads.

Three-Way Turnout Fig. 81

Three-Way Side Turnout Fig. 82

Side Turnout Fig. 83

Portable Bridge Fig. 86

Crossing Fig. 84

Diamond Turnout Fig. 85

The above illustrations show light portable track material for mines, quarries, plantations, rolling mills, docks, industrial plants, etc.

We can supply also split switches, crossings, switch stands, head chairs, etc., for light or standard rail upon receipt of proper information, see below.

Information Required

The following information must accompany inquiry, in order that goods may be manufactured correctly and shipped promptly:

Rigid Frogs.—Angle, length over all and length of main point; height and weight of rail, spacing of splice-bar holes, i. e., the distance from end of rail to center of first hole, distance between centers of first and second holes. If convenient, send sketch showing dimensions of rail, or refer to mill rolling the rail, giving their section number. If curved frog is wanted, specify whether right or left hand and radius of curve.

Turnouts.—Gauge of track, height and weight of rail, spacing of splice-bar holes, radius of center line and whether right or left hand. Turnout is designated as right or left according to direction of curve when standing at switch and facing frog.

Split Switches.—Length of switch, gauge of track, height and weight of rail, spacing of splice-bar holes, throw of stand to be used in connection with switch and diameter of hole in end of head rod.

Switch Stands.—Throw of stands, whether single or double throw, style of target desired and dimensions of mast top for lamp.

Crossings.—Angle between intersection of tracks, gauge of tracks, height and weight of rail and spacing of splice-bar holes. If the tracks are of different gauges, or if either track is curved, send plan with gauge marked on each track, and direction and radius of curve. The angle of crossings on curves should be given between the tangents at the intersection of center lines.

Head Chairs.—Drawing of rail with which they are to be used, or width of head and base, throw of switch-stand, and whether for two-way or three-way turn-out.

Stub Switch Tie Bars.—Drawing of rail used or width of head and base and gauge of track.

Track Drilling Machines

New Style Paulus

Moore

Beland

New-Style Paulus Track Drill—For light and heavy drilling. Has two distinct feeds and dust-proof ball bearing thrust reducing friction and promoting ease of operation. An arrangement feeds and returns bit quickly to and from work. Handles are adjustable and can be lengthened for heavy feeding and large bits. Frame is malleable iron "T" section combining strength with lightness. Has Rich spindle for using Rich flat bits of high speed steel. Can also be fitted with plain spindle for using twist bits. Weight 95 lbs.

Type A is the standard overclutch which is largely used and needs no introduction. Type B is the special hook designed to enable operator to drill holes close to the end of rail. Another advantage of this type is that hook may be lengthened so that fish plates may be drilled at the same time as rail.

Type C is the underclutch type. A few roads still order this form of clutch. Most, however, call for the overclutch as it is more quickly handled and convenient.

Type D is for drilling girder rails. Adjustable screw supports hook in desired position. Also useful for drilling I-beams, size of hook enabling operator to drill to the center of 15-inch beams.

Paulus Track Drill—A standard type; automatic feed; will collapse to allow passage of train without disturbing drill. Price with one drill bit.

With Rich spindle and flat bit	Types A, B, or C	\$50.00	Type D	\$35.00
With twist bit spindle and twist bit	Types A, B, or C	\$40.00	Type D	\$44.00

Moore Track Drills, Nos. 1 and 2 are designed for heavy and severe work. Have detachable uprights with adjustable rail hooks which go over top of rail and are easily erected and secured. This overclutch hook may be lengthened quickly for drilling through splice bars, angle bars, guard rail, frogs, crossings, etc., by removing one bolt. The rail hook can then be adjusted to suit the conditions and bolt put back in a few seconds' time. This cannot be done with any other drill on the market. Hook can be quickly removed to allow trains to pass by shifting eccentric lever in the back brace. When taken apart the drill can be easily carried by one man. Can also be fitted with underclutch if desired.

No. 3 is designed for use where fewer sizes of holes are to be drilled and hardness of rails is more uniform. Has three changes of feed and same detachable rail hook and upright as in Nos. 1 and 2. One man can operate drill when drilling holes from $\frac{3}{4}$ to $1\frac{1}{4}$ inch, or two men from 1 to $1\frac{1}{4}$ inches.

No. 1. For drilling holes up to 1 inch. Each. \$37.00

No. 2. For drilling holes up to $1\frac{1}{4}$ inch. Each. \$43.00

No. 3. Either under or overclutch pattern. Each. \$56.00

Beland Track Drill is of ratchet type and is both strong and convenient to handle.

Price complete	\$6.00	Drill bits, each	\$0.35	Ratchet, each	\$3.00

Economy High Speed Track Bits (All 6 1-4 In. Long)

No. 504. Flat Beaded.

No. 505. Flat with Round Slabbed Shanks.

No. 509. Flat with Combination Flat Beaded and Round Shank.

Fitting Flat Drill Chucks on Paulus, New Style Paulus, Buda, Climax, Gorder and Harvey Track Drill Machines.

Thickness of bits $\frac{1}{2}$ inch to $\frac{3}{4}$ inch is $\frac{1}{8}$ inch. No. 1 Bead. Thickness of bits $\frac{3}{4}$ inch to $1\frac{1}{4}$ inch is $\frac{1}{4}$ inch. No. 2 Bead. Size given is for shank end of bit. Point end is $\frac{1}{8}$ inch larger.

Fitting chucks on Paulus, Buda, Harvey, Francis Reed & Co.'s Nos. 18 and 19, Duntley and Sheffield Car Co.'s Track Drilling machines.

Thickness of bits $\frac{1}{2}$ inch to $\frac{3}{4}$ inch is $\frac{1}{8}$ inch. Thickness of bits $\frac{3}{4}$ inch to $1\frac{1}{4}$ inch is $\frac{1}{4}$ inch. Shanks on these bits are $2\frac{1}{4}$ inches long, .648 diameter, commonly called $\frac{5}{8}$ inch. Size at point end is $\frac{1}{8}$ inch larger than diameter of drills given.

This bit will fit all Chucks for track drilling machines listed under Nos. 504 and 505 bits above. Also for Rich Chucks.

Thickness of bits $\frac{1}{2}$ inch to $\frac{3}{4}$ inch is $\frac{1}{8}$ inch. No. 1 Bead. Thickness of bits $\frac{3}{4}$ inch to $1\frac{1}{4}$ inch is $\frac{1}{4}$ inch. No. 2 Bead. Shanks on these bits are $2\frac{1}{4}$ inches long, .648 diameter, commonly called $\frac{5}{8}$ inch. Size at point end is $\frac{1}{8}$ inch larger than diameter of drills given.

Bridgebuilders' Tools

A bridgebuilder's tool that is worthy of the name must first of all be manufactured from the very best quality of tool steel that is practicable for the purpose. It must also be forged by skilled workmen—men who are thoroughly familiar with every detail of their trade—men who know the hard usage to which each tool will be subjected and who realize that careful workmanship is almost as necessary as high quality steel. Of just such high quality tool steel and by just such workmen are Channon bridgebuilders' tools manufactured. We guarantee them to be the very best obtainable for the price and unhesitatingly recommend them to the contractor or workman who wants the very best.

Hand made from best materials.

Price each.....\$7.50

Fig. 104

Samson Rail Benders

Will bend 100-pound rails into position when taking kinks out of track, without drawing spikes. Can be operated by one man. Frame is of open hearth steel, extra strongly made. Screws are of steel, working in bronze nut and provided with anti-friction washers. Thrust is of hardened steel. Weight each 100 pounds, price each. \$60.00

Roller Rail Benders and Straighteners

Place the bender over rail as shown in illustration, then turn up nut on center screw until it is set for the desired curve; place socket wrench on pin in center roller, put long lever on the top of socket and then one or more men can turn the center roller which causes bender to move forward on rail bending same as it moves. For the purpose of straightening rails, place bender on the opposite side of curve and operate as above.

Car Replacers

Johnson Wrecking Frogs or Car Replacers

These are in general use by Standard and Logging Railroads, Contractors and Mines. Have three points of contact for support—at small end by rail, at broad end by rail and tie. Straddle the rail and replace wheels on both sides of rail at one setting. Do not require bolts, clamps, spikes or wedges to hold in place while in operation. Fit all sections of T rail from 6 inches down. These frogs will also de-rail.

Type	For Rail up to	Capacity Locomotive	Wt., Lbs.	Price per Pair

3	60 to 100 lbs.	242	31.50
4	80 to 100 lbs.	184	29.00

The Aldon Car Replacers

Frogs are marked right and left. The right frog is always placed adjacent to the right rail, the left frog to the left rail. Place the high ends as close to the rail as possible. The wings at the low end of the frogs must never be placed on top the flange of the rail.

No.	Material	Equipment Suitable For	For Rail Up to	Wt., Lbs.	Price per Pair
1	Cast Steel	Heaviest	100	200	\$31.50
2	Cast Steel	Modern	85	180	29.00

4	Mall. Iron	Industrial	35	55	19.50
5	Mall. Iron	Street R'y	40	40	9.50

Buda Car Replacers

Fig. 1 shows Inside Replacer which should be placed to the rail so that sufficient space is left for flange to enter. Fig. 2—Outside Replacer which should be placed as close as possible to the rail.

Replacers are furnished in four different sizes. Nos. 1, 2 and 3 are of heavier construction and designed for extra heavy equipment and service. No. 4 is similar in every respect to No. 3, but lighter in weight.

In order to eliminate chance of error please refer to the table herewith, when ordering.

Car Movers

"Easy" Steel Car Pushers

As shown in the cut the heel has lugs extending downward on both sides of the rail so as to hold it firmly in position and prevent it from slipping sideways. The triangular bit, or steel cuts into the rail when pressure is applied and prevents slipping backward, even though the rail is icy, greasy or wet. This bit can be inverted. Each one has three sharpened edges. When the pressure is released, the steel spring lifts the steel bit from the rail, thus preventing it from being dulled by sliding over the rail when following the wheel. Two triangular steels with each pusher.

The bar "A" is steel; the shoe is malleable; the bit "D" is of the finest tool steel; the spring "C" is also of fine steel. Weight 20 lbs. Length 5½ feet.

Price each.....\$10.00
Triangular spurs, each......50

"Badger" Car Mover

This car mover has a quick-acting compound leverage that will move the heaviest loaded cars, and 50 ton cars can be handled with ease and rapidity. Is light, well-balanced and made of malleable iron. It has double concave spurs which grip the corner of the rail firmly and when moving a car it is impossible for them to slip even when dulled by long wear. The spurs are made of best tool steel and held in place by a spur plate which can be changed, or new ones inserted if necessary, with the aid of a common wrench. Handle is hard maple. Weight 17 lbs. Length, 5½ feet.

Price each.....\$10.00

"Atlas" Car Movers

A very powerful device for starting and moving loaded cars by hand. The compound lever arrangement causes the wheel to go forward and does not lift it from the rail as in the case of many car movers. It will work on any rail whether wet or greasy and can be had with either single straight spur or double spurs set at an angle; when worn by long use they may be taken out by simply loosening a nut and bolt and turned to a new edge.

No. 8 has single spur and can be used on any rail. Weight 19 lbs. Length, 5½ feet.

Price each.....\$10.00
No. 10 is equipped with double spurs for use if the rail is unobstructed on the sides one-half inch down. Weight 19 lbs. Length, 5½ feet.

Price each.....\$10.00

"Samson" Car Movers

*When ordering state if required square or triangular.			

Cross section of an ordinary style roller, showing checks from the heart.

Quartersawn Rock Maple Rollers

The Channon Quartersawn Maple Rollers have no hearts in them to check.

Channon Quartersawn Maple Rollers are turned from the best and toughest part of sound, selected Rock maple logs. There are no hearts in them to weaken them and checking from the heart is eliminated.

They will stand twice the strain of the old roller and last many times longer, and they cost only a trifle more. A big saving is effected when the additional service rendered by these rollers is considered. Given a trial quartersawn rollers will always replace the cheaper heart rollers.

The Treatment and Care of Maple Rollers

Checking in rollers is caused by the fact of the surface of the roller drying out faster than the inside, and the outer rim of fast drying wood having to accommodate itself to the still damp and larger core.

No matter how many years a maple square has lain in pile there is always some moisture present inside it and as soon as it is turned into a roller it starts drying out further. Checking can be eliminated by taking care of the rollers and seeing that they dry out evenly throughout.

Hearts in rollers are poor investments, for the useless heart wood is not of the same tensile strength, fibre, density or weight as the select sap wood surrounding it and cannot be made to dry out at the same rate as the sap wood.

A heart roller weighs just as much as a Channon roller. Channon rollers last more than twice as long as others and the freight saving alone will just about pay the difference in cost.

We ask at least one week's time on each order for rollers, as they are never carried in stock but turned to suit the individual requirements of the order as it comes in, and then oiled, painted and inspected twice before leaving.

Special Maple Rollers and Squares

We can supply rollers of 10 inches to 14 inches in diameter if desired and large maple squares or heavy planking with no hearts in lengths up to 16 feet.

We can also supply rollers with iron bands on the ends and with steel shafts through and projecting from each end for Mine and Conveyor rollers, etc., etc.

H. Channon Company Chicago

Sterling Pike Poles

Pike and hooks are hand forged from one piece of crucible steel. Ferrules are made seamless from Norway iron and are very strong; cannot possibly become loose.

Tamping end shod with 1 1/2 x 3/8-inch steel shoe riveted through select hardwood handle. A high-grade tamping bar.

Pickaroons

For handling ties and mill refuse. Rock maple handles, 36 inches long, 1 1/4 inches at bulge. Pikes forged from one piece of crucible steel. Weight each, 2 pounds.

No. 417. Price each \$1.51

Hookaroons with Axe Handles

For handling pulp wood, cedar posts, etc. Weight about 2 1/2 pounds each.

Price each \$1.69

Skidding Tongs

Hooks hand forged from best crucible steel with plain swivel grab hook.

Giant Tongs

All hand forged of best hammered crucible steel with rings and clevises of Norway iron, chilled steel rivets. Same as illustration, but without grab hook.

"Sterling" Standard R. R. and Contractors' Cant Hooks

Malleable Iron Clasp and Extension Toe Ring. Crucible Forged Steel Hook, $\frac{1}{4} \times \frac{3}{8}$ -inch with Heavy Upset Head and "Duck Bill" Point

These are the standard cant hooks for general use. No. 58 always sent unless otherwise specified.

No. 56. Same as No. 58 except has 3x5 handles for hard service. Shipping weight per dozen about 125 lbs. Price each, \$1.60. Price per dozen, \$28.85

No. 58. With "Duck Bill" hook and extension toe ring. Air-seasoned, $2\frac{1}{2}$ -inch by $4\frac{1}{2}$ -foot rock maple handles. Shipping weight per dozen about 100 lbs. Price each, \$1.00. Price per dozen, \$19.00

No. 57. Same as No. 58 except has $2\frac{3}{4} \times 5$ handles and long hook for heavy timber. Shipping weight per dozen about 110 lbs. Price each, \$1.26. Price per dozen, \$23.15

"Sterling" Malleable Split Socket Peavies

With "Duck Bill" hooks and selected rock maple handles. Hooks are crucible cast steel with heavy upset head, $\frac{1}{8}$ -inch square steel. Sockets fitted and driven on handle when cold. Socket is split above the hook and can be tightened by bolt in case of shrinkage.

Genuine Barrett Lifting Jacks

No. 1 Trip or Track Jack

No. 10 Combination Jack

No. 223 Mine Jack

No. 1 Track or Trip Jack has compound double acting leverage, that is, the load is raised half a notch on both upward and downward strokes of lever. Load can be instantly dropped from any elevation by means of trip at side of lever socket. It is positive, speedy and durable, and is the recognized standard track jack adopted by the leading railroads. The No. 17 Jack is the same as No. 1, except that it is single acting, raising load on down stroke of lever only.

No. 6 Track Jack is especially recommended for ballast gangs. It has greater height and raise than the other track jacks shown here and has handles on both sides for convenient carrying. The No. 20 Jack is the same as No. 6, but is single acting. No. 7 Jack is also very similar to No. 6, being single acting and with medium height and raise.

No. 10 Combined Trip and Automatic Lowering Jack will lift, lower and trip or drop loads from any elevation in its range, making it a very popular number. It is double acting, raising load on both upward and downward motion of lever. No. 10 Jack can be used for general purposes as well as track work, but all other numbers described above are intended for track work only.

Nos. 26 and 23 Mine Jacks are especially suitable for surfacing, ballasting and leveling mine track and for handling equipment that does not require gradual lowering. They are of the Trip Jack type, embodying a trip which pulls the pawls out of mesh with rack when desired, thus instantly dropping the rail or other load to the ground. They are light, quick acting and reliable, single acting, recommended for track work only.

Nos. 226 and 223 are especially popular for adjusting coal cutters. There are only three simple operating parts; the machine cut steel rack, socket lever and retaining pawl. These jacks may be lowered notch by notch when under load, or may be dropped instantly when free. There are no parts to rust out or to get clogged with fine rock, grit or dirt.

No. 101 New Barrett Track Jack

The No. 101 Track Jack is a new modified No. 1 Jack, embodying sweeping improvements in design and construction. It has only four operating parts; rack, two pawls and socket lever. Fulcrum pin, side plates and rivets are entirely eliminated, the socket lever being made of steel with trunnions cast integrally therewith, and with openings cut in shrouding of pawl bearings, so that pawls may be easily slipped into place. Trunnion bearings have closed-end steel bushings, packed with grease sufficient for a year's lubrication. If trip should become lost or broken, an emergency trip lug, embodied in the lower pawl, interlocking with a slot in upper pawl, may be conveniently used for tripping. Repair cost is reduced fully 50% due to the effective lubrication made possible by the closed end bushings and elimination of fulcrum pin, side plates and rivets.

No. 101. Capacity 10 tons. Height 24 inches. Raise 13 1/2 inches. Weight 65 pounds. Price each..... \$25.00

No. 119 New Barrett Automatic Lowering Jack

This Jack is the same height and rated capacity as No. 19, is single acting and designed for car repair work, having important structural improvements. Due to its easier operation it will raise heavier cars than the No. 19 jack.

The reversing mechanism is reduced to only four parts, less than half the usual number, and renewable at less than half the usual cost. The socket lever is of high grade carbon special analysis steel (not malleable iron) having trunnions cast integrally, eliminating the ordinary fulcrum pin. Side plates and rivets are also done away with by the new shrouded and slotted pawl bearing design. Pawls are double pointed so that four teeth are always in mesh. This makes raising easier, and stripping of teeth or slipping of pawls impossible. Improved rib reinforcement of base increases its strength greatly without adding to its weight.

No. 119. Capacity 15 tons. Height 28 inches. Raise 17 1/2 inches. Weight 91 pounds. Price each..... \$35.00

No. 101 Track Jack

No. 119 Jack

Barrett Automatic Lowering Jacks

No. 51

No. 2

No. 18

No. 19

Nos. 50, 51, 2, 3, 4 and 5 Jacks are all double acting, raising the load one notch on both upward and downward strokes of lever.

They lower the load gradually, cannot be tripped, hence their name "automatic lowering jacks." The direction, up or down, is controlled by the convenient eccentric at side of jack.

Nos. 50 and 51 are especially popular for mining, agricultural and contractors' machinery.

No. 2 is the standard for all general utility purposes and is used universally by contractors, bridge builders, electric and steam railways, etc.

Nos. 150, 151, 18, 19, 39 and 49 Jacks are single acting, raising load on down stroke of lever only.

Nos. 150 and 151, 5-ton jacks are very popular for mining, agricultural and contractors' machinery of moderate weight.

No. 18 is the standard single acting jack for all general utility purposes.

No. 19 is the standard jack for repairing empty and lightly loaded freight cars, and is made in three heights as listed below (Nos. 19, 39 and 49) to suit the height requirements of various types of cars.

Single Acting Emergency Car Jacks

No. 239

The most powerful non-geared emergency car jack made. Carried on every car of many important electric roads for use in cases of accidents and derailments. Also coming into extensive use for other special and general lifting purposes due to the convenient forged claw, hung on a ball and socket joint so that it is free to swivel sideways 120 degrees (around the jack) and out from the base of jack when the latter is set in an inclined position or used as a car replacer. The full rated load, 15 tons, may be lifted on this claw, when jack is inclined up to 15 degrees under full load and jack may be tipped to 40 degrees angle under lighter loads, as long as head is supported by side of load.

No. 239. Capacity 15 tons. Height 22 inches. Raise 10 1/2 inches. Weight 97 pounds.

Price each \$55.00

Geared Automatic Lowering Jacks

No. 29

No. 230

Nos. 29 and 130 Jacks are provided with powerful machine cut steel reducing gears, providing ample leverage for operation under heaviest loads within their respective rated capacities. They are single acting, raising or lowering load on down stroke of lever only.

No. 29 has a forged steel toe lift at the side and No. 130 can, when desired, be provided with a separate drop forged claw hung from top of rack. The cost of such a claw is additional to the price shown below. Both of these jacks are sturdy, simple and efficient.

No. 29. Capacity 25 tons. Height 28 inches. Raise 17 inches. Weight 190 pounds. Price each, \$95.00

No. 230. Capacity 35 tons. Height 28 inches. Raise 17 inches. Weight 240 pounds.

Price each \$120.00

Jack Screws Locomotive or Screw Jacks

The stands of these jacks are cast from the best quality grey iron that can be procured. Screws are wrought steel with machine cut threads; levers are extra and are sent only when ordered. Sizes other than those shown are not carried in stock, but are furnished upon short notice.

Pearson Pulling and Pushing Jacks

Nos. 1 and 2 With Hooks For Pulling Only

Nos. 3 and 4 for Pulling and Pushing

Made in two sizes, of malleable iron and steel. Largely used in repairing steel cars and trucks; also in all classes of structural work, pile driving, etc. A valuable addition to wrecking outfit.

Fig. 2, at left, has ratchet lever. Fig. 1, at right, has wrench lever shown at bottom

Telescopic Steel Jack Screws

These jacks consist of two screws, one working within the other. By this method of construction, the screw can be run out nearly twice the height of the base, making the shortest jacks in use for the length of lift.

Channon Improved Stone and Machinery Jacks

These jacks are largely used by stone companies, marble works, quarries and stone yards, safe movers, foundries, machine and bridge shops, mining companies, etc. They are safe, simple and reliable, consisting only of rack, pinion and gears contained in and protected by the iron housing. There are no cams, springs or tripping devices to get out of order or become lost. The pinions and gears are milled from solid forged steel casting blanks, racks from forged bars.

The iron frame jacks are preferred by most as the frame is unbreakable and has no wooden parts to shrink or split.

At a slight advance we furnish jacks with all bearings bushed with our self-lubricating bronze bushings which require no oil or attention.

Jacks may be operated at any angle. Note the points at base to prevent slipping.

All jacks furnished with foot-lifts, cranks and swivel heads.

Buda Ball Bearing Jacks

Nos. 101-102

No. 110

Nos. 113, 114, 115

Nos. 116, 117, 125

No. 127 Extra Heavy

Car Locomotive Jacks

The ball bearings are held in place by a phosphor bronze cage which prevents them from rubbing together.

All screws are made of high carbon steel and cut with great accuracy. The bronze nut through which main screw passes is well supported by heavy shoulders. All gears are machine cut from solid steel forgings, no cast gears being used.

"Postop" Bridge Jacks

"Postop" Jacks are so called on account of the nut at the bottom of the main screw which prevents screw from being turned higher than the limit intended. Hence bent screws are impossible. For raising heavy loads these jacks are excellent for speed, safety and convenience. They weigh much less than hydraulic and other heavy duty jacks. They will not trip or run down, so that loads may be left standing on them with perfect safety.

Buda Mine Jack

Single Acting

Particularly adapted for use in mines. This jack is of ample capacity for the kind of work for which it is intended and very convenient to use in cramped locations.

It is single acting, operating on the downward stroke of the lever. The construction is very simple and there are no complicated parts to get out of order or become lost. In addition there are no springs liable to become rusted out by mineral waters.

It is also useful on narrow gauge roads and for use in connection with wagons.

This jack is much more substantial than the usual jack of this type. It is well constructed throughout and particularly high grade for a small capacity jack.

Is especially suited for small and medium loads where the jack must be applied in various ways and under rugged conditions.

Duff Ball-Bearing Screw Jacks

No. 64

Nos.
60
and
68

These Jacks are accurately made of highest grade materials. Screw is of crucible steel and revolves in a specially compounded bronze nut. Load is carried on a large ball-bearing, reducing friction on the head of jack 90%. Jack is operated by a simple ratchet and bevel gear.

*These Jacks have cone bearings.

Duff High-Speed Ball-Bearing Jacks

In these Jacks the high operating speed is obtained by means of the high pitch double thread screw, which also tends to high mechanical efficiency, making raising very easy and permitting a boy to lower the heaviest load by simply turning small crank handle without ratcheting. Shell and stem are of cold drawn steel. Nut is of special bronze, having a tensile strength of 90,000 lbs. Each ball in the bearing tests up to a strain of 110,000 lbs. and the two ball bearing plates are of chrome nickel steel.

Norton High-Speed Ball-Bearing Jacks

All Norton Jacks are not high-speed, therefore to avoid confusion, kindly order by number.

Norton High-Speed Jacks are absolutely safe and cannot slip or drop the load. They are positive, reliable and guaranteed in every respect.

No. 5380 is intended for heavy service where long lift is required for Pull-man cars, heavy coaches, etc. It is of crucible steel and one of the lightest jacks made for this service. Nos. 5200, 5260, 3200, 3260 and 3330 are of the same general pattern as No. 5380, differing in capacity.

Nos. 5205, 5265, 3205 and 3265 are equipped with a foot lift on which one-half the full capacity may be lifted, adapting them to bridge and wrecking service.

Norton Ball-Bearing Bridge Jacks

These are Ratchet Screw Jacks with ball-bearings. They have no valves or packing, require no filling or attention, but are always ready for use. Gears machine cut from solid forged steel and are kept perfectly adjusted by a set screw. These jacks are used by railroad contractors and bridge builders all over the country.

Jacks will lift on foot about one-half their rated capacity

15 and 35 Ton

Duff Bethlehem Forged Steel Hydraulic Jacks

Plain Base

This type of jack is made with a round base and is used where a firm foundation can be secured and the working space will not admit a larger base. This is a very popular model.

Broad Base

The broad base gives a very solid foundation. These jacks are used extensively by railroad, machine, car and locomotive works. Base is a solid steel working integral with cylinder.

Fixed Claw

Used principally for railroad wrecking cars or other outside work, and is fitted with an extra steel sleeve which prevents dirt or other foreign matter from reaching the ram.

Wrecking

Where there is not sufficient room to get head of jack underneath load, this jack is very convenient. Claw or toe piece, is drop forged, an exclusive feature of Duff Bethlehem jacks.

The Duff-Bethlehem Forged Steel Hydraulic Jacks have several special features embodied in their construction, not found in other hydraulic jacks.

The cylinder and ram are constructed of open hearth fluid compressed forged steel, very much superior to forged steel or cast steel, as the former has greater uniformity and closeness of grain, and from 30 to 60% higher tensile strength. These jacks can, therefore, be made nearly twice as light as other jacks of the same capacity. A weight of 150 pounds at the end of the operating lever balances the maximum rated lift of the ram, thus one man can readily operate a jack to its normal capacity.

The most difficult and troublesome packing to make tight in hydraulic jacks is at the bottom of the cylinder. This packing is eliminated in the Duff-Bethlehem Jacks

by forging the cylinder and base in one piece, thus the usual packing at this joint is entirely dispensed with.

Another packing which frequently causes trouble is also obviated, viz., the one insuring closure of the ram piston from the pump socket, as the Duff-Bethlehem jacks have a practically solid ram bottom, integral with the pump barrel.

The operating mechanism contains a minimum number of parts, all of simple and strong construction, and readily duplicated. Duff-Bethlehem jacks have from 30 to 60% fewer interior parts than any other hydraulic jack on the market and are correspondingly less likely to get out of order. There are no operating valves projecting beyond the body of the jack, which minimizes the opportunity for breakage from careless handling and rough usage.

Wilmington Hydraulic Jacks

Plain Hydraulic Jacks

These jacks are intended for use where a firm foundation can be secured and for operating in close quarters where the space will not admit a jack with a larger base. The valves are so arranged that these jacks will operate in horizontal, inclined or vertical positions. To secure the best results a fluid consisting of one part grain alcohol and two parts water should be used, adding one ounce of sperm oil to amount necessary for one jack.

Claw Hydraulic Jacks

The claw on this style jack, being very close to the ground, is intended for raising loads that are not of sufficient height to admit the head of jack. The valves are so arranged that jack will operate in horizontal, vertical or inclined position. When a jack is not in continual service, it is well to pump it up occasionally to keep the valves and leathers in working condition. In ordering repairs, give capacity of jack as well as shop number stamped on lever socket.

Broad Base and Low or Horizontal Hydraulic Jacks

Broad Base

Low or Horizontal

The increased area of base of the broad base jack gives it a solid foundation where steadiness is required. The 40, 50 and 60 ton jacks are all steel.

The horizontal or low jacks are so called because they will run out as far horizontally as vertically and are about five inches lower than regular style jacks of equal capacity.

"Dunn" Extensible Trench Braces

Absolute insurance against cave-ins. The ends or shoes have lugs and are fastened on ball and socket joints which immediately assume the angle of the planking and take a firm bearing. Costly cave-ins—always a possibility, where plain timber struts are used—are thereby absolutely prevented. All malleable iron except screw and piping.

Quickly screwed in position, as the double thread is of steep pitch and accurately machined of wrought iron. Wide range of adjustment permitted by the long screw.

Standard Complete Brace with 1½ Inch Screw and 1½ Inch Pipe

Number of Brace.....	No.	40	41	42	43	44	45	46	47	48

Length of braces are listed overall and when closed. Take extreme width of trench, deduct for planking on both sides (usually about 8 inches) and several inches more for variation in width of cut—the remainder will give length of brace wanted—the screw being extended to tighten the brace into position.

"Dunn" Brace Fittings

Complete Ready for Pipe to be Attached

Standard wrought pipe is required for the barrel, no machine work required except drilling a hole for ¼ inch cotter pin ½ inch from one end, cut pipe 7 inches shorter than length of complete brace wanted, when closed. Longer or shorter pipe may be substituted at any time to suit width of trench.

Explosives and Blasting Supplies

Dynamite

Dynamite is a high explosive, commonly used in mining and quarrying operations, excavating and moving earth, breaking log and ice jams and improving agricultural lands.

It consists of an absorbent saturated with nitroglycerin, packed in paper cartridges 8 inches long and 1 to 5 inches in diameter. The cartridge is dipped in paraffin to render it substantial and packed in 25 to 50 pound wooden cases.

There is a grade and strength of dynamite adapted to every blasting operation. **Nitroglycerin** or "Regular" is the original dynamite grade and is suitable for work requiring a quick, shattering blow.

Gelatine Dynamite is a plastic, waterproof explosive adapted to submarine work, wet quarry blasting, tunnel excavations and difficult, hard rock blasting where water is encountered.

Low Freezing Dynamite is less sensitive to cold than the other grades and eliminates much of the thawing required when using them. This grade is rapidly becoming the favorite all around explosive.

Contractors' Powder is a special honeycombed gunpowder to which a small percentage of nitroglycerin has been added. It has a pushing or lifting effect and some of the shattering force of dynamite. Used for moving earth, clay and material too soft and yielding to be removed economically with dynamite.

For earth blasting, excavating and soil blasting use 20 to 30% dynamite.

For stumps, boulders, ordinary rock and all around work use 40% dynamite.

For hard rock, tunnel driving, well digging and ditching use 60% dynamite.

The **standard grade** acts with a heaving or pushing effect.

The **nitroglycerin** grade delivers a quick shattering blow.

The **gelatine grade** is quick, plastic and practically waterproof.

The **low freezing grade** is an all around explosive, not easily affected by cold weather.

Nitroglycerin Dynamite

Strength.....	25%	30%	40%	50%	60%
Price, per pound.....	\$0.34	\$0.36	\$0.38	\$0.42	\$0.46

Gelatine Dynamite furnished in 35% to 75% strength only, at above prices.

Low-Freezing Dynamite

Strength.....	20%	30%	40%	50%	60%
Price, per pound.....	\$0.32	\$0.34	\$0.36	\$0.38	\$0.40

Contractors' Powder, packed in strong paper bags, 12½ lbs. each, 4 bags in a case. Price, per pound.....\$0.14

An interesting booklet giving full instructions and information relative to dynamiting will be sent on request.

Blasting Powder

The advantage of black blasting powder over high explosives for blasting soft materials, is that it exerts a strong push, rather than the blow of a high explosive. This renders it very valuable for quarries, coal mines, etc., where it is desirable to obtain the material in large blocks.

Price per 25-lb. keg for sizes FFFF, FFF, FF, F, C, CC and CCC.....\$3.00

H.Channon Company Chicago

Blasting Caps

Made of a copper tube, about $\frac{1}{4}$ inch diameter and $1\frac{1}{2}$ inches long, closed at one end and containing a small charge of fulminate of mercury, and exploded by a small spark from burning fuse. They are sure fire and reliable. We recommend the use of a No. 6 cap or stronger. A strong cap will develop more force from the blast and greater efficiency from the dynamite.

Number	5	6	7	8
Price per 1000	\$23.50	\$27.80	\$16.00	\$47.50

Safety Fuse

Used for firing blasting powder directly by its spark from the burning powder coil; also for firing dynamite through the medium of a blasting cap, which is exploded by a spark from the burning fuse.

Price Per Thousand Feet

Cotton for use in dry ground	\$ 9.50
Single Tape for use in wet ground	10.50
Anchor Brand for ordinary work	12.30
Double Tape for use in very wet ground	12.50
Triple Tape for use in water	15.30

Anchor Brand is a well made, durable fuse, finished in white. A favorite with blasters for ordinary work. Burns at the rate of about three feet per minute.

Electric Detonators

An Electric Detonator is a copper tube about the size of an ordinary blasting cap, containing a charge of fulminate, and the ends of two copper wires connected by a fine platinum wire, or "bridge" surrounded by gun-cotton. The electric current burns out the fine platinum wire and flashes the gun-cotton which sets off the fulminate. The explosive charge in Electric Detonators is the same as in Blasting Caps.

Detonators with wires from 4 to 14 feet are packed in cartons containing 50.

Detonators with wires from 16 to 30 feet are packed in cartons containing 25.

10 cartons in a wooden case.

Price Per 100

Length of wire feet	4	6	8	10	12	14	16
No. 6 Double Strength	Prices upon application.						
No. 7 Triple Strength	Prices upon application.						
Length of wire feet	18	20	22	24	26	28	30
No. 6 Double Strength	Prices upon application.						
No. 7 Triple Strength	Prices upon application.						

We recommend the use of a No. 6 Electrical Detonator. It means increased efficiency in the blast.

Blasting Machines

Lion Brand

The Lion Brand Blasting Machine is a small dynamo operated by hand, put up in convenient shape for carrying around the field. The machine is in a compact wooden case and is operated by pushing down a plunger which makes the dynamo revolve, supplying the current for firing several blasts.

The machines will last for several years with care. Blasting machines are rated according to the number of holes they will fire at once.

No. 1 will go good work on the farm or well digging.

No. 3 is a general favorite with blasters. It is small enough to pack around easily, and powerful enough for all ordinary work. The average blaster seldom needs to fire more than 25 charges at once.

No.	Capacity, Charges	Height, Inches	Weight, Pounds	Price Each
1	8 to 10	11	18 $\frac{1}{2}$	\$24.00
3	20 to 25	13 $\frac{1}{2}$	22 $\frac{1}{2}$	36.00
4	30 to 50	18	45 $\frac{1}{2}$	70.00
5	50 to 100	20 $\frac{1}{2}$	66 $\frac{1}{2}$	110.00

Blasting Sundries

Leading Wire for connecting detonator to blasting machine. In 500 foot coils. Weight per coil 2 lbs. Price per coil.....\$12.50

Connecting Wire for connecting charges for simultaneous discharging. In 2 lb. spools of 500 feet. Price per pound.....\$1.50

Rubber Insulating Tape. Makes joints waterproof. Can be used under water. $\frac{3}{4}$ inch wide in $\frac{1}{2}$ pound rolls. Price per roll.....\$0.75

Friction Tape. Used alone or in connection with rubber tape under water. $\frac{3}{4}$ inch wide in $\frac{1}{2}$ pound rolls. Price per roll.....\$0.50

Cap Crimpers. Price each.....\$0.35

IMPORTANT

Dynamite, caps or powder cannot be shipped with hardware or other goods, neither can they be shipped by express. When entered on order with other goods, we will ship direct from nearest magazine. Shipments of 200 pounds dynamite, or more, will be delivered to any point on the line of transportation companies accepting high explosives. Shipments of less than 200 pounds f. o. b. nearest distributing point.

Tools for blasting purposes such as stone drills, earth augers, chisels, etc., are listed elsewhere in this catalog. See index.

Contractors' Heavy Plows Railroad or Grading Plows

The standard, mould-board and point of this plow are made of extra quality wrought steel. The mould-board and point are made of the best, plow steel and both double shinned. The handles and beam are of the best second growth hardwood, with hand holds of solid steel. Plows Nos. 101 and 103 are provided with a heavy improved steel shoe or runner upon the side to protect the handles when plow is dragging. The principle strain is carried by heavy steel draft rod underneath the beam and the entire plow is constructed to withstand the very hardest usage.

No. 106.	Horses required	2 to 4; cuts 10 inches; weight 150 pounds, price each	\$45.00
No. 105.	Horses required	4 to 6; cuts 10 inches; weight 175 pounds, price each	48.00
No. 101.	Horses required	6 to 8; cuts 12 inches; weight 228 pounds, price each	57.00
No. 103.	Horses required	12 to 14; cuts 12 inches; weight 290 pounds, price each	79.00

Extra Plow Points

No. 6.	For No. 106 plow; weight 24 lbs., price each	\$10.00	No. 1.	For No. 101 plow; weight 45 lbs., price each	\$13.00
No. 5.	For No. 105 plow; weight 24 lbs., price each	10.00	No. 3.	For No. 103 plow; weight 50 lbs., price each	14.00

No. 15 Township Plow

No. 15 Plow will run perfectly steady in all kinds of ground and is very light draft for two horses, but is frequently used with four. Cuts a furrow 10 inches wide and from 6 to 12 inches deep, as desired. Beam is made of specially selected plow beam stock, length 6 feet, 2 inches

and 3x5½ inches at standard. Iron hand-holds Wrought iron clevis, with two heavy rings as shown in illustration and patent reversible cutter.

No. 15 Plow. Weight 145 pounds, price each...\$39.70
Plow Points. For No. 15 Plow, price each... 10.00

For heavy railroad work and grading, the Rail-roader is one of the finest plows built. It is especially intended for the hardest kind of work. Fitted with steel mould-board, steel share and cast steel land-slide, steel coulter and adjustable gauge shoe; a very heavy iron beam, second growth white oak handles, ironed and braced. Provided with draft rod from clevis to rear end of beam. Furrow capacity 9x14 inches. A clevis and wrench are provided with each plow. The Railroader is hand made throughout and for the purpose intended cannot be excelled. Weight 210 lbs.

No. 26. Railroader Plow, price each...\$42.00
Extra Plow Points. Price each... 6.00

No. 26 "Railroader" Plow Hand Made Throughout With Adjustable Gauge Shoe Furrow Capacity 9x14 In.

No. 29 "Bulldog" Rooter or Hardpan Plow Weight 319 Pounds

The No. 29 "Bulldog" Rooter Plow is strong and substantially built. It is very heavy and is designed for tearing up turn-pikes, cobblestones, macadam pavements and the hardest hard pan-work. It has a cast iron beam, crucible steel adjustable and reversible point, which also serves as a shoe,

white oak handles, iron bound and braced and adjustable gauge shoe. This plow is warranted to give satisfaction. Clevis and wrench are included in price. Weight 319 pounds.

No. 29. Bulldog Plow, price each...\$52.00
Extra Plow Points. Each 5.00

Channon Improved Wheeled Scraper

Square Box—Western Pattern

Much more material can be carried a greater distance by the Channon Improved Wheeled Scraper, often at no more expense than with the ordinary drag scraper and always at less expense per cubic foot of material handled. The No. 1 size can be loaded and dumped by one man and two horses pull it up an incline almost as easily as a drag scraper, while the No. 2 (the most popular size) sometimes requires two men for filling, but can always be dumped by one man. Two men are required to fill the No. 3, but one experienced scraper man can dump it. One team pulls and dumps any of the three sizes. A snatch team is necessary for loading the No. 3 size, and when the material is very heavy with the No. 2.

Channon Improved Square Bowl Steel Scraper is the best of its type on the market. It has strong wood wheels provided with malleable iron hubs, which are sand proof and can be replaced. Bowls are made from single sheet of high carbon steel.

No. of Scraper	Price Each	Dimensions of Box, inches				Diameter of Wheels	Size of Tires, inches	Track Gauge, inches	Capacity, cubic feet	Approx. Weight, pounds
		Length at Bottom	Width at Back	Depth at Back	Depth at Front					
1	\$45.00	36	36 1/2	12 1/4	11 1/4	3 ft. 2 in.	2 1/2 x 1 1/4	53	9	490
2	50.00	36 1/4	38 1/4	13 1/2	12 1/2	3 ft. 4 in.	3 x 3/8	56	12	690
2 1/2	53.00	39 1/4	38 1/4	13 1/2	12 1/2	3 ft. 8 in.	3 x 3/8	56	14	760
3	55.00	41 1/2	44	15	14 1/4	3 ft. 10 in.	3 x 3/8	61 1/2	16	835

Flat Board Scraper

The peculiar shape and attachment of the curved draw bars make this scraper very easy to operate. It is built of heavy lumber, bolted together with all wear points fully protected.

No. 42 Scraper, width 48 inches, weight 75 pounds. Price Each.....\$12.00

No. 1 Tongue Scraper and Ditcher

For making and leveling roads, cutting and cleaning, irrigation and other large ditches. Well adapted to moving dirt short distances. Cut of scraper is regulated by length of chain as desired to suit material being worked.

Box and handles of well seasoned lumber.

Quarter-inch steel blade, 4 inches wide, 48 inches long. Shoes and drawers of steel. All points of wear well protected.

No whistle trees or yoke furnished with scraper.

Price Each.....\$16.00

Easy Dump Box

There are no complicated parts and any blacksmith can make repairs. Shipping weight about 500 pounds.

No. 1.	Capacity 1 cubic yard.....	\$80.00
No. 1 1/2.	Capacity 1 1/2 cubic yards.....	\$85.00
No. 2.	Capacity 2 cubic yards.....	\$95.00

Fits any form gear and regular teaming gear that has a 7-foot wheel base.

Box capacity is 1 cubic yard, which is flared to make 1 1/2-yard or 2-yard capacity. It will fit any width between stakes; 38, 40, 42 or 44 inches. Easy to dump. Any boy that can handle a team can dump this box.

Bottom construction allows this dump to sit lower on the gear than any other dumper. Handles stone, dirt or sand equally well. Hinge on side gives full width of opening for quick dump. Foot release—driver does not stop or lose control of his team.

Can be shipped knocked down or set up.

Contractors' Light and Heavy Dump Carts

Dirt Tight, Strong, Substantial, Durable

These carts are especially suitable for hauling rock, gravel, clay or other heavy material. They are made of hardwood lumber and are thoroughly braced and bolted throughout. The framing consists of heavy side and cross sills, each side-board being secured to its sill by four anchor bolts. The front of the bed is bound together by two heavy tie-rods, which also pass through cross cleats on the front end-gate, securing the latter in place. The front end gate is fitted between heavy strips on each side board, and, by withdrawing the bed tie-rods, is removable. The side boards are iron braced on the rear. Note the solid rear framing. Side sills are not weakened by galling at the points of connection with cross piece. These joints are firmly bolted, and further tied by extensions of the iron with which the ends of the sills are shod.

Heavy Cart.—Capacity 24 cu. ft., inside dim.: Leng. 67 1/2 x 44 x 12 in., deep; diam. wheels 54 in., wt. 934 lbs. Price each.....\$110.00

Light Cart.—Capacity 21 cu. ft., inside dim.: Leng. 66 x 44 x 12 in., deep. Diam. wheels 54 in., wt. 705 lbs. Price each.... 95.00

Prices are F. O. B. factory in Ohio.

Channon Solid Steel Drag Scraper

- The "Channon" is the strongest slip scraper made, and the easiest on the operator and horses. The bowl is stamped from a single sheet of specially rolled, high-carbon steel plate which gives the longest wear, even under the roughest conditions. It is without lap, seam, joint, angle or sharp corner. No bolts, braces or stay rods of any kind are used. The handles are strongly riveted to the top edge of bowl and the bail which is of steel is fastened to the sides. The bottom is provided with steel runners which greatly prolongs the serviceability of the scraper. This scraper will work in practically any kind of soil whether plowed or not and "scours" nicely. The shape of the bowl gives it great strength combined with large capacity. Being of uniform width throughout it fills easily with minimum draft.
- No. 1. Capacity 7 cubic feet. Used for long hauls or down grade. Size of bowl, top of back to cutting edge, 34 inches; width 33 inches; depth 10 inches; weight about 105 pounds. Price each.....\$11.00
- No. 2. Capacity 5 cubic feet. For all ordinary grading work. Size of bowl, top of back to cutting edge, 31½ inches; width 29½ inches; depth 9½ inches; weight about 97 pounds. Price each.....11.25

The "Boss" Drag Scraper

The "Boss" Drag Scraper is stamped to the same special shape as the "Channon" and is a high grade scraper in every way. Among its points of superiority over other drag scrapers are: Even distribution of wear over entire bottom, light draft at filling, large capacities and great strength of form. Bowl is made of the same special steel as the "Channon" Scraper bowls.

The main difference between the "Boss" and the "Channon" Scraper is in the way the handles and bail is attached to the bowl, as is clearly shown in illustration. The "Boss" is equipped with steel bottom runners.

- No. 1. Capacity 7 cu. ft.; dimension same as "Channon"; weight about 95 lbs. Price each.....\$11.00
- No. 2. Capacity 5 cu. ft.; dimensions same as "Channon"; weight about 87 lbs. Price each.....10.50

The Victor Drag Scraper

The "Victor" is a double bottom, square back slip scraper. Bowl is made from a single sheet of steel, formed cold. It is provided with an extra heavy ball, double at center to form a swivel bearing, extra bar being heavily riveted to bail.

It is furnished only with an extra heavy pressed steel double bottom. The front of the bottom plate is ground to a blade edge the same as the scraper cutting edge. The rivets attaching it are through the flanges so that all rivet heads are protected from wear.

- No. 1. Capacity 5½ cu. ft.; weight about 105 lbs. Price each.....\$11.00
- No. 2. Capacity 4½ cu. ft.; weight about 95 lbs. Price each.....11.20

Heavy Pressed Steel "Ox Shovels"

These scrapers are not intended for regular railroad grading with ordinary team. They are drawn usually by locomotive and are used for ditching along railroad tracks. They are equipped with extra heavy steel ball as shown in illustration, and also steel bottom runners. These Ox Shovels are of the same construction as the "Channon" Drag Scrapers, being stamped from a solid sheet of specially rolled steel.

- No. 0. Capacity 10 cu. ft.; size of bowl, top of back to cutting edge, 34 in.; width 35 in.; depth 11½ in.; weight 135 lbs. Price each.....\$25.00
- No. 00. Capacity 13 cu. ft.; size of bowl, top of back to cutting edge, 37 in.; width 35 in.; depth 13½ in.; weight 191 lbs. Price each.....\$48.00
- No. 000. Capacity 17 cu. ft.; size of bowl, top of back to cutting edge, 44 in.; width 43 in.; depth 16 in.; wt. 262 lbs. Price each.....58.00

Improved Buck Scrapers—Fresno Type

The "Buck" Scraper is used in road building, irrigation leveling, railroad construction, in fact, for practically all work in which the ordinary drag slip scraper can be used. On account of their large capacity, they are especially recommended for use in loose or sandy soil and for leveling land for irrigating purposes. Its capacity is from 12 to 18 cubic feet, depending upon the size. With two large or four ordinary horses, one man can move up to 150 and 200 cubic yards in ten hours.

Although adapted to all work in which the ordinary drag scrapers are used, the "Buck" has a great advantage in the distribution of the load in dumping. It may be adjusted to distribute the load in layers ranging in depth from 1 to 12 inches, leaving the surface of the embankment in perfect condition. The draw bars are attached by means of adjustable clevises, the position of which regulate the thickness of the load distribution.

These scrapers are made of very heavy, specially hardened steel plate securely joined. The top edge of the body plate at the back is stiffened by a strong angle which is riveted along its entire length.

- No. 1. Capacity 18 cubic feet. Cutting edge 5 feet. Approximate weight 308 pounds. Price each.....\$37.00
- No. 2. Capacity 14 cubic feet. Cutting edge 4 feet. Approximate weight 249 pounds. Price each.....35.00
- No. 3. Capacity 12 cubic feet. Cutting edge 3½ feet. Approximate weight 236 pounds. Price each.....32.00

H. Channon Company Chicago

Monarch Full Bolted Railroad Wheelbarrows

Well bolted barrow of selected hardwood. The bowl is full size, bent, planed, cleated and strapped together. Bottom boards are tongued and grooved and tied together with steel staples. The legs serve as extra braces to the bowl, **running upward the full length and bolted securely with four bolts.** Wood cleats extend down front of tray to the handles, with iron braces in place of quarter blocks. Wheel revolves true and evenly on a fixed 2-inch axle bolt. Wheel is of heavy steel, 16½ inches in diameter, with ⅝-inch round spokes, and a 1½ x ¼ inch tire. Weight 588 lbs. per dozen.

Price per dozen.....\$41.00 Price each.....\$4.00

Bent Handle Stone Barrows

Made purposely for heavy work, such as stone or pig iron use. Built of selected hard wood, well ironed and bolted. Exceptionally strong handles braced thoroughly. The handles are 5 ft. 10 in. long. Cross pieces at legs 2 x 3 inches. Bottom 11 inches thick by 26 inches wide by 25 inches long. Dashboard 9½ inches high supported by strong braces of wood and iron. Legs supported by extra heavy cross-piece. Furnished with Patent Steel Spoke Wheel, 16½ inches diameter; tire 1½ x ⅝ inches. Axle bolt ½ inch. Weight 76 lbs.

Price, per dozen, with steel wheel.....\$100.00
Price, each.....10.00

Brick Barrows With Tight Bottoms

In every brick or tile yard will be found a wheelbarrow of this type as it is especially adapted for handling green brick. It is built of selected hardwood, air seasoned, well braced and substantially made throughout. Its construction and material combined make it one of the strongest barrows made. It is built for hard usage.

Handles 58 inches long Dash 24 inches wide, 18 inches high. Legs 15½ inches high. Wheel 19 inches in diameter. Tire 1½ x ⅝ inches. Bottom 24 inches wide. Axle bolt ½ inch. Painted dark blue, wheel black. Weight 67½ lbs. Shipped knocked down. This barrow is carried in stock and can be shipped promptly. Furnished with steel wheel only.

Price, per dozen.....\$100.00
Price each.....10.00

No. 114. Tight Bottom, Steel Wheel

Folding Wooden Barrows

Removable Side Boards, Double Frame

These barrows are made of carefully selected seasoned hardwood and consist of a double frame firmly bolted. Can be easily knocked down and folded flat for shipping purposes by merely removing the axle bolt and two nuts, thereby securing the lowest rate of freight. Set up in a minute. Mostly used for stable and garden work. The bed measures 11 x 17½ at front by 21½ at rear by 32½ inches and has a capacity of 3¼ cubic feet. Steel leg braces, bent under leg to form broad shoe, which serves to protect sod. Steel axle bearing clips. Made with steel wheel only. Length of handle 5 ft. Approximate weight per dozen 588 lbs. Each, 49 lbs.

Price per dozen.....\$80.00
Price each.....8.00

Also made in a larger size.

Easily knocked down and quickly set up

Bullock Steel Tray Wood Frame Barrows

An excellent barrow for street paving and general use. Exceptionally well made, with iron braced wooden legs.

The tray is formed from the best grade of heavy steel, and is pressed from a single sheet, without joint seam or rivet. The tray flange is turned over a $\frac{1}{4}$ inch steel rod. This prevents breaking and bending of the edges. Much stronger than any riveted barrow can be. Has steel axle bearing clips and steel wheel $18\frac{1}{2}$ inches in diameter; spokes $\frac{3}{8}$ inch round; tire, $1\frac{3}{8}$ by $\frac{3}{8}$ inch; axle, $\frac{5}{8}$ inch. Weight, each, 60 pounds; per dozen, 720 pounds.

Greatest length of tray, 2 ft. 9 in. Greatest width of tray, 2 ft. 7 $\frac{1}{2}$ in. Depth at wheel end, 9 $\frac{1}{4}$ inches. Depth at handle end, 6 $\frac{1}{4}$ inches.

Price, per dozen.....\$75.00
Price, each.....7 50

Channon Contractors' Barrow

The "Channon" contractors barrow No. 2B is designed to serve the double purpose of general utility work in wheeling sand and gravel as well as handling batch or semi-liquid material. Especially adapted for hauling concrete in street work. The tray is placed on "risers" which hold it practically level in wheeling. The wheel is placed well back under the load. The increased leverage gained in this manner makes the wheelbarrow much more easily handled. It also has the steel tipped handle extension for dumping over the wheel. Strongly built frame equipped with angle iron legs and braces. Knocks down completely for shipping and is easily set up. Tray, 2 ft. 4 $\frac{1}{2}$ in. by 2 ft. 11 $\frac{1}{2}$ in.

Price, per dozen.....\$90.00
Price, each.....9 00

Channon Concrete and Mortar Barrow

The shovel shape adds a very practical advantage to this tray. A pouring channel is so formed, which deposits flowing material in compact form at the exact point desired. On account of the narrowness of this tray it is easily dumped to either side, and can be handled conveniently in narrow passages. The extra low drop of the axle admits of placing the wheel well under the load so that large loads can easily be handled. The tray will hold 2 cubic feet of wet concrete or 6 cubic feet of dirt, which is about all one man can wheel. Size of tray, 57 $\frac{1}{4}$ inches by 24 $\frac{1}{2}$ inches; depth at front, 13 inches; depth at back, 8 $\frac{1}{4}$ inches; length of slope at front, 19 $\frac{1}{4}$ inches.

Price, per dozen.....\$95.00
Price, each.....9 50

No. 3 Steel Tray Wood Frame Wheel Barrows

This tray is built of the same material and in exactly the same manner as the one above, and will also permit of both side and forward dumping. These barrows while much lighter than those having iron frames, are equally as strong for all practical purposes and will stand the roughest usage. The frame is strongly built of seasoned hardwood lumber and well finished. Used mostly for earth, sand, cinders, ore, coal and coke. Wheel axle is held stationary by steel axle clips. Weight, each, 64 lbs.; per dozen, 768 lbs. Tray, 41 $\frac{1}{2}$ inches by 33 inches.

Price, per dozen.....\$95.00
Price, each.....9 50

Channon Tubular Steel Barrows

Seamless Pressed Steel Trays with Wheel Guards

Nos. 4 and 5

No. 10

The tubular iron which passes around in front and protects the wheels, also serves another purpose. When it is desired to dump forward or over the wheel, the piping will act as a rest upon which to tip the barrow. The piping is not weakened at any point by bolt or rivet. These barrows cannot be equalled for hauling coal or coke and for all general purposes. The tray flange is turned over a $\frac{1}{4}$ -inch steelrod, which passes around the tray, giving a smooth finish to the edges. This prevents breakage and greatly increases the strength. The spokes are secured in the flange against the hub and are held firm by a head on the outer and a shoulder on the inner side of the tire. It cannot come off. All wheels turn on malleable iron fixed axle bolts. The No. 4 barrow differs only from the No. 5 in the size of bowl. See table of specifications below.

No.	Gauge of Steel in Tray	Length on Top	Width on Top	Depth at Wheel	Depth at Handle	Greatest Height	Cubic Capacity	Weight	Price per Dozen	Price Each

Forward Dump Barrow

This type of barrow is especially designed for "wheeling in" coal at residences and apartment buildings as it is made narrow for getting through gates and between buildings. Also tapered at mouth for dumping into windows.

This barrow has a large capacity, carries the load on the wheel and is exceptionally well balanced. It dumps easily and the wheel guard prevents running back in dumping.

No.	Price Each	Width at Mouth, Inches	Width at Back, Inches	Capacity Anthracite Coal, Pounds
550A	\$16.00	20	28	250
550B	17.00	22	30	300

THE CHICAGO CONCRETE CART

Capacity 6 cu. ft.

One of the chief features of this cart is easy handling. The wheels, which are of exceptionally large diameter (36 inches), have crown faced tires for easy turning on soft ground, etc., where ordinary flat face tires are apt to grind.

The handle is made of one piece round bar. It is securely bolted to side stiffening angle and is perfectly rigid.

The bowl is of large capacity with axles bent around the bottom, making an additional support.

The sides of bowl are stiffened at top by heavy angles. The lip of bowl is stiffened and protected by a heavy bar.

Wheels have staggered spokes, which are shouldered and headed in tire. Axles are of 1 1/4-inch cold rolled steel. Axle box is replaceable.

Width inside, 20 inches. Length inside, 38 1/2 inches. Greatest depth, 20 inches. Tread 32 1/4 inches. Wheels, 36x2 1/2 inches. Weight about 204 lbs. Price each, \$36.00

TWO WHEELED BARROW—For Coal or Ore and Smelter

Built in two models, one for coal or ore and the other for smelter. The method of construction in these two barrows is identically the same with the exception of the wheels. Built especially for foundry and coal yard use. The Smelter barrow has stronger wheels throughout. An extra tire 2 1/4 x 3/8-inch is shrunk on over the wheel, the tray is 44 inches long, 32 1/2 inches wide at the back, and 39 1/2 inches wide at the front. Its greatest depth is 16 1/2 inches. The bottom and front of the tray are made of No. 10 steel while the sides are No. 12 steel. Handles are 1 1/4-inch pipe. The axle is 1 1/2-inch square by 38 1/2 inches. Legs 1/2-inch by 1 1/2 inches, braced by strips 1/2 x 1 1/4 inches. Its capacity, level full, is 8 cubic feet and it weighs approximately 275 pounds. Price, each, \$40.00

STEEL CHARGING BARROWS

For Limestone, Ore, Coal or Coke

Especially adapted for charging blast furnaces, also for use in gas works, boiler rooms, on coal docks or brick yards. Easiest running heavy charging barrow made. Has anti-friction steel ball bearings. Very easily handled by one man when loaded to its fullest capacity with any material not heavier than iron ore. Very easily dumped. Built of the best No. 10 and 12 gauge steel and heavily bolted throughout. Tire 2 inches wide and 3/4-inch thick. Will carry approximately 1,500 pounds iron ore; 500 pounds coal.

No. 1 is the popular size.

LOCOMOTIVE COALING BARROW

One Ton Capacity

Simplifies the handling of coal so that one ton can be easily handled by one man. Roller bearings and its sturdy balanced construction make this possible. The steel coal box is 9 feet long, 30 inches wide and 2 feet and 6 inches deep, giving it a capacity of 30 cubic feet or one ton. The bottom plate is 1/4-inch No. 10 gauge steel, the sides 1/4-inch No. 12 gauge steel. All plates are connected by angle iron, insuring rigidity and durability especially to the spout, which in addition to the regular angles has two short ones running from the bottom up on the outside of the spout and serving as bumpers. Exceptionally well braced and bolted throughout to stand the hardest usage. The wheels are 44 inches in diameter, 3 by 3/8-inch tire and has dust proof ball bearings. Wheel turns on 2-inch square steel axle with 4-inch drops. 14 cold drawn steel rollers 1/2 x 4-inch in each bearing. The swivel wheel is 9 inches in diameter. Handles 2-inch square steel with 4-inch drops. Price, each, \$140.00

"Triangle Mesh" Woven Wire Concrete Reinforcement

Fig. 8—4-inch Mesh
Made Galvanized and Plain

Low cost of installation and inspection—easily handled and stored on the work. Has high elastic limit.

Safety First

Provides a perfect mechanical band and even distribution of the steel reinforcing in every direction—the tension or carrying members are accurately spaced.

Triangle mesh reinforcement is the only design of woven wire fabric in which the cross or diagonal wires assist the longitudinal or tension members in carrying the load.

Made with either solid or standard longitudinal members, properly spaced by means of diagonals or cross wires so arranged as to form a series of triangles between the longitudinal or tension members; the longitudinal members being spaced 4 inches apart, the cross wires either 4 or 8 inches apart, providing either a 4-inch or 8-inch mesh. The sizes of both wires are varied in order to provide the cross sectional areas of steel required to meet the condition.

Triangle mesh provides a more even distribution of the steel, reinforcing in every direction. The tension or carrying members are accurately spaced. Provides a perfect mechanical band. When a specific size of fabric or area of steel is specified, it is impossible to leave out any portion of the reinforcement. Has an absolute continuous action from one end of the structure to the other and distributes the stresses, due to a concentrated load, over a greater area.

Note.—Material may be furnished either plain or galvanized. Unless otherwise specified, shipments will be made of material not galvanized.

Eclipse Steel Wire Screens

For Screening Coal, Coke, Sand and Gravel

The wire used in these screens is of superior quality, drawn and tempered. Cloth or bottom is an extra heavy grade, the wires being double crimped, thus eliminating chances of slipping or sagging. Frames are made of thoroughly seasoned oak, strongly constructed and ironed at points of strain. Heavy pieces of iron are put over the cloth at top and bottom so that the wood will not be worn out by the material being screened.

All metal parts are japanned to prevent rusting. The foot board and leg are convenient attachments, the former elevates the screen so that a quantity of material can be run over before shoveling away and prevents the large pieces from mixing with the screenings. It also forms a solid body to shovel against. The leg is thoroughly braced and movable so the screen can be adjusted to any height required. When screens are furnished without the foot board and leg they are provided with a cleat fastened to the back at the top, so that screen can be rested

Plain Screen. on a board.

When ordering always be sure to state the size mesh wanted. By mesh is meant the number of openings per lineal inch. All meshed furnished at the same price.

No. 10. Plain Screen. Extra size, 34x76 in. Weight \$15.00
about 101 pounds. Price each.

No. 20. Plain Screen. Regular size, 31x69 in. Weight \$12.00
about 86 pounds. Price each.

No. 1. Screen with Foot Board and Leg. Extra size, 34x81 in. Weight 118 lbs. Price each \$17.25

No. 2. Screen with Foot Board and Leg. Regular size, 31x74 in. Weight 106 lbs. Price \$14.25

Challenge Screen

The frame of this screen is made of well seasoned oak, nailed together. Screen is steel wire, double crimped and japanned to prevent rusting. The screen is not equal to the Eclipse Screens nor as economical to use, but is equal if not superior to the average screen offered at the same price. If desired, we can furnish this screen with bolted frames for \$1.00 net extra. Weight about 70 pounds.

Challenge Screen. Size 29x71 inches. Price \$7.50
Any mesh furnished. State which is wanted in order.

The Drendul Sand Screen

This screen is constructed on a novel principle which insures maximum durability. There are no small wires to wear out quickly,

leaving the screening surface loose and uneven. The heavy parallel wires are looped to pass through slots punched in narrow strip of sheet steel. Supporting rods are passed through loops at the back, holding wires firmly in position. At the top and bottom, wide steel plates are connected in the same manner. Frame is made of first class lumber.

Large size, 26x66 inches. Weight 42 lbs. Price each \$7.50

Small size, 22x60 inches. Weight 35 lbs. Price each \$6.00

Furnished from stock in 2, 3, 4 or 5 mesh. Two mesh has $\frac{3}{8}$ -inch space between wires, 3 mesh $\frac{1}{2}$, 4 mesh $\frac{5}{8}$ and 5 mesh $\frac{3}{4}$ space.

No. 24. Without Foot and Head Board, size 24x57 inches. Complete for car use. Weight each about 60 lbs. Price each \$13.50

No. 25. With Foot and Head Board, size 24x57 inches. Complete for car or yard use. Weight each about 75 lbs. Price each \$14.25

The "Climax" combined car and yard screen is substantially constructed and at the same time weight has been kept down as much as possible. Double crimped steel cloth is used and the frame is of hardwood covered with heavy sheet iron where the coal rolls down. The sides are strengthened with iron braces.

For car use the clamps are secured to the side-board and the iron leg adjusts it to the required incline, holding the screen firm and independent of the wagon. If it is required to screen from a box car, it can be secured to the grain door; for yard use the clamps are secured to the foot board, and the head board is fastened in position. Screen may be placed at any required incline and clamps secured so that the foot board is always vertical, thus insuring a firm surface to shovel against.

Handy Screens

The Handy Screens are intended for use in yards where there is but occasional need for them for screening ashes, sand and gravel. Frames made of clear spruce, well put together and braced with sheet iron. The cloth is a medium grade of steel wire, single crimped, japanned in the Nos. 6 and 7 and galvanized in the Nos. 9 and 10. We recommend screens with the Galvanized Screens as they are stronger, will not rust and meshes cannot slip as the wires are soldered at the crossings.

No. 6. Small size, 25x62 inches. Steel wire, japanned. Weight 33 lbs. Price each \$6.00

No. 7. Large size, 28x66 inches. Steel wire, japanned. Weight 37 lbs. Price each \$7.50

No. 9. Small size, 25x62 inches. Steel wire, galvanized. Weight 33 lbs. Price each \$7.50

No. 10. Large size, 28x66 inches. Steel wire, galvanized. Weight 37 lbs. Price each \$9.00

The following meshes are carried in stock, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, $\frac{1}{2}$ and 1-inch. Be sure to state which is wanted.

Hercules Steel Warehouse Trucks

Easy running, strong and durable; for railroads, steamships, general warehouse and all heavy service. Constructed of the very best steel. Frames and axles made of steel and wheels of very best quality iron. The angular shapes combine extraordinary strength and lightness. All parts are bound and riveted together, making an exceptionally strong and rigid frame. Handles are first class hickory, strong and pleasing to the hands. Fully warranted against any imperfections in material and workmanship.

No. 3 Regular: For general work, medium heavy.

No. 4 Regular: For all purposes where a large truck is required.

No. 4A: Extra heavy; center straps, welded to dash; for hard service.

"Favorite" Factory Truck

One of the most popular types we sell. Just right for a general purpose truck.

The high wheels on this truck enable it to be moved around very rapidly and the swivel casters on each end allow it to be turned completely around in a very small space. The entire area of the platform is available for load, the heavy iron stake pockets being set out over the frame. Four $\frac{1}{2}$ -inch iron rods pass across frame and rigid through the iron pockets, making truck strong and rigid by $\frac{1}{2}$ inches hardwood, strongly assembled; platform 1-inch hardwood, dressed; stakes 30 inches high, removable. Illustration shows truck No. 2. No. 3 has two casters at each end.

Channon's Improved Truck

Fig. 500

For Grocers, Mills, Factories, Warehouses, etc. Built strong and substantial.

This truck is especially adapted to the needs of merchants, millers, warehouse men and also used in factories and depots. Can be made to fit scales or elevators, thus doing away with transferring the load. The front wheels being casters truck will turn in its own length and can be run on scale or elevator at any angle. One man can handle nearly twice as much with this truck as the bulk of the weight comes over the wheels which are of large diameter. The caster wheels in front enable the operator to turn the truck in any direction with ease. For making up orders or unpacking shipments, this truck is indispensable. Regularly furnished with iron wheels, but rubber tires can be furnished if so desired, at extra price. This truck can be made in any size to meet special requirements; also with boxes having removable or hinged ends or sides. These prices will be quoted on application.

No.	Size of Platform, feet	Size of Wheels, inches	Size of Casters, inches	Weight, pounds	Price Each
A	2 x4	12x2	6x1 $\frac{1}{2}$	165	\$21.00
B	2 $\frac{1}{2}$ x4	12x2	6x1 $\frac{1}{2}$	170	22.00

Light, but well made and strong. 4-in. wheels, 12 $\frac{1}{2}$ in. across bottom, 19 in. across top. Price each., \$8.00

The Channon Lifting Truck

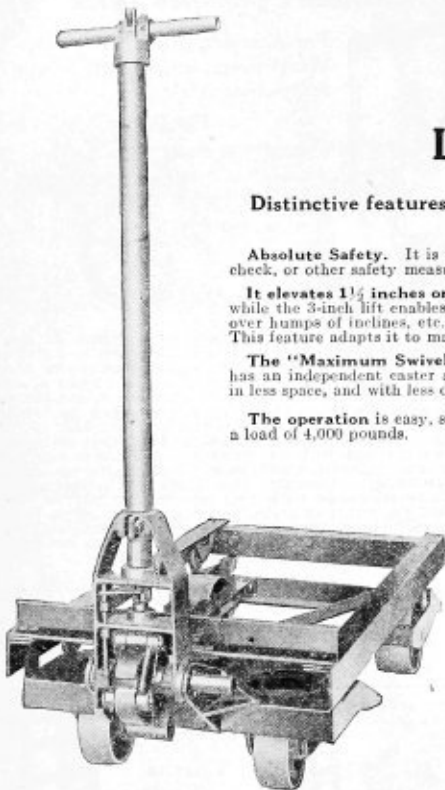

Distinctive features of this Truck which place it in a class by itself are

Absolute Safety. It is under perfect control of the operator at all times. No pneumatic release check, or other safety measure is necessary to prevent injury to workmen.

It elevates 1½ inches or 3 inches as desired. 1½ inch is sufficient on an ordinary smooth floor while the 3-inch lift enables it to clear high spots in an uneven floor and to pass in and out of cars, over humps of inclines, etc., where other lifting trucks would drag and stop, and possibly overturn. This feature adapts it to many conditions where trucks having less lift could not be used.

The "Maximum Swivel Caster," patented and used only on this truck. By its use the truck has an independent caster always under each front corner. These enable the truck to turn easier, in less space, and with less danger of upsetting than any other form of lifting truck made.

The operation is easy, simple and safe. A boy weighing 125 pounds can easily elevate and draw a load of 4,000 pounds.

They save space. One Channon Lifting Truck will do the work of many ordinary trucks because platforms are loaded and unloaded, not the trucks, which are always free for haulage purposes. The platforms are inexpensive and can be nested in small space.

Made in three standard sizes, but other sizes will be made to order.

Style A. Capacity 2,000 pounds. Size of truck, 18x30 inches.
Price.....\$75.00

Style B. Capacity 4,000 pounds. Size of truck, 20x40 inches.
Price.....\$90.00

Style C. Capacity 6,000 pounds. Size of truck, 27x48 inches.
Price.....\$150.00

All parts bearing strain are of malleable iron or steel of best quality.

Standard trucks are equipped with 7-inch wheels but when lower platforms are used we can furnish 6-inch diameter wheels. Two platforms are furnished with each truck. We can furnish other sizes when ordered, or you can make them in your own plant.

Before loading or after unloading

Nos. 0 and 3

mit easy handling. A boy can easily run it carrying its greatest capacity.

No. 4. A three-wheeled cart for all delivery purposes. The third wheel is built very substantially, for use in cities to assist in crossing gutters. Both ends and sides are removable, leaving a flat bottom. Built of the same material as the No. 3 cart. Both No. 3 and No. 4 carts are shipped with 1-inch tread wood wheels unless otherwise ordered.

Hand Carts

No. 3. A strongly built hand cart for painters, carpenters, bill posters, masons, etc., as well as for farm work and other heavy usage. It is also a handy cart for delivery purposes. The box is made of basswood with a steel band all around the top to protect against battered edges and broken corners. The sides and ends are removable. The frame is made of maple. The wheels are extra large to per-

Timber Trucks or Dollies

These trucks can be inverted and used as rollers. Frames are of hard maple, thoroughly bolted; rollers are of pipe with cast heads shrunk on.

No.	Diameter of Roller	Size of Frame	Weight, pounds	Price Each
2	5 in. reg. size...	18x18	46	\$ 7.00
3	6 in. reg. size...	18x18	55	8.50
4	7 in. heavy...	23x23	72	11.00
5	8 in. ex. heavy...	26x26	115	15.50

No. 6 Concave Dollies

Rollers 12 1/2 inches long, 7 1/4 inch diameter at each end and 3 1/2 inch diameter at center; frame 18x18 inches; weight 52 pounds.

Price each.....\$10.50

No. 7 Horse Shoe Dollies

For pushing lumber from or on to a pile. Can be placed near the edge and used from the ground. Roller 14x4 inches in diameter.

Price each.....\$6.00

No. 9 Side Rollers

The roller is made of metal rubbing and is very strong. It is easily placed in car doors, hatchways of vessels, etc. The roller slides along the stock and can be clamped rigidly at any position required.

No. 9. Side rollers, price each.....\$15.00

Universal "Boggie" Roller

Capacity
4 tons

Has two independent rollers on the same axle, which work same as a two-wheel truck, swinging around as if on a pivot.

Maple platform with wrought iron frame riveted. Height over all, 8 inches; rollers, 5 1/2 inches; length, 24 inches; width, 18 inches; weight, 100 pounds.

Price each.....\$24.00

No. 8 End Rollers

These rollers are especially adapted for the ends of cars. Roller 14x4 inches in diameter.

Price each.....\$5.50

Box Trucks

Low trucks, strong and well made, for handling large boxes or bales. Sharp cone head bolts to prevent package from slipping. Axles turned and wheels bored.

No.	Width, inches	Length, inches	Size, Wheels	Weight, pounds	Price Each
1	18	18	4x13 1/2	27	\$5.00
2	18	26	4x13 1/2	32	5.50

Axles are 1/2-inch square.

Log Binders

For binding logs on sleighs or cars; does away with binding poles entirely.

Price each.....\$3.90 Price per dozen...\$39.00

Anti-Friction Casters

Common Stem

Oblong Plate

Strong and durable. Plate rests on a series of steel rollers, all weight being carried outside of center of main wheel. This relieves all friction on the pivot and all strain upon the fastening screws.

No. 188 and larger sizes used for trucks.
To designate rubber wheels when ordering, add $\frac{1}{2}$ to iron wheel number, as 188 $\frac{1}{2}$.

Price Per Set of Four

Number	Rubber Wheels	Iron Wheels	Size of Wheels, Inches	Size of Plate, Inches	Height, Inches	Capacity, Pounds

Note.—Sizes up to 186 are made in different styles. Style 33 denotes common stem with iron wheel, style 37 denotes oblong plate with iron wheel.

Thread Guard Casters

This line of casters is exactly the same as the corresponding numbers noted above and in addition they have a steel guard around the axle which prevents threads from winding around it and binding it.

Number.....184-37 186-37 188 190 *8 *10
Per set of 4.....\$1.60 \$1.75 \$4.25 \$6.00 \$4.00 \$5.30
*These sizes are stationary and do not swivel. For dimensions, refer to table across the page.

Stationary Truck Casters

This series of casters is intended to match Payson Anti-Friction casters listed on top of page.

To designate rubber wheels add $\frac{1}{2}$ to number, as No. 8 $\frac{1}{2}$.

Anti-Friction Double Wheel Truck Casters

Two wheels in a single frame loosely pivoted to the plate. Anti-Friction wheel runs directly over the axis, the weight thus resting entirely on the axis of the floor wheel and not on the pivot.

The feature of their construction is maximum strength with minimum friction.

No. 82 and larger used for trucks.

Bullock Highest Grade Contractors' and Railroad Shovels

Made of the highest quality raw materials obtainable. The blades are made from the finest crucible steel of 70 to 80-point carbon and great tensile strength. Handles are carefully selected second growth Northern Ash with an absolutely accurate bend. Blade is carefully secured and the new socket straps grip the handle like a vise, successfully resisting all prying pressure from any direction.

Widely used by railroads and contractors. Adapted for the hardest service in handling crushed stone ballast, concrete, gravel, etc.

Standard No. 2 size shovels, blade $9\frac{3}{4} \times 12$ inches, with square or round point, black finish, wood or malleable "D" handle or plain long handle.

About 85 per cent of our shovels are furnished with wood D handles as shown in illustration.

"Plain Back" or "Strapped" Shovels

Round Point
Long Handle

Square Point
Long Handle

Shovels with square or round points, "D" or long handles are all furnished at the same price

The utmost care and attention is given each operation in the manufacture of our shovels and the system of inspection and testing is the most thorough and complete of any factory in the country. Every blade undergoes three separate tests in the forge department and every weld is guaranteed absolutely perfect. Alignment of blade and handle is correct in every detail, resulting in accurately balanced shovels with just the proper "hang." Every shovel is subjected to a severe breaking strain of 200 pounds for two minutes before being bundled for shipment.

BULLOCK BRAND. Our extra grade. Will outlast any other make. Adapted for the very hardest service such as handling crushed stone, ballast, gravel, concrete, etc. Widely used by railroads and contractors.

WINFIELD BRAND. Our regular first grade shovels. Blades are made of best crucible steel with good ash handles. This grade is perhaps our most popular among contractors and other large users of shovels.

HELMER BRAND. This grade is not intended for the hardest service, but is a good light weight shovel. It is a commercial grade about the same as found in hardware stores throughout the country.

Size Number	Size Blade, Inches		Bullock Brand Price per Dozen	Winfield Brand Price per Dozen	Helmer Brand Price per Dozen
	Width	Length			
2	9 $\frac{3}{4}$	12	\$16.50	\$14.50	\$ 9.00
3	10	12 $\frac{1}{2}$	17.00	15.00	9.50
4	11	13	17.50	15.50	10.00

Bullock Brand

The highest possible quality. Blades $8\frac{1}{4} \times 9$ inches.

Price per dozen . . . \$16.50

Sewer or Brick Shovels

Helmer Brand

A trifle lighter weight than Bullock but very serviceable. Same size blade. Price per dozen . . . \$9.50

Our Sewer or Brick Shovels are designed and intended for the hardest service. Blades are made from the very best crucible steel. Handles are straight grained, white and free from imperfections. Blade is properly shaped for the various uses to which a Sewer Shovel is used. A sharp bend in handle brings the lifting hand close to load, which is usually heavy, giving great leverage.

"Plain Back" or "Socket Strapped" Shovels

Western Mining Shovels Round Point, Long Handle

Bullock and Winfield Plain Back Western Mining Shovels are made with best quality genuine crucible steel blades, highly polished and strictly Northern Ash Handles, thoroughly waxed, thus protecting them from rotting out in water. Made in No. 2 size only, $9\frac{1}{2} \times 12\frac{1}{4}$ inch blades. Furnished with **Stiff Point, Half Spring or Full Spring Blade**. Unless otherwise ordered, we always furnish **Half Spring**.

Bullock Brand, price per dozen.....\$15.00
Winfield Brand, price per dozen.....12.50

Bullock Solid Socket Mining Shovels

Blade, neck and socket forged by patent process from one piece of highest grade crucible steel, full polished thick blade, oil tempered and hardened. Neck 1 inch in diameter; closed socket $6\frac{1}{4}$ inches long, fitted with highest grade white ash handles securely wedged into socket. Bullock Brand only. Size blade, $9\frac{1}{2} \times 12\frac{1}{4}$ inches.

per dozen. Price per dozen.....\$19.00

Irrigating Shovels with Step

The quality of our Plain Back Irrigating Shovels is exactly the same as the Plain Back Western Mining Shovels. They are, however, made with steel steps on blade of the same gauge as used in the blade, securely riveted on with three rivets. Blades are full polished. Handles, selected Northern Ash, medium lift.

Bullock Brand, price per dozen.....\$17.50
Winfield Brand, price per dozen.....15.50

Bullock Concrete Spades with Step

These spades are intended for use by contractors on concrete form work. When the semi-liquid concrete is poured into the forms, the larger stones find their way to the outside, thus leaving an irregular wall. By using these concrete spades, the stones may be forced back to the center of the form and the holes in the blade permit the liquid concrete to flow to the outside leaving it perfectly smooth.

Bullock Concrete Spades are strictly first quality and are of the socket strap or plain back pattern. Best quality crucible steel blade and straps, carefully tempered. Size of blade $7\frac{1}{2} \times 15$ inches. Selected ash handles either long or wood "D".
Price per dozen.....\$19.00

Spades with Wood "D" or Long Handles

Socket Strap Pattern with step. Blade and strap of highest grade crucible steel carefully tempered, full polished and edges sharpened; size $7\frac{1}{2} \times 12$ inches. Handles of selected Northern ash. Either long or wood "D" handles at same price.

Bullock Brand, price per dozen.....\$15.00
Helmer Brand, price per dozen.....9.00

Ditching and Drain Spades

Ditching and Drain Spades are a specialty with us. They are made with blades of the toughest steel obtainable and extra selected handles (wood "D") only, intended for hard, rough service. Blades full polished. Rigorously inspected before leaving factory.

Length blade, inches.	14	16	18	20
Weight per doz., lbs.	60	63	67	70
Bullock, per dozen	\$21.00	\$21.50	\$22.00	\$22.50
Helmer, per dozen	14.00	14.50	15.00

Moulders' Shovels

With Regular or
Split Wood "D" Handle

Special attention is called to our Moulders' Shovels. They are made of very high quality steel, and the perfect polish on both back and face of blade permits them to "clean" or shed the sand easily and quickly. The blade and handle are perfectly aligned and the lift is designed to make them accurately balanced. Size of blade $10\frac{1}{2} \times 12$ inches. Furnished with either regular wood "D" or split "D" handle.

Bullock Brand, price per dozen.....\$17.60
Winfield Brand, price per dozen.....15.60
Helmer Brand, price per dozen.....9.50

Telegraph Shovels and Spoons

Straight Handle, Long Straps

Our Telegraph Shovels and Spoons are equal if not superior to any on the market, regardless of price asked. The blades are forged from extra high grade crucible steel and finished black. Plain back; socket strap 22 inches long; fitted with extra heavy fine grade straight grained ash handles. Ninety per cent of all telegraph shovels and spoons are furnished with 8-foot handles. Both 8 and 9-foot are carried, other sizes shipped promptly from factory.

Telegraph Shovels

Size of blade, $9\frac{1}{2} \times 12$ inches.		
Length handle, feet.	8	9
Per dozen, Winfield Brand	\$24.50	\$28.50

Per dozen, Winfield Brand	\$26.00	\$30.00

Hollow Back Shovels

Square Point

Round Point

Hollow Back Shovels are made out of a single piece of steel. There are no welds in their entire construction. They cost less to manufacture than socket strap pattern and are, therefore, lower in price. For general and constant use, however, they are not so satisfactory as the plain back type. Furnished with good quality handles (wood "D" only). Size of blade 9½x11¼ inches. Boughton Brand, full polished; Kongo Brand, black.

Boughton Brand, price per dozen.....\$13.50
Kongo Brand, price per dozen.....8.00

Hollow Back Spades

Hollow Back Pattern: One piece good quality steel blade and socket, selected ash handle.

Boughton Brand, price per dozen.....\$13.50
Kongo Brand, price per dozen.....8.00

Coal or Coke Shovels

Square Point, Wood "D" or Long Handles

The dies from which our Hollow Back Coal Shovels are stamped, were designed from data gathered by diligent research and careful investigation among the actual users of these shovels in the coal fields. The shape of blade is exactly right to meet the approval of a large majority of our customers. The bowl is deep; frog is long and high, giving great capacity and extra stiffness, support and strength, preventing any buckling of blades. Bend in socket gives the proper lift and balance and brings "D" end of handle in the right place (just above knee) when in a shoveling position.

Boughton Shovels are made with a blade of genuine crucible steel 80 per cent carbon content. In Kongo Brand a high grade of open hearth steel is used. Blades are furnished finished black unless otherwise ordered.

Ames Sewer or Brick Shovels

No. 2. Shorter and heavier blade than regular Ames shovel. Price per dozen.....\$15.00

Bullock Coal and Coke Forks Diamond Tines

Our "Bullock Brand" Coal and Coke Forks are forged from one solid piece of steel for the tines, head and shank. Tines are diamond shaped and carefully oil tempered. Wide strap ferrules and heavy caps are used. Strong, selected 30-inch wood "D" handles are regularly furnished or malleable "D" handles, if specially ordered.

In the specifications given below, the width of fork is measured across center, not points of tines.

Coal Forks

Numbers	C110	C112	C112S	C114
Number of tines	10	12	12	14
Length of tines, inches	15	15	15	15
Width of tines, inches	1 1/2	1 1/2	1 1/2	1 1/2

Price per dozen	\$20.00	\$25.00	\$29.00	\$29.00

Wood "D" Fork Handles

With strap ferrules and caps attached. For coal and coke forks. Weight 24 pounds per dozen.
No. XXWD. Per dozen.....\$6.50

Bullock Four Tine Spading Forks Triangular Tines

Highest grade crucible forged steel polished tines, bronzed finish, angular (or diamond back) shape, tempered and thoroughly tested. Length of tines about 11 inches. Handles are selected, second growth hardwood, 1 3/4 inches in diameter, with malleable "D" grip. Approximate weight 54 pounds per dozen.

No. 1. Plain ferrule, per dozen	\$21.75
No. 2. Strap ferrule, per dozen	23.75

Bullock Manure Forks Oval Tines

Four full polished, bronze finish, oval tines. Length 12 inches. Handles either plain, 4 1/4 feet long or malleable "D", 1 3/4 inches in diameter. Weight about 41 pounds per dozen.

No. Y44 1/2. Plain ferrule, 4 1/2-foot handle:	
Price per dozen	\$15.50
No. Y4D. Plain ferrule, malleable "D" handle:	
Price per dozen	16.75

Steel Asphalt or Tar Rakes

Square, straight shank, 18 inches long. Strap ferrule. Black finish. Head and shank made of the best crucible forged steel. Fourteen straight teeth. Handles of selected ash, 5 feet long. Weight about 66 pounds per dozen.

No. A14, price per dozen	\$26.50
--------------------------	---------

Two-Man Rake Blue Finish—Made Extra Heavy

This is an especially good road rake for contractors. Operated by two men, it levels a load of broken stone in a quarter the time required by the old way. It is exceptionally strong and well made to withstand the rough service for which it is intended. It has nine 6-inch teeth. Head 14 1/2 inches wide. Handles of hardwood, 6 feet long. Weight 125 pounds per dozen.

No. 2M9. Price per dozen	\$56.00
--------------------------	---------

Steel Rakes

Single shank; best crucible forged steel head and ferrule; teeth 3 inches long. Selected hardwood handle, 6 feet long. Weights 32, 34 and 51 pounds per dozen.

	Per Doz.
No. S12. 12 teeth, Garden	\$16.25
No. S14. 14 teeth, Garden	17.75

Union Boot Protector

For use in excavating, trench and railroad work. Made of sheared steel, rust proof. Fitted with webbing strap.
Price per dozen \$7.00

Steel Hop or Stone Hooks

Highest grade crucible forged steel tines. 8½ inches long, extra heavy, oil tempered and tested. Diamond back shape. Solid steel head and shank. Steel ferrule. Bronze finish. Selected 5-foot handles. Weight 45 pounds per dozen.
No. 45H. Price per dozen \$22.50
No. 4M. Manura, 4 tines, 6-foot handle. \$17.50

Mortar Mixer Hoes

Solid shank. Full polished blade, with two holes as shown, size of blade 6x10 inches. Bronze finish. Handle 6 feet long. Weight 55 pounds per dozen.
No. MM10. Price per dozen \$27.90

Turf Edgers

Crucible forged steel polished and sharpened blades. Bronze finish steel ferrule and cap. Solid shank. Selected 4-foot handle. Weight 30 pounds per dozen.
No. TE. Price per dozen \$11.50

Railroad Scuffle Hoes

Special forged steel tempered blade, bronze finished steel cap. Selected straight 5-foot handle. Heavy malleable shank. Size of blade 4x8½ inches. Weight 46 pounds per dozen.
No. RSH. Price per dozen \$12.00

Post Hole Diggers

Eureka Pattern

No. C2. Eureka Pattern. Half round handles; steel blades; size 9¼x4¼ inches; 14 gauge. Digs holes 6 inches diameter. Handles 4 feet long. Weight per dozen 120 pounds. Packed three to a bundle.
Price per dozen \$13.50

Hercules Pattern

No. C3. Hercules Pattern. Steel blades. Malleable handle sockets bolted to round hardwood handles 4 feet long. Blades 9¼x4¼ inches; 14 gauge. Digs holes 6 inches in diameter. Weight per dozen 120 pounds.
Price per dozen \$21.00

Picks and Mattocks

Railroad or Clay Picks

With Tool Steel Points

Adze eye—pick and chisel point—high grade solid steel. The points of these picks are made of the best quality tool steel. Will give better and longer service than two ordinary picks. Especially adapted for working in rock and brick. Takes standard railroad pick handle.

Weight 7½ pounds. Price per dozen. \$16.00
Weight 8½ pounds. Price per dozen. 18.00

No. 33 Standard Dirt Picks

Point and Chisel

Furnished in the 6 to 7-pound size, unless otherwise ordered.

Weight 5 to 6 pounds. Price per dozen. \$14.00
Weight 6 to 7 pounds. Price per dozen. 15.00
Weight 7 to 8 pounds. Price per dozen. 16.00
Weight 8 to 9 pounds. Price per dozen. 18.00
Weight 9 to 10 pounds. Price per dozen. 20.00

Railroad Tamping Picks

High grade solid steel. V head, adze eye.
Weight 6 to 7 pounds. Price per dozen. \$18.00
Weight 8 to 9 pounds. Price per dozen. 20.00

Drifting Picks

Adze eye. Points of best grade crucible tool steel.
Weight 4½ pounds. Price per dozen. \$15.00
Weight 6 pounds. Price per dozen. 17.50

Short Ear Coal Picks

Cutting and mining shape. Tool steel points, soft steel center. Adze eye.
Weight 3½ pounds. Price per dozen. \$10.00
Weight 4½ pounds. Price per dozen. 11.00

Poll Picks

Solid hard steel, tempered, crucible steel points.
Weight 3½ pounds. Price per dozen. \$15.00
Weight 4½ pounds. Price per dozen. 17.00

Wrecking Picks

Similar to poll pick, but has a railroad pick eye. Used for prying and stripping, lifting, etc. Solid hard steel.
Weight 5 pounds. Price per dozen. \$18.50

Cutter Mattock

Best tempered steel. Made for service and durability. Long or short cutter. Specify which is wanted.

Price per dozen. \$18.00

Tool Handles

We take particular pride in both the quality and the size of our stock of tool handles. This section of our business has grown to large proportions, because of the uniformly high quality of the handles and our ability to make immediate shipments from our immense stock. The illustrations below have been made from actual photographs and accurately show the proportions of the different sections of the handles. Only the styles generally called for are shown and carried in stock. The approximate weights quoted are net and do not include packing.

Grades

Extra Grade: Carefully carved from second growth hickory with wax finish; absolutely clear and white and free from all imperfections. For those who demand and expect the very best.

No. 1 Grade: Second growth hickory; plain finish; small sound knots permitted, but otherwise free from blemish and strictly serviceable.

Salamanders

For Builders, Contractors, Shops, Etc.

These Salamanders are substantially designed and made for hard service. The pan, body and legs are of heavy steel, and the grates of cast iron. The ash pan is raised a good distance from the ground and projects past the edge of shell so as to prevent the coals dropping out. Fitted with handles for convenience in moving about.

For temporary heating in cold weather or for use in buildings where the regular source of heating is not available, these salamanders will be found extremely useful and economical. The fuel ordinarily used is coke.

Diameter of body, 16 1/4 inches. Height of body, 15 inches. Total height 28 1/2 inches.

With body of 16-gauge iron, price each.....\$4.00

The Brick Cleveland Clamp

This brick clamp does away with the necessity of handling bricks by hand, and is both convenient and practical where bricks are used in any quantity. Substantially made for hard usage and adjustable for a large variation in loading.
 Price per dozen.....\$40.00

Bullock Warranted Anvils

Wrought Base, Solid Crucible Tool Steel Face

General Blacksmiths
Pattern

Our Bullock Anvil is strictly an American product, and because of this is sold on its merits alone and not upon tradition. While the principal features of manufacture are essentially the same as the Peter Wright, it varies in one important particular, i. e., the face is made in one piece, whereas the old English method was to weld the face on in sections about six inches in length, a fair sized anvil requiring several sections to complete the face.

With the single exception of the face, the Bullock anvil is made in exactly the same manner as the famous old Mousehole and Peter Wright, but with newer and better equipment. The process of manufacturing the Bullock anvil is as follows: The base or bottom part is formed by piling up scrap iron, carefully selected, of course, and welding into a solid mass. While still hot it is placed in a die and blocked to shape, the power used being steam. The whole of the upper part including the horn and tail, is also forged from selected scrap. Next the tool steel face is welded on, the hardy and pritchel holes punched, the tail or heel squared and the horn finished to shape. The two pieces, base and upper part are then welded together at the waist. The anvil is then thrown on a finishing block and finished so far as forging goes, with hand tools.

The Bullock is an anvil with horn and heel in perfect proportion, large base that does not require strapping, tempered edges to prevent chipping, level and true face of correct size, also hardy and pritchel holes and other mechanical details of correct accuracy. In addition to this it has the proper resilience between anvil and hammer and a real musical ring. Its proportions overall are correct, its design is graceful, and above all it is stable on the block. Every-thing considered it is

Vulcan Anvils

Cast Iron Base—Tool Steel Face

These anvils are cheaper than our Bullock warranted anvils, but for occasional use will give satisfactory service.

The body or base is made of Lake Superior charcoal iron of superior mixture—no scrap used.

The face is one solid piece of tool steel thoroughly welded to body by special process.

Face is ground tempered and polished.

Horn is covered with and its extremity made entirely of tough untempered steel.

Number	Approximate Weight, Pounds	Size of Face, Inches	Hardy Hole	Pritchel Hole	Purpose	Price Each

Price each.....\$0.60

Blacksmiths' Tongs, Etc. (Tongs are measured overall)

Drop Forged from Solid Steel—Uniform in Size and Weight—Good Design

Straight Lip Tongs

For Flat Thin Work

Heavy stock in jaws. Can be shaped by blacksmith to suit his individual needs.

Number	11	12	13	14	15	16
Length, inches	16	18	20	22	24	30
Weight, pounds	1½	2	2½	2¾	3	4½
Price pair	\$0.75	\$0.80	\$0.85	\$0.90	\$0.95	\$1.10

Bolt Tongs

For Round Work

Opening behind jaws gives space for head of bolt.

Number	17	18	19	20	21
Holds rounds	1½	1¾	2	2¼	2½
Length, inches	18	18	20	20	22
Weight, pounds	1½	1¾	2	2¼	2½
Price, pair	\$0.90	\$0.90	\$1.00	\$1.00	\$1.20

Number	22	23	24	25	26
Holds rounds	¾	¾	1	1½	1½
Length, inches	22	24	24	24	24
Weight, pounds	2½	3	3	3¾	3½
Price, pair	\$1.20	\$1.40	\$1.40	\$1.40	\$1.40

Double Pick-Up Tongs

For Hot Work, Round or Flat

Number	27	28	29	30
Length, inches	18	20	22	24
Weight, pounds	2½	2¾	3	3½
Price, pair	\$1.20	\$1.30	\$1.35	\$1.50

Single Pick-Up Tongs

For hot work. Jaws are larger than double pick-up and will handle heavier work.
No. 31. Length 22 inches, weight 2½ pounds, pair..... \$1.50

Welding Compounds

The Best Flux known for Welding

And MALLEABLE Iron to Cast

PREPARED ESPECIALLY FOR WELDING
FAR SUPERIOR TO COMMON BORAX

We carry in stock a number of brands of welding compounds, four of which are given here. These can be furnished in any quantity desired.

Prices per Pound

Rectangular Holes.—No. 0 has 2 1/2x13; No. 0 1/2 has 1 1/2x2 1/2, 3/4x4, 1 1/4x4, 1 1/2x4 and 3/4x4 1/4; No. 1 1/2 has 1x3 and 1 1/2x3 1/2; No. 2 1/2 has 1 1/2x3 and 1 1/4x3 1/2; No. 2 3/4 same as No. 2 1/2; No. 3 1/2 has 1x3 and 1 1/2x3 1/2; No. 4 has 3/4x3 1/4 and 1 1/2x4; No. 4 1/2 has 1 1/2x3 and 1 1/4x4; No. 5 has 1 1/2x3, 1x4 and 1 1/2x5. **Triangular Holes.**—No. 0 1/2 has 2 1/2x3 1/4. **Hex. Hole.**—No. 0 1/2 has 1 1/2.

The above does not include grooves around the outside.

Leveling Blocks

Made of superior pig iron and accurately **planed** on one side, unless otherwise ordered.

Can supply solid or ribbed pattern. The ribbed blocks are cast hollow and are consequently lighter—weight about 1 pound to 4 cubic inches, ribbed blocks about 1/2 less.

Can be furnished 12 to 80 inches long by 10 to 28 inches wide by 1 1/2 to 5 inches thick.

Price solid pattern, planed one side, per pound \$0.06

Price ribbed pattern, planed one side, per pound06 1/2

Solid pattern can be furnished planed both sides and all edges at extra cost.

Plain Cheney's

Blacksmiths' Cones or Mandrels

Cast round and smooth. Well adapted for forming rings, bands or similar work.

Cheney's Patent has slot, very convenient for holding iron when bending rings. They are strengthened with ties inside the slot.

Height, Inches	Diameter at Base, Inches	Diameter at Top, Inches	Plain			Cheney's

Champion Whirlwind Blast Tuyere Iron

Whirlwind Blast

Produces a circular rotary blast and prevents the heat from going to waste up the chimney. Concentrates the blast and heat in tuyere nest, making a hotter fire. Also has revolving pick which keeps slot free of clinkers. Dimensions are: Depth, 5 inches; width, 8 1/4 inches; length, 10 1/2 inches; over all, 12 3/8x14 1/4 inches. Weight 60 pounds.

Price each \$6.00

Champion Tuyere Irons Patent Adjustable Nozzle

Made with large inlet for free access of air. The small necked patterns should not be used except with bellows or positive blow.

Price each \$2.50

Warren's Tuyere Iron

Blast is regulated by revolving a ball, which has three unequal sides. Open bottom valve and all cinders and ashes drop out.

Weight about 31 pounds. Price each \$2.50

Norton's Tuyere Iron

To regulate, turn large rod. Levers and springs can be easily changed for right or left hand use. Draw out small rod to drop ashes.

Weight about 27 pounds. Price each \$2.50

Duck Nest Tuyere Iron

Single Pattern

No.	Style	Weight, Pounds	Price Each

2	Single	15	1.35
3	Single	18	1.60
4	Double	17	1.60

Sledges and Heavy Hammers

Quality Tools—Forged from Well Balanced Designs—Heat Treated and Properly Tempered for Purposes Intended—Polished Faces—Black Japan or Oil Finished

Dimensions are given for large sellers in light, medium and heavy sizes—other sizes are in proportion.

Showing Double Faced Sledge and handle. The most popular sledge for striking only—the two faces render it longer lived than the single face pattern.

Handles always sold separately—see index.

Blacksmiths' Sledges

While known to the trade as Blacksmiths' Sledges, these types are used by contractors, railroads, mining companies, as well as other industries requiring heavy hammers or sledges.

Blacksmiths' Hand Blowers

Champion "400"

Full Diameter Nut Pipe
Champion Midway

Lancaster Geared

Champion "400" Steel Blacksmiths' Blower

The famous Champion 400 blower is one of the best known and most used blowers on the market. Made with adjustable ball bearings and high speed spiral gearing. Will produce a white heat blast equal in every respect to a blast produced by a power blower. The bearings and gears are made from the best tool steel and phosphor bronze, machined and cut from solid metal, and fitted with the precision of a watch, all enclosed in an oil tight, dust proof casing. The blower is very compact; can be taken apart for transportation and again set up in a few moments. With every blower the necessary piping is included and also a Whirlwind blast anti-clinker, heavy nest tuyere iron which produces a circular rotary, whirlwind blast which heats iron at least one-third quicker than tuyere irons constructed differently. The No. 400 blower is made in three sizes. The size with the 12-inch fan is, however, the most popular, as the larger sizes are much harder to turn, the 16-inch size at least 50 per cent harder.

|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| No. 400. | Champion steel blacksmith blower with whirlwind blast, anti-clinker, heavy nest, tuyere iron, fan 12 inches in diameter, complete with piping, blower weight 100 pounds, tuyere iron 60 pounds. | Price . . . \$37.00 |
| No. 420. | With 14-inch fan, weight 170 pounds. | Price . . . 45.00 |
| No. 421. | With 16-inch fan, weight 175 pounds. | Price . . . 48.00 |

Champion Midway Blower

The Champion Midway blower is a substantial, direct driven blower, and though not as finely constructed as the Champion 400, it is durable and practical in every respect. As shown in illustration it has spiral cross gears, which run in oil and are enclosed in a dust proof casing. The gears are all accurately machined, run easily, and crank can be turned in either direction. The head is mounted on a strong base and takes up but little space. Diameter of fan, 12 inches. Weight about 115 pounds. Tuyere iron, 50 pounds.

Price complete with center blast heavy nest ball tuyere iron and piping . . . \$30.00

Lancaster Geared Blower

This blower is well made, direct driven blower, built to meet the demand for a reliable blower at a lower price than the Champion 400 or the Midway blower. It has no belt, ratchet or clutches. Runs easily and the crank can be turned in either direction. The head is adjustable and mounted on a substantial base. Fan is 12 inches in diameter. Weight 125 pounds.

Price complete with tuyere iron and pipe as illustrated . . . \$20.00

Blacksmiths' Forge Blowers

A complete line of blacksmiths' forge blowers, belt driven and direct connected electrically driven, are shown elsewhere in this catalog. See index.

No. 401 Forge with Shield. Also furnished with Half Hood and Closed Hood.

Champion Steel Rivet Forges (400 Series)

Equipped with the Famous Champion 400 Blower

The 400 series of Champion Steel Rivet Forges are equipped with the famous "400" noiseless, high-speed geared blowers. The "400" Blower is equal to a power machine and will produce a white heat blast which cannot be obtained with the regular hand blower. Operates with marvelous ease, produces a strong, regular and positive blast and will create a welding heat on 4-inch bar iron in ten minutes. Handle can be turned in either direction. Fitted with the highest possible grade of adjustable bearings, with cups and cones lathe turned from the solid bar, hardened as hard as glass, ground and polished to the highest finish, making them perfect and durable high-speed adjustable bearings.

This line of forges is especially intended for railroads, bridge and tank builders, structural steel workers, etc., who know it is always economical to buy the best. They are easily taken apart and set up again. Made of steel throughout, strong and light. Made in several sizes and styles as shown in list below. The No. 401 is the most popular forge.

No.	Price, Each	Style of Forge	Diam. of Fan, Inches	Diam. of Blower, Inches	Height of Forge, Inches	Apprx. Wt. Lbs.
401	\$35.00	With Shield	18	9	30	115
402	38.00	With Half Hood	18	9	30	120
403	40.00	With Closed Hood	18	9	30	125
401 1/2	40.00	With Shield	22	9	30	120
402 1/2	43.00	With Half Hood	22	9	30	125
403 1/2	45.00	With Closed Hood	22	9	30	130

Champion Steel Rivet and Toolmakers' Forges

These forges have hearths 24 inches square to which are riveted the angle steel legs. They are equipped with the famous 400 blower, the same as furnished with the No. 401 forge, which is described in detail above, and is large enough to cover the entire surface of the hearth with a hot fire should it be necessary. The blower is noiseless and blast is produced by turning crank in either direction. For many kinds of work a hearth 24 inches square is preferable to one 18 inches in diameter, there being more room for fire, coal and tools. These forges are first quality in every respect and are very popular numbers. Hearth 24x24 inches; height 30 inches; fan 9 inches in diameter.

- No. 404. Rivet Forge with Shield as illustrated, weight 170 pounds. Price.....\$45.00
 No. 405. Toolmakers' Forge with Half Hood Complete, weight 180 pounds. Price.....49.00

Furnished with Shield, as shown, or Half Hood.

Champion Steel Boilermakers' and Machinists' Forges

These forges have hearths 30 x 30 inches and the blower fan is 10 inches in diameter. The blower is the same as in the No. 401 forge, except that it is a size larger and is powerful enough for almost any work that can be placed on the hearth. The forges are made of steel throughout with legs riveted to hearth and thoroughly braced, making them firm and rigid. The illustration shows the No. 407 forge which is furnished with half hood. The No. 408 is exactly the same except with shield. Hearth 30x30 inches; height 30 inches; fan 10 inches diameter.

- No. 406. Boilermakers' Forge, with shield, weight 230 pounds. Price.....\$55.00
 No. 407. Machinists' Forge, with half hood, as illustrated; weight 240 pounds. Price.....60.00

Champion Steel Horseshoers' and Blacksmiths' Forge

The hearth in this forge is made of unusually heavy steel plate with perpendicular sides 6 inches high, and can be bricked up to suit the needs of any blacksmith. Provided with the famous 400 blower and the Champion whirlwind blast tuyere iron without extra charge. No. 408 Forge can be furnished with tight and loose pulleys for turning blower with power. Height of forge 30 in.; fan 12 in. diam.

- No. 408. Hearth 30 x 36 inches; half hood as illustrated; weight 300 lbs. Price.....\$65.00
 No. 408 1/4. Same as No. 408 with tight and loose pulleys for power; weight 345 pounds. Price.....76.50
 No. 409. Hearth 30 x 40 inches; half hood as illustrated; weight 310 pounds. Price.....70.00

Champion Large Combination Forge

This is an extra heavy cast-iron forge, designed for use in railroad and large blacksmith shops, plow works, etc. The hearth is 6 inches deep and very heavy. It can be built up with fire brick and have every advantage of an all brick or stone forge. Equipped with a 400 blower, whirlwind blast tuyere iron, hood and water tank complete. Height of forge 26 inches.

- No. 430. Forge, hearth 38 x 52 inches; fan 12 inches in diameter; weight 540 pounds. Price.....\$80.00
 No. 431. Forge, hearth 39 x 63 inches; fan 14 inches in diameter; weight 575 pounds. Price.....90.00
 These forges can be furnished without hood and blower if desired. Prices quoted on application.

No. 440
with
Half
Hood

Champion Electric Driven Blacksmith Forges

Electric motors for driving blower fans have become so popular with blacksmiths and others that we now offer a selection of forges completely equipped with electric blowers. The four forge outfits described below offer a wide range of choice, the No. 443 being suitable for those who do not have very heavy work or a great amount of it and the No. 442 Large Blacksmith Forge intended for constant service.

Illustration shows forge equipped with a No. 1 Blower, but the No. 50 and No. 51 are so great an improvement that we are furnishing the different outfits as follows:

Nos. 440, 441 and 443 are provided with a No. 50 Blower, and No. 442 with a No. 51 Blower. These blowers have variable speed controlled by a detached reostat and a big motor using either alternating or direct current. For detailed description refer to page on blowers.

No. 443. Electric driven light forge, built tuyere iron, cast-iron hearth 23x25 inches, tubular legs, height 30 inches, with hood, weight 225 pounds. Price.....\$45.00

No. 441. Electric driven forge, whirlwind blast, anti-clinker heavy nest tuyere iron, cast-iron hearth 32 x 45 inches, height 30 inches, with hood, weight 360 pounds. Price.....60.00

No. 440. Electric driven forge, same as No. 408 forge except with electric blower, whirlwind blast, anti-clinker heavy nest tuyere iron, hearth 30 x 36 inches, height 30 inches, with hood, weight 300 pounds. Price.....67.00

No. 442. Electric driven large forge, same as No. 430 forge, except with electric blower, whirlwind blast, anti-clinker heavy nest tuyere iron, hearth 38 x 42 x 7 inches deep, height 26 inches, with hood and coal box complete, weight 360 pounds. Price.....80.00

Nos. 440, 441 and 442 Forges furnished with water tank, \$2.75 extra.

Champion "Midway" Spiral Geared Cast Iron Hearth Forges

No. 71 with Half Hood

No. 75 with Shield

No. 72 with Shield

No. 73 with Half Hood

The Champion "Midway" Spiral Geared Cast Iron Hearth Forges are well built, thoroughly reliable in every respect and we recommend them as strong and durable cast-iron forges. The blower is the Champion "Midway" with its cross spiral gearing, enclosed in a dust-proof case. This blower is simple in construction and without small gears or pinions, but does not have adjustable ball bearings as used in the Champion 400 line. It produces a strong blast, however, and crank can be turned in either direction.

The Midway forges, while not as well made as the Champion 400 line, are good, dependable, medium-priced forges and are especially desirable for mechanics who do not have constant use for a forge.

No.	Style Forge	Size of Hearth	Price Each	Size of Fan	Height	Weight
75	Shield	22 inches in diam.	\$30.00	10 inches	33 inches	140 pounds
76	Half hood	22 inches in diam.	33.00	10 inches	33 inches	145 pounds
72	Shield	23 x 35 inches	36.00	10 inches	30 inches	185 pounds
73	Half hood	23 x 35 inches	40.00	10 inches	30 inches	190 pounds
*71	Half hood	32 x 45 inches	50.00	12 inches	30 inches	300 pounds

*No. 71 fitted with water tank, \$5.00 extra.

Champion "Midway" Spiral Geared Rivet Forge

No. 78. Midway Steel Rivet Forge with shield; hearth 18 inches in diameter; height 30 inches; fan 10 inches; weight 135 pounds. Price \$31.00

No. 78. Champion "Midway" Spiral Geared Rivet Forge is intended for those who do not wish to invest their money in the the highest grade forge, No. 401, and do not wish a Midway forge with a cast iron hearth, such as the No. 75. It produces a good blast, by turning crank either way, and is sold guaranteed to be a strictly first class medium price forge.

Champion "Midway" Steel Forges

A substantial and firmly built steel forge, constructed of heavy steel plate, legs riveted to the hearth and strongly braced. The sides of the hearth of the No. 80 are 6 inches wide and cover every requirement for an up-to-date blacksmith fire. The Midway blower with its spiral gearing is used. Equipped with a heavy nest tuyere iron weighing 50 pounds; the same as furnished with the Midway blower when sold separately. A first-class moderate priced forge.

No. 80
with
Half
Hood

No. 80. Midway Steel Forge; hearth 30 x 36 x 6 inches deep; height 30 in.; fan 12 in.; with half hood and 50-lb. heavy nest tuyere iron; weight 300 lbs. Price.....\$58.00
Extra for water tank 5.00

No. 79. Midway Steel Forge; hearth 24 x 24 in.; height 30 in.; fan 10 in.; with shield; weight 180 lbs. Price.....\$40.00

Champion "Lancaster" Geared Forges

No. 41 with half hood.

No. 43 with half hood.

No. 45 with shield.

No. 48 with shield.

In this catalog we offer for the first time, a line of direct driven forges equipped with the Lancaster Geared Blower. This line is made by the makers of the Champion 400 and Midway Blowers and Forges, and is their third grade. The Lancaster Blower is described in detail on another page. It does not have ball bearings, but is smooth running and crank turns either direction to produce blast.

The No. 41 Blacksmith Forge is a well built, direct-driven forge with cast iron hearth. The Lancaster Geared Blower is attached as shown in illustration. A heavy nest ball tuyere iron weighing 50 pounds is furnished with each forge. A complete, well built blacksmith forge at a very reasonable price.

No. 42 Agricultural Forge is a well made, low priced, direct-driven forge, especially recommended for agricultural use. It is nicely finished and with its large hearth and fan it is very suitable for farm use. The No. 43 is the same as No. 42, except that it is provided with a half hood instead of shield.

Nos 45 and 46 are strong, light, direct-driven, portable forges with cast iron hearths 22 inches in diameter and differ from each other only in that one has a shield, while the other has a half hood.

No. 48 is a new steel rivet forge of the same pattern as the Champion No. 401 and equipped with the Lancaster Geared Blower. It is a very light, convenient and serviceable rivet forge at a moderate price.

No.	Style Forge	Size of Hearth	Size of Fan	Height	Weight	Price each
*41	Half hood	32 x 45 inches	12 inches	30 inches	300 pounds	\$50.00
42	Shield	23 x 35 inches	12 inches	30 inches	165 pounds	36.00
43	Half hood	23 x 35 inches	12 inches	30 inches	170 pounds	40.00
45	Shield	22 inches diam.	10 inches	30 inches	115 pounds	27.00
46	Half hood	22 inches diam.	10 inches	30 inches	120 pounds	30.00
48	Shield	18 inches diam.	10 inches	30 inches	115 pounds	31.00

*No. 41 fitted with water tank, \$5.00 extra.

Champion General Purpose Lever Forges

No. 55 with Shield.

No. 59 with Half Hood.

No. 61 with Half Hood and Water Tank.

No. 150 with Shield.

The Champion General Purpose Lever Forges are made with double ratchet, strong and substantial, adapted for all kinds of medium work, and will be found reliable and first class in every respect. The No. 61 is provided with an improved, revolving anti-clinker ball tuyere iron for regulating blast. No. 150 and 151 have single ratchet and are intended mainly for farmers who have only occasional use for a forge, and then only for light repair work.

No.	Style of Forge	Size of Hearth	Height	Size of Fan	Weight	Price Each
55	With shield	18 inches diam.	30 inches	8 inches	75 pounds	\$24.00
56	With half hood	18 inches diam.	30 inches	8 inches	80 pounds	27.00

151	With half hood	18 inches diam.	30 inches	8 inches	85 pounds	16.00

Buffalo Steel Forges

These forges combine lightness with great strength. Fire Pans are constructed of heavy rolled steel plate, riveted and strongly reinforced with angle steel around the edges. The angle steel legs are cross braced with bar steel, making rigid forges which will stand considerable rough usage. They are equipped with a powerful, easy running Buffalo No. 200 Silent Blower, also hinged and balanced automatic ash gate, which opens by a touch of the foot. A 14-inch blower will produce a 3-inch blast pressure with fan turning 2200 R. P. M., and this speed is not maximum. These forges can be furnished with electric blower and are priced below.

- No. 600** Contractors' Forge, hearth 24x24 inches, 14-inch fan, with shield and heavy duty vulcan tuyere iron. Weight about 210 pounds. Price.....\$45.00
- No. 600E** Same as No. 600 except with electric blower. 48.00
- No. 601** Same as No. 600 except with half hood. Price..... 50.00
- No. 601E** Same as No. 600 except with half hood and electric blower. Weight 185 pounds. Price..... 51.00
- No. 604** Horseshoers' Forge, hearth 30x36 inches, 14-inch fan, with half hood and heavy duty vulcan tuyere iron. Weight 297 pounds. Price..... 65.00
- No. 604E** Same as No. 604 except with electric blower. 60.00
- No. 605** Blacksmiths' Forge, hearth 30x40 inches, 14-inch fan, with half hood and heavy duty vulcan tuyere iron. Weight 312 pounds. Price..... 70.00
- No. 605E** Same as No. 605 except with Electric blower. 63.00
- Any of these forges furnished with water tank, \$5.00 extra.

No. 625 Buffalo Steel Rivet Forge

This forge is simple and strong, able to stand up under hard service. It is provided with a Buffalo 200 Silent

Blower with a 12-inch fan. The fire pan is made of heavy rolled steel plate, strongly riveted. Wind-shield and blower are detachable and can be

packed in the fire pan for transportation. A heavy tuyere plate is furnished, which distributes the blast to insure the best results in heating.

No. 625 Rivet Forge, Hearth, 18 inches in diameter, 12-inch fan. Weight 110 pounds. Price..... \$35.00

Buffalo Standard Blacksmiths' Forges

No. 650 Forge is ideal for all around horse-shoeing. It has sufficient capacity for doing the heaviest work in the shortest time, and at the same time affords easy regulation for a smaller fire. When it is desired to clean out the fire pot, it is only necessary to poke the fire a little while turning the valve rod, the

rotating valve quickly crushes and cleans out the clinkers and ashes. The balanced ash gate makes dumping of ashes very convenient. Equipped with a 14-inch Buffalo No. 200 Silent Blower and Vulcan Tuyere iron.

No. 651 is a medium sized forge for indoor work. It is equipped with a 12-inch Buffalo Blower which furnishes a strong blast. The legs are not cross braced as on the No. 650, but an angle iron base attached to each

leg at the corner. The round tuyere iron enables the operator to have either a shallow or deep fire as is required.

- No. 650** Blacksmith Forge, Hearth 28x40 inches, 14-inch fan, with half hood and heavy duty vulcan tuyere iron. Weight 332 pounds. Price.....\$50.00
- No. 650E** Same as No. 650 except with electric blower. Price..... 50.00
- No. 651** Horseshoers' Forge, Hearth 23x30 inches, 12-inch fan, with half hood and round tuyere iron. Weight 205 pounds. Price..... 40.00
- No. 651E** Same as No. 651 except with electric blower. Price..... 45.00
- Any of these forges furnished with water tank, \$4.00 extra.

Cast Iron Wagonmaker's Forges

These forges are intended to meet the requirements for extra large and substantial forges in wagon and blacksmith shops generally where heavy work is handled to a large extent. Made with cast iron hearth and legs. The coal box is cast into the hearth as shown in illustration. The legs are short to provide a low hearth for greater convenience in handling heavy work. The extra large tuyere iron enables the operator to make quick welds on the heaviest work.

The No. 671 Forge is provided with a cast iron hood, and extra heavy hearth fully 7 inches deep which may be lined with fire brick or clay.

No. 670-S Wagonmakers' Heavy Forge, Hearth 38x42 inches, 14-inch fan, with half hood and extra large "R. R." tuyere iron, size 12x14 inches. Weight 527 pounds. Price.....\$71.00

No. 671 Wagonmakers' Extra Heavy Forge, Hearth 38x42 inches, 14-inch fan, with cast iron half hood and extra large "R. R." tuyere iron, size 12x14 inches. Weight 632 pounds. Price.....\$85.00

Either of these forges can be furnished with water tank for \$5.00 extra.

Prices for either No. 670S or No. 671 Forge equipped with electric blower quoted upon application.

Improved Mole Tire Shrinkers

With or Without Anti-kink Device

Made of first class materials and very strong. Complete with lever. The anti-kink device permits of the tire being upset without being moved. Pressure is applied with the foot.

	No. 1	No. 2	No. 3
Takes tires up to, ins.	2½	3	4
With anti-kinker, price each.		\$12.50	\$15.00
Without anti-kinker price each.	\$ 8.00	12.00	14.50

No. 4 American Tire and Axle Shrinker

A powerful machine made to stand on the floor. It has two jaws 4 by 2 inches wide made of the best tool steel and with hardened machine-cut teeth. It will easily shrink 4 by 1-inch round tire, down to the smallest buggy tire, and axles up to 1½-inch square. Can be handled by one man if required. Weight 345 pounds. Price each..... \$35.00

Western Chief No. 2 Upsetter and Welder

This combines two separate machines in one, by simply removing the top jaws to the side of machine most adapted for work to be done. Is built on the most modern mechanical principles. The leverage is applied to the sliding head so that the lines of force are directly in line with the working stresses, thereby reducing friction on sides to a minimum, making it easy for one man to operate.

The jaws are of refined tool steel, machine-cut and properly tempered. Size of jaws tire side, 4½ inches wide. Will shrink from the smallest to 5 by 1½-inch round edge tires. Weight 915 lbs. Price each..... \$100.00

The New Patent Eureka Tire Bender

A strong and powerful tool with all latest improvements. Adjusting screws with graduated indicator on each side of Bender showing exact size of tire being bent and giving operator full control over his work.

The end rolls are provided with collars to prevent tires from twisting so both ends meet when bent. Two cranks are furnished with each bender. Has two speeds, one for light and fast work, the other for heavy work.

No. 1. Bends 4 by 1-inch tire; weighs 190 lbs.	Price each..... \$18.00
No. 2. Bends 6 by 1-inch tire; weighs 300 lbs.	Price each..... \$28.00

Tire Shrinkers and Benders

Improved Stoddard Tire Shrinker

Requires no floor space, as it is bolted to the side of wall or post. Is easily operated by one man and has attachment to prevent light tires from kinking. With each machine we supply a short iron lever which can be lengthened to suit operator.

No. 1. For 2-inch tires or smaller, each.....	\$8.00
No. 2. For 4-inch tires or smaller, each.....	\$14.00

No. 3. A special machine for upsetting 4-inch tires and smaller. Has two sets of loose jaws, which are adjustable for both light and heavy tires, also for upsetting axles up to 1½-inch thick.

Price each..... \$17.50

The Champion Star Tire and Axle Upsetter and Welder

The Champion "Star" Tire and Axle Upsetter and Welding machine is a tool which requires little explanation to satisfy anyone interested in doing very heavy city wagon work, as well as all kinds of carriage work. It is sold on a guarantee to do the work claimed for it with a minimum of exertion. It has no unnecessary machinery to get out of order and can be operated by anyone. It is designed and built as a powerful tool. The eccentric shaft, as well as the eccentric strap, is made from best quality hammered steel. The jaws are steelted with refined tool steel and will stand years of hard work.

No. 1. Upsets or welds tires from ¾-inch thick up to 5 by 1¼ inches; upsets or welds axles ¾-inch up to 2¼ inches; upsets with one revolution, 2 inches. Weight 800 lbs. Price each..... \$100.00

No. 2. Upsets or welds tires from ¾-inch thick up to 7 by 1½ inches; upsets or welds axles ¾-inch up to 3¼ inches; upsets with one revolution, 2 inches. Weight 1075 lbs. Price each..... \$125.00

No. 3. Upsets or welds tires from ¾-inch thick up to 8 by 1½ inches; upsets or welds axles ¾-inch up to 3½ inches; upsets with one revolution, 2 inches. Weight 1125 lbs. Price each..... \$145.00

Vulcan Tire Benders

No. 1. With turned rollers and bearings; will bend tires up to 3¼ inches to a circle 30 inches diameter or larger.

Prices Including Crank

No.	Capacity	Price Each
1	3 ¼ inches or smaller.....	\$6.00
2	3 ½ inches or smaller.....	7.00
2 ½	6 inches or smaller.....	8.50

No. 2 and 2 ½

Nos. 2 and 2½ Tire Benders. Have steel gear and pinion; turned steel rollers and bearings; will bend to a circle 30 inches or larger.

Channon Blacksmith Post Drills

High Grade Ball Bearings

THESE two drills are made in large quantities by automatic machinery and are consequently sold at attractive prices. Will give satisfaction for all ordinary work within their capacity. Both are well designed and easy running. Suitable for blacksmith, wagon or machine shops, or for contractors' use in the field. Carefully and accurately made in every respect—with the lathe turned tables, bearings jig-bored from the solid and ground, Ball-bearing between feed screw and spindle for end thrust, saving 20 to 50 per cent in power. Both have automatic self-feed and back gears.

Spindle is fitted with our Gripwell positive drill chuck for $\frac{1}{2}$ -inch straight (flatted) shank drills. This chuck has positive interlock—without a loose or moving part—the drill bit absolutely can not turn in the socket.

No. 75—Capacity up to $1\frac{1}{4}$ inch holes.
Drills to center of 15 inch circle.
Two speeds—back geared.

Channon No. 75 Ball-Bearing Post Drill

A good all-around post drill for drilling up to $1\frac{1}{4}$ inches in metal.

Spindle has up and down run of $3\frac{1}{2}$ inches.

Back-geared (with third gear), automatic self-feed, square lathe-turned and slotted table. Two speeds, fast and slow, can be quickly changed from one to the other. Bearings jig-bored. Has long heavy bearing and ball-bearing, to take end thrust. Spindle $1\frac{1}{8}$ -inch diameter. Steel extension crank handle.

No. 75. Weight 125 pounds. Price.....\$16.50
Extra for tight and loose pulleys..... 4.00

No. 125—Capacity up to $1\frac{1}{4}$ inch holes.
Drills to center of $16\frac{1}{2}$ inch circle.
Has Quick Return and Pilot Lever Feed.

Channon No. 125 Ball-Bearing Post Drill

This is a new drill of stocky design with the pilot lever feed and quick return, both quick acting features never found on a drill at this price before.

Also has automatic self-feed, two speeds, end thrust, ball bearings, all bearings ground from the solid (no babbitt), lathe turned and slotted table, spindle, $1\frac{1}{8}$ -inch diameter, up and down run is $5\frac{1}{2}$ inches. This drill is simply and substantially built throughout.

No. 125. Weight 140 pounds. Price.....\$27.50
Extra for tight and loose pulleys..... 4.00

Blacksmiths who want good, durable tools should give us a trial. We sell only the best.

Champion Blacksmiths' Post Drills

Black Diamond Self Feed Post Drill

The Champion Ball-Bearing Black Diamond Self-Feed Post Drill is built on scientific principles. The gearing is designed for easy and quick running, being compounded for increasing power. There are two fly wheels as shown in the illustration, each making two revolutions to each turn of the crank. It has two speeds, crank turning same direction for both. Spindle has end thrust ball-bearings, which are ground from solid metal.

Drills to center of 18-inch circle and holes up to 1½ inches. It is equipped with automatic self-feed and a lathe-turned, slotted table. Spindle is 1¼ inches in diameter and has an up and down run of 4 inches. A wheel holder is furnished for drilling tires.

All parts are standard and interchangeable. Spindle is bored for ½-inch straight shank drills. Weight about 255 pounds.

Price each \$24.00

With Pulleys for Power 28.00

No. 96 Quick Return Blacksmiths' Post Drill

A time saving machine at a reasonable price. Quick return lever is thrown into place while drill continues in motion, where it remains until bit is raised out of work, when it automatically stops, requiring no attention from operator, and is again ready to start next hole.

Back-gearred with an improved third gear principle. Crank has forward motion on 1st and 2nd speed, 3rd gear being a part of handle hub and in use only when on 2nd speed.

Drills to center of 15½-inch circle. Drills holes from ¼ to 1¼ inches. Regularly bored for ½ inch. Straight shank drills. All gears are protected with double journal bearings. All bearings ground from the solid. Weight 135 pounds.

Price each \$12.50

With Pulleys for Power 15.50

No. 98 Self Feed Blacksmiths' Post Drill

This is a first class back-gearred post drill. Spindle has end thrust ball bearings, which save 20 to 50 per cent of power. Bearings are made from highest grade lathe-turned tool steel. Drills holes to 1 inch to center of 14-inch circle. Full automatic self-feed. Diameter of spindle 1 inch, bored for ½-inch straight shank drills. Up and down run 3 inches. Round lathe-turned, slotted table. Weight 95 pounds.

Price each \$ 8.00

With Pulleys for Power 11.00

No. 92 Hand Feed Post Drill

This machine will drill to the center of a 12-inch circle and will drill a hole up to ¾ inches. The shaft is made of 1½-inch steel and has an up and down run of 3 inches. It is made of the best material, bearings ground out of solid metal; spindle fitted for ½-inch straight shank drills. Slotted swing table. Weight 55 pounds. Price each \$ 6.00

No. 93 Back Geared Post Drill Two Speeds

A strictly first class up-to-date machine, with every gear supplied with bushing on each side. Two speeds and lathe-turned, slotted, square table. Drills to center of 15-inch circle. Drills holes up to 1¼ inches. Diameter of spindle 1½ inches. Up and down run 3 in. Spindle bored to take ½-inch straight shank drills. Provided with full back gears and automatic self feed. Weight 125 pounds.

Price each \$10.00

With Pulley for Power 13.00

The Black Diamond Drill, also Nos. 92, 93, 96 and 98 will be bored to take ¼ or ½ inch Straight Shank Drills, to order

Buffalo Ball Bearing Post Drills

No. 961B—The gears on this drill are all machine cut and mesh perfectly. Bearings are all bored from the solid metal. Ball bearings are placed at end thrusts of all swiftly revolving parts. No loose joints, with consequent lost motion and noise. Two speeds, operated by shifting the collar. Two feeds, automatic and lever with instant, automatic return of drill spindle. A half turn of wheel changes feed from automatic to lever.

No. 941B—On this drill, the fly wheel speed is independent of the spindle, giving full momentum when most needed, on slow, heavy work. Table is attached to an adjustable rack, giving quick and easy adjustment of table or wheel-holder to any point of run. Gears are machine cut. Shafts and spindles are steel, run in journal bearings, bored and reamed in the solid metal of the frame. Two speeds and two feeds, same as on No. 961B drill described above. Fitted with Suregrip Chuck and ball bearings at end of feed screw, relieving 90 per cent of friction at this point.

No. 931B—A drill of large capacity and medium price, distinguished by large and heavy fly-wheel on top. Frame is neat, strong and well ribbed. Slotted table is easily adjusted to any point of run. Provided with machine cut bevel and spur gears, accurately fitted, giving smooth operation without lost motion. Two speeds, change obtained by sliding gears on spindle, up or down, to engage with upper or lower gear on fly wheel shaft. Ball bearings at end thrust of feed screw.

No. 931B Drill with Pulleys for Power

No.	Capacity, inches		Up and Down Run, inches	Run of Table, inches	Size of Pulley, inches	Height Over All, inches	Shipping Wt., lbs.	Price Each

No. 961B Drill with Hand Crank

Buffalo Drill Spindles are bored for ½-inch straight shank bits, but ¾ or 1-inch also furnished.

Champion Automatic Self Feed and Compound Lever Feed Drills

No. 200½ Post Drill

This is a powerful, medium priced blacksmith drill. Special attention is called to the Double Compound Lever-Feed with which this drill is equipped, which produces fully 80 per cent more pressure at the point of drill than any other power or hand drill not provided with this feature. This Double Compound Lever-Feed is entirely independent of the Automatic Self-Feed. The feeds are interchangeable and can be changed from one to the other instantly.

With either feed, the drill spindle has instantaneous return of the drill bit out of the hole drilled and again instantaneous return on to the material being drilled for the next hole. The drill spindle and bit are positively always raised up or down while using either feed by the use of the quick acting lever.

It has two speeds; the change from slow to fast or heavy to light work is accomplished by sliding the gears which requires but an instant. All end friction is taken from the drill spindle by the use of ball bearings, making the drill very quiet and easy running. The lever makes it especially convenient for wood boring. Drills to center of an 18-inch circle. Spindle 1¼-inch in diameter. Up and down run 5½ inches. Spindle bored like Never-Slip Chuck for ½-inch straight shank bits. Drills holes up to 1½ inches.

No. 200½. Champion Post Drill for hand only. Weight 240 pounds. Price.....\$30.00

No. 200½. Champion Post Drill with 11 x 2½-inch tight and loose pulleys for power and hand combined. Price.....34.00

No. 203 Post Drill

This is an excellent drill for blacksmith shops, garages, carriage and wagon shops for use with hand or power, or combined. It has all the advantages of the No. 200½ described in the opposite column, and in addition has an upright flywheel. Table is raised and lowered by rack and pinion. The upright flywheel shaft runs on frictionless end thrust ball bearings. End thrust bearings are also provided on spindle.

It has double back cut gears with two speeds. In its entire construction and design this drill is a powerful machine for all kinds of shops where a strictly high grade machine is wanted. The lever makes it especially convenient for wood boring.

Spindle is 1¼ inches in diameter and is bored like Never-Slip Chuck to take ½ or 41/64-inch straight shank bits or for ½-inch bits if so ordered. Up and down run 5½ inches. Drills holes up to 1½ inches and to center of 21-inch circle. Pulleys are 11 x 2½ inches and are designed to revolve at 80 R. P. M. A wheel hanger is furnished for drilling painted wheels, and the table, when not being used can be turned back out of the way.

No. 203. Champion Post Drill for hand only. Weight 400 pounds. Price.....\$50.00

No. 203-T. Champion Post Drill with 11 x 2½-inch tight and loose pulleys for hand and power combined. Price.....54.00

No. 203-C. Champion Post Drill with cone pulleys and cone countershaft for hand and power combined. Weight 450 pounds. Price.....65.00

No. 200 Post Drill

This drill is made with Automatic Self-Feed and Double Compound Link and Rack Lever-Feed which are independent of each other and can be changed from one to the other in an instant. It has two speeds with three gears in order to give the second speed same turning direction of the crank as first speed. All end friction on the drill spindle is eliminated by ball bearings, making it a very light running drill.

Drills to center of 16-inch circle and holes up to 1¼ inches. Spindle is 1¼-inch in diameter with up and down run of 4 inches and bored for ½-inch straight shank drills or ½ or 41/64-inch bits is so ordered.

No. 200. Champion Post Drill for hand only, weight 180 pounds. Price.....\$25.00

No. 200. Champion Post Drill with 6 x 2-inch tight and loose pulley for hand and power combined. Price.....28.00

No. 201 Post Drill

The No. 201 Champion Post Drill will drill a 1-inch hole in cast iron with ease, owing to the new patented high pressure lever feed. It has two speeds which can be instantly changed by sliding the cut gears. Table is raised and lowered by rack and can be turned back out of the way.

Drills to center of 21-inch circle and holes up to 1½ inches. Spindle is 1¼-inch in diameter, up and down run 5½ inches, and bored for ½-inch straight shank bits or ½ or 41/64-inch bits if so ordered.

No. 201. Champion Post Drill for hand only, weight 375 pounds. Price.....\$40.00

No. 201. Champion Post Drill with 11 x 2½-inch tight and loose pulleys for hand and power combined. Price.....44.00

No. 203½ Upright Drill

This drill is precisely the same as No. 203 except that it gives the mechanic the benefit of having a drill that stands firm and solid on its own base.

With either lever feed or automatic self feed the drill spindle has instantaneous return of drill bit out of hole drilled and instantaneous return on to material being drilled, for the next hole, enabling operator to increase production. Same specifications as the No. 203.

No. 203½. Champion Upright Drill for hand only. Weight 600 pounds. Price.....\$70.00

No. 203½-T with 11 x 2½-inch tight and loose pulleys for hand and power combined. Price.....75.00

No. 203½-C with cone pulleys and countershaft for hand and power combined. Price.....85.00

When ordering be sure to state whether spindle should be bored for ½ or ¾ inch drill bits.

Western Chief Blacksmiths' Post Drills

No. 19

A low-priced combined Hand and Self-Feed Drill, adapted to ordinary shop use. Hand and self-feed operated independently. A good drill for wood boring. Size of pulleys, 8x2 inches. Should be run at about 190 revolutions per minute.

No. 7

This drill is a hand and power drill with cut gears. Has automatic self-feed, and fast and slow speed, which can be changed instantly. Size of tight and loose pulleys for power, 10 $\frac{3}{4}$ x2 $\frac{1}{2}$ inches. Drills should be operated at about 175 revolutions per minute.

No. 16

This drill is a ball-bearing drill with power attachment, hand-lever feed and horizontal, gear-driven positive self-feed. Each feed works independently of the other. Has cut gears and rack for raising and lowering table. Size of tight and loose pulleys, 10 $\frac{3}{4}$ x2 $\frac{1}{2}$ inches. Drills should be run at 175 revolutions per minute.

No. 16E

This drill has all the time and labor-saving features of the No. 16 Drill, and in addition is equipped with electric motor drive, which costs less than 25 cents per day to operate. No belts are necessary, the motor being directly connected with spur cut gears.

No.	Price for Hand Power Only	Price With T. & L. Pulleys	Price With Electric Motor	Drilling Circle, Inches	Drills Holes Size, Inches	Up and Down Run of Table, Inches	Up and Down Run of Spindle, Inches	Bored for S. S. Drills, Inches	Wheel Holder Attachment	Weight, Pounds

In these machines chuck is not separate but is attached to spindle.
In ordering, always state whether spindle is wanted bored for $\frac{1}{2}$ or $\frac{1}{4}$ straight shank drills.
We always furnish spindles bored for $\frac{1}{2}$ -inch straight shank drills unless otherwise ordered.

WIRE ROPE SECTION

A Section of Our Wire Rope Stock

Wire Rope—Grades and Constructions and Suggestions

Wire rope or wire cable, as some call it, is offered in different grades, different constructions and in sizes from 1-16 diameter (sash cord) up to 3 inches in diameter—sizes up to 2½ inch diameter, dredge cables being usually carried in our Chicago stock.

When doubtful as to the material to be used, the conditions under which the rope is to operate should always be given, in order that the proper construction and grade may be furnished. When possible, a rough sketch showing size and position of drums, sheaves and maximum load in pounds upon the rope, should be sent with the inquiry or order.

In designing a wire rope system of any sort, it is always advisable to use drums, sheaves and pulleys of the largest diameter practicable. Avoid high velocities and sharp bending, particularly reverse bending, all of which tend toward rapid deterioration of wire rope. Wherever possible, avoid overwinding on drums.

The larger the drum or sheaves, the longer the rope will last. Use grooved drum if possible.

The working loads for hoisting and haulage ropes should not exceed one-fifth the ultimate or breaking stress of the rope. The working load for standing or guy rope, however, may be somewhat exceeded. Where human life is at stake, the working load should be one-seventh or one-tenth of the strength of the rope.

To get more tonnage, increase the load, but not the speed, because wear of the rope increases with the speed.

The grooves of the drums, sheaves or pulleys should be perfectly smooth and uniform and of such shape that the rope cannot wedge. All sheaves or pulleys should be absolutely in line with the rope, so that it will not chafe on the sides of the groove.

Pulleys used for transmitting power should be lined with wood, leather or rubber. This will materially increase the life of wire rope, particularly where high speeds are necessary.

Do not subject wire rope to jerks or sudden stresses.

Galvanized ropes are not intended for general hoisting or running purposes. Bending over drums and sheaves will wear off the zinc and rust rapidly follows. Galvanized ropes have about ten per cent less strength than ungalvanized ropes.

To lubricate and protect wire rope from the weather, cover it with "Cabeline" dressing.

Unlike hemp or manila rope, wire rope should not be coiled or uncoiled, but must be wound or unwound as from a reel. It should be seized with soft iron wire on each side of the portion at which the cut is to be made to prevent the ends from untwisting.

Sizes of rope smaller than those published take same list price as smallest size listed.

Intermediate sizes of rope take list of next larger size.

Lay of Wire Rope

Regular Lay, Right Hand Rope
Always sent unless otherwise specified

Wires in the strands laid to the left, strands laid to the right.

Regular Lay, Left Hand Rope
Made to order only

Wires in the strands laid to the right, strands laid to the left.

Standard rope is made regular lay, right hand lay, unless otherwise specified. Lang lay rope, also left lay rope, take the same list prices and discounts as regular lay, right hand rope.

Coils or short pieces as ordinarily shipped.

Wire Rope or Cable

Wire rope or wire cable, is offered in 6 different grades, 11 different constructions and in sizes from $\frac{1}{16}$ inch diameter (sash cord) up to 3 inches in diameter—sizes up to $\frac{1}{2}$ inch diameter, dredge cables, being carried in our Chicago stock.

When doubtful as to the material to be used, the conditions under which the rope is to operate should always be given, in order that the proper construction and grade may be furnished. When possible, a rough sketch showing size and position of sheaves and maximum load in pounds upon the rope, should be sent with the inquiry or order.

Standard Wooden Reel. Reels contain 5 to 10,000 feet of rope, depending upon the size of rope.

Standard Construction Wire Hoisting Rope (6x19)

6 strands—19 wires to each strand—one hemp center

This construction is by far the most popular for ordinary work. It is pliable and will pass over reasonably large drums or sheaves. The crucible and extra strong crucible grades are used for ordinary hoisting, such as on derricks, small dredges, etc.

Where the loads are heavy and the service severe, the Standard Plow and Bullock extra quality Plow Steels meet the most exacting requirements. The iron rope is but little used except for transmission of power over small sheaves.

"Bullock" Extra Quality Plow Steel Hoisting Rope (6x19 Construction)

Made from drawn wires having a tensile strength of 225,000 to 280,000 lbs. per square inch of sectional area.

Bullock rope is the strongest and toughest wire rope obtainable—it is the best and cheapest that can be used where great strength and hard service is required. For dredges, steam shovels, stump pullers, well drills, railroad wrecking cars and ballast unloaders, heavy derricks—for rapid coal hoisting or wherever a rope is subjected to the severest pulling stresses or wear, Bullock rope will give the best of satisfaction. In this grade of rope the highest tensile strength possible is obtained without sacrificing the toughness, pliability and elasticity.

"Extra Flexible" Construction Wire Hoisting Rope, (8x19)

8 strands—19 wires to each strand—one hemp center

This rope has two more strands and smaller wires than the standard 6 strand rope. The large hemp center reduces the strength somewhat, but under certain conditions where great flexibility is required and the load is light, this construction, owing to its ability to withstand severe bending, retains its strength longer than the standard six strand rope.

Used on derricks, coal handling machinery, pile drivers, steam shovels and for tubing and casing lines in oil districts. For description of the several grades see 6x19 Construction.

"Special Flexible" Construction Wire Hoisting Rope, (6x37)

6 strands—37 wires to each strand—one hemp center

Designed for crane, dredge and other uses where strength and extreme flexibility are essential.

The wires are of a necessity finer than those of 6x19 or 8x19 constructions and this rope consequently must not be subjected to as much abrasive wear.

This rope is used largely on overhead traveling cranes. For description of the several grades see 6x19 Construction.

"Reliance" Elevator Hoisting Cable (Genuine Imported Swedes Iron)

6 Strands of 19
Wires Each One
Hemp Center

For Elevator Hoisting and Counterweight Cables

We guarantee that our Reliance rope is made of wires drawn from the finest Swedish Charcoal Iron Rods. These wires are uniform in strength, tough, pliable and elastic. The quality of wire used in our Reliance cables and the construction of them is the result of many years' experience.

The finished rope is the finest that can be made for elevator purposes, as the wire will wear without hardening and will not crack and stick out as do the wires in many ropes that have been in service but a short time. As the safety of human life is dependent upon the use of cables in elevators, the greatest care should be used in their selection. Factor of safety should be one-seventh to one-tenth of the breaking strength of the rope.

Where ropes are used in pairs, we can supply left laid rope; otherwise we furnish right hand rope.

Where the sheaves are small this rope is sometimes used for transmission or power.

Diameter, inches	1 1/4	1 1/2	1 3/4	2	2 1/4	2 3/4	3	3 1/2	4
Approximate strength, pounds	2,200	3,000	4,800	7,800	12,000	17,000	23,600	29,000

Reliance Swedes Iron Tiller or Elevator Rope (6x6x7)

6 strands of 42 wires each—252 wires in all—7 hemp cores.

The 3/4, 1 1/2 and 1 3/4-inch sizes are used for starting and stopping elevators and called "elevator shipper rope."

This is an exceedingly flexible rope, capable of bending over very small sheaves. Being composed of very fine wires, however, it will not stand much abrasive wear and loads should be light.

Diameter, inches	1 1/4	1 1/2	1 3/4	2	2 1/4	2 3/4	3	3 1/2	4
Approximate strength, Reliance Iron, pounds	1,300	1,900	3,000	5,800	7,000	11,000	15,500	22,000

Transmission Haulage or Standing Rope

6 strands—7 wires to each strand—one hemp core

The coarse wires in this construction resist abrasion and corrosion to the greatest possible extent. It makes a very stiff rope, however, and when used for transmission of power, the sheaves must be very large. Haulage rope is used for mine haulage, conveyors or inclined planes. Standing or Guy ropes usually furnished galvanized.

"Bullock" Special Construction Wire Rope

Made from drawn wires having a tensile strength of 220,000 to 280,000 lbs. per sq. inch.

Type A. 5 strands—28 wires to strand—1 hemp core

Type B. 6 strands—25 wires to strand—1 hemp core

Bullock Flattened Strand (Lang's Lay) Wire Rope

These peculiar forms of construction produce a combination of flexibility with increased wearing surfaces which makes them particularly efficient in certain service. Type A—this rope in sizes smaller than 1½ inch is used for general hoisting. Type B is used in all sizes for hoisting, dredging, haulage systems, logging, etc.

Type A—5 x 28 Construction

Diameter	inches	1½	1¾	2	2¼	2½	3	3½	4	4½	5
Price	per foot	\$0.20¾	\$0.25	\$0.28	\$0.37½	\$0.49	\$0.60	\$0.71	\$0.89	\$1.12	\$1.37

Bullock Non-Spinning Plow Steel Hoisting Rope

18 strands—7 wires each—1 hemp core

Especially adapted for single line derricks, mine shaft sinking, grab bucket dredging, etc.

Holds the load still without spinning or untwisting. Should not be loaded as heavily as ordinary hoisting rope if best results are to be obtained.

Should be fastened with socket connections.

Diameter	inches	1½	2	2½	3	3½	4	4½	5	5½	6
Price	per foot	\$0.17	\$0.22½	\$0.31	\$0.39	\$0.50	\$0.62	\$0.75	\$0.90	\$1.10	\$1.37

Showing 6 x 37 construction, special flexible

Bullock "Steel Clad" Dredge Rope

Ropes of this construction may be used for unusually severe conditions of service where the additional wearing surface due to the flat steel strips, spirally served, materially increases the durability of the rope thus employed. Recommended particularly for dredging and similar difficult conditions.

6 Strand—19 Wire Construction

Diameter over serving	inches	1½	2	2½	3	3½	4	4½	5	5½	6

Endless Wire Rope Transmission Belts

We splice endless wire rope belts properly and promptly. The splice, as we make it, is the same diameter as the rest of the cable—a very important feature—the rope is laid back for at least 10 feet on each side of center of the splice which takes 20 to 30 feet of extra rope.

The charges below are for labor making the splice only and does not include the 20 to 30 feet of extra cable.

Prices for Splicing Endless Wire Ropes

Diameter of rope, inches.....	$\frac{1}{4}$ to $\frac{3}{8}$	$\frac{3}{8}$ to $\frac{1}{2}$	$\frac{1}{2}$ to $\frac{3}{4}$	$\frac{3}{4}$ to $1\frac{1}{8}$	$1\frac{1}{8}$ to $1\frac{1}{4}$
Price for splicing, net.....	\$2.50	\$3.00	\$3.50	\$4.00	\$4.50

Exact length of endless rope must be given or the exact distance between centers of sheaves and the diameter of both sheaves—measured with a steel tape.

“Bullock” Locomotive Wire Switch Rope

Made of Bullock finest quality Plow Steel Cable, spliced in the best possible manner—our ropes do not pull out in the splice—the weakest point.

Will out-pull and out-wear others.

Shows two Links and Thimble one end, Hook and Link in other—can be supplied with thimble and link in one end and thimble and hook in other—as desired.

Length in Feet	Diameter in Inches								
	$\frac{3}{4}$	$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{3}{8}$	$1\frac{1}{2}$	$1\frac{5}{8}$	$1\frac{3}{4}$

Ballast Unloader Cables

Used with Locomotive or Lidgerwood Unloaders for pulling ballast plops over dirt trains—they are subjected to excessive stresses and great abrasive wear and the best obtainable rope is none too good—we have furnished our Bullock Unloader Ropes to railroads for many years. The sizes are usually 1 to 2 inches in diameter with hook on one end as shown on Bullock Switch Ropes. Prices upon request.

Wire Rope Slings

Wire rope slings are fast coming into use for handling heavy loads with traveling cranes, jib cranes, etc.

These slings are considerably lighter than chains, can be obtained more quickly and the cost is less—furthermore in wire rope slings, the wear can usually be seen when the strands become frayed, loose or cut—defects in a chain are harder to find.

Slings can be made any style desired with single eye or swivel hooks or plain links spliced in, or with hook with socket babbitted in with loop each end, or endless as shown.

Prices quoted upon request.

Endless Sling

Extra Galvanized

Flexible Wire Sash Cord

6 strands—7 wires
to each strand—one
cotton core

Galvanized by special process—the galvanizing does not crack or chip off. The construction makes a very flexible cable—used largely for window weights, bell-cords, automobile brakes, whistle cords, for electric open car curtain fixtures, also steam car curtains and Pullman bunks.

Diameter	inches	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{3}{16}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$
Approximate strength	lbs.	140	320	550	1400	1800	2200	
Approximate weight per 100 feet	lbs.	6	1.4	2.5	5.6	7.7	10.1	
List price	per 100 feet	\$1.75	\$2.00	\$2.25	\$3.00	\$3.50	\$4.00	

Copper and Phosphor Bronze Wire Cord

Diameter	inches	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{3}{16}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$
Copper list per 100 feet		\$3.00	\$3.50	\$4.50	\$6.00	\$7.50	\$9.00	
Phosphor-bronze list per 100 feet				6.00	8.00		12.00	\$15.00
								\$22.00

The Phosphor-bronze cord has 6 strands, 19 wires, to each strand and hemp core.

Galvanized Steel Wire Guy Strand

Extra Galvanized

Seven steel wires
twisted into a single
strand

This strand is used chiefly for guying poles and smokestacks, for supporting trolley wires and for operating railroad signals. This rope is very stiff, as it has but seven solid wires. For larger guy rope, see 6x7 construction galvanized.

Diameter	inches	$\frac{3}{16}$	$\frac{1}{4}$	$\frac{5}{16}$	$\frac{3}{8}$	$\frac{7}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{3}{4}$

List price	per 100 feet	\$2.75	\$3.50	\$5.00	\$6.00	\$7.00

"Cabeline"

A Lubricant and Protector for Wire Ropes
Particularly Adapted for Elevated Cables

Wire rope is often put into service and used severely without care or protection of any kind, and cases are not infrequent where ropes suddenly break while the outside wires show no sign of wear. To get full service from wire ropes each wire, each strand and the whole rope must be kept in perfect condition as the condition of the outside wires does not show how much the inner ones are worn.

Cabeline takes care of both internal and external lubrication. Rust destroys more quickly than hard work.

Cabeline is free from mineral acids—so destructive to iron and steel, and which is much in evidence in the common oils and greases often used to protect wire ropes.

Cabeline is applied while heated and in a liquid state, and so finds its way between the wires and penetrates to the heart of the rope—it then solidifies, forming an adhering coating around each wire and around the whole rope—preventing internal friction—rusting—also outside chafing against the pulleys over which it runs.

Prices

In 5 and 10-lb. tin cans, per lb.	\$0.40
In 25, 40 and 75-lb. wooden kits, per lb.	.35
In half and full barrels, per lb.	.25

"Gripwell" Wire Rope Clips

Japanned—Malleable Iron Saddles

A well designed wire rope clamp of great holding power, with malleable iron saddle or block grooved for sizes of rope listed. The sides are extended high enough to contain two ropes, keeping them in alignment and supporting "U" bolt which is of open-hearth steel

The clips are attached as shown below—two clips are recommended up to $\frac{5}{8}$ —three up to 1 inch and four for larger ropes.

Size and diam. of rope, inches...	$\frac{1}{4}$	$\frac{5}{16}$	$\frac{3}{8}$	$\frac{7}{16}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{1}{2}$

"Bullock" Wire Rope Clips

Drop Forged Steel Saddles

A wire rope clip is a safety device—upon its strength and gripping qualities depends the safety of your workmen and machinery. The Bullock clip is the best obtainable.

These clips have wider saddles giving greater bearing on the rope besides having the sides extended to contain two ropes as shown below.

Diam. of rope, inches...	$\frac{1}{4}$	$\frac{5}{16}$	$\frac{3}{8}$	$\frac{7}{16}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{3}{8}$	$1\frac{1}{2}$

Channon Manila Rope

Ajax 4 Strand Rope

Only one strand combed out to show length and strength of fibre.

AJAX

The strength and color of the fibre, the two most important qualities, are determined largely by the manner in which it is cleaned. Good quality fibre is from 8 to 17 feet in length, of glossy white color, very light and strong and of clean, even texture—it is its admirable qualities in the *higher grades* that has given Manila hemp an undisputed rank as the "premier cordage fibre of the world."

By far the greatest usefulness of Manila rope is for hoisting—and wherever loads are handled you will find men about—hoisting, directing or placing the load. They must rely upon the strength of the rope—should the rope part—one or more might be seriously injured—further—the damage to the piece dropped is usually much greater than the price of the rope.

Manila hemp (*Abaca*) is the premier cordage fibre of the world—it is grown successfully in but one small section of the globe—the Philippine Islands.

It is a structural fibre obtained from the leaf sheath of the plant *Musa Textilis*—a tree-like herb that grows 16 to 33 feet in height.

About 14 varieties of the plant are under cultivation in the leading provinces from which are obtained as many as 30 to 40 different grades or "Marks" of hemp.

We handle nothing but good quality, dependable rope—not a pound of "off-grade" rope can be found in our immense stock, we do not sell any of the grades known to the trade as 2nd, 3rd, 4th, (or hardware grade), they are unsuitable for hoisting or hauling.

Besides being made of good hemp it is necessary that great care be exercised during the process of manufacture. All twisting strains must be carefully balanced, every fibre, yarn and strand should pull equally and together—a well made rope has no tight strands—the tension, lay and size are uniform and perfect.

We have been selling good rope for over forty years.

We Handle Two Grades Only

Channon No. 1 Manila Rope

For ordinary service.

Our Channon No. 1 grade is guaranteed to be a strictly pure, unadulterated, first quality product carefully made from clean, good, genuine Manila hemp fibre with just enough lubricating oil to lay it up properly. There are no cheaper fibres mixed with it, nor any other adulterants to add weight—as a result, this rope is light, strong and uniform throughout. With the exception of our Ajax brand, there is no better rope made.

We do not handle any of the cheaper grades known as 2nd, 3rd, 4th or "Hardware" grades; they are unsuitable for hoisting or hauling.

Ajax Manila Rope

For Transmission of Power and other hard service.

Ajax is the strongest and finest of all ropes made of Manila Hemp—***nothing better can be obtained anywhere at any price.***

Ajax is made from a specially selected, highest quality, long fibre Manila hemp which has had all the knots, tow and other weak parts carefully "combed" out of it before it is spun into yarns. Ajax rope is higher in price than common rope but is well worth the difference and will prove the most economical in the end.

Channon No. 1 Standard Manila Rope

Three Strand
Regular
Construction

Four Strand
Tallow Laid
with Core

For Ordinary Hoisting and Hauling

Carefully made from a superior quality of clean, pure manila hemp—with just enough oil to lay it up properly. There are no cheaper fibres mixed with it—nor any other adulterants to add weight—as a result this rope is light and uniformly strong throughout. Suitable for all ordinary service of hoisting, hauling, etc. There is only one grade of rope better than our No. 1 Grade, and that is our Ajax brand described below.

Three Strand Regular Construction

Put up in standard length coils of 1200 feet and half coils of 600 feet—from which we can supply any length desired. (Cut pieces take 1 cent per pound advance.)

Diameter, in inches	3/8	1/2	5/8	3/4	7/8	1	1 1/8	1 1/4	1 1/2	1 3/4	2
Approx. Breaking Strength, pounds	1,100	1,300	2,400	4,000	4,700	6,500	8,000	10,000	12,500	17,500	25,000
Nominal Working Load, pounds	275	325	580	1,000	1,200	1,600	2,000	2,500	3,000	4,000	6,000
Approx. Weight per 100 feet, pounds	2 1/2	4	8	14	17	23	28	36	42	60	90
Extras over base, per pound	\$0.01	\$0.01	\$0.00								

(Base price 1/2¢ and all larger sizes)

Four Strand Tallow Laid with Core

Diameter, in inches	1/2	5/8	3/4	7/8	1	1 1/8	1 1/4	1 1/2	1 3/4	2
Approx. Weight per 100 feet, pounds	9	13	18	27	33	42	50	70	100	125
Extras over Base, per pound	\$0.01	\$0.01								

All 4 strand rope takes 1 cent per lb. advance over base price

Ajax Long Fibre Manila Rope

Three Strand
For Hoisting
and Hauling

Four Strand
for Transmission
of Power

For Transmission of Power, Car Pulling, Pile Driving and Other Hard Service

Trade Mark—A tarred brown yarn—running through the strands

Our Ajax rope is the finest of all ropes made from Manila hemp—nothing better can be had at any price. Not only is it the best investment where strength, safety and durability are considered, but it is a much easier rope to handle—it is smoother—smaller sized yarns are used to make up the strands and the fibre, which is carefully selected for strength and length, goes through several more operations before it is spun into the "yarns."

Diameter in inches	1/2	5/8	3/4	7/8	1	1 1/8	1 1/4	1 1/2	1 3/4	2
Approx. Breaking Strength, pounds	3,000	5,000	5,500	8,000	10,000	13,500	16,000	20,000	22,000	32,000
Nominal Working Load, pounds	750	1,200	1,400	2,000	2,500	3,400	4,000	5,000	5,500	9,000
Approx. Weight per 100 feet, pounds	9	15	18	27	33	42	50	65	70	100
Extra over Base, per pound	\$0.01	\$0.01								

Four strand invariably furnished for transmission, 3 strand for hoisting and hauling—both furnished at same price.

"Champion" Hawser Laid Manila Well Drilling Rope

Nine Strand Rope
Left Laid—Hard
Twist

Trade Mark
A Purple Red Yarn
Running Through
the Strands

For Blast Hole Drilling, Water and Oil Well Drilling, also Caisson Work, Car Pulling and Elevator Governor Ropes

This rope is well known to drillers—we have sold it under this brand for 25 years. Our distinguishing mark is purple red yarn in each of the strands—rope with this mark will drill more "feet of hole" than any other rope made. Well drilling is about the hardest service we know of and it is highly important that the rope be well made and contain the finest Manila hemp—our Champion brand may be relied upon in every way. Construction is what is known as "nine strand" left laid and hard twist, consisting of three 3-strand right hand laid ropes laid up to the left. We carry Champion drilling rope in 1,200 foot standard coils from which any length may be cut at prices below.

Diameter, in inches	3/8	1/2	5/8	3/4	7/8	1	1 1/8	1 1/4	1 1/2	1 3/4	2
Approx. Weight per 100 feet, pounds	16	20	30	37	49	60	68	78	95	120	140
Extra over Base, per pound	\$0.01										

1/2¢ and larger, base price

Larger diameter and lengths longer than 1200 feet come under oil well classification and are shipped from mill at market prices.

AJAX

Manila Rope

Each Coil of Ajax is carefully burlapped all over to protect it from chafing, and to keep it clean.

A numbered tag is attached to each coil with the request to send us the number at once if the rope is not received in perfect condition—the number gives us a record of each coil with date of manufacture.

Approximate Weight and Strength of New Ajax Manila Rope

Diameter.....inches	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{3}{8}$	$1\frac{1}{2}$
Approx. wt. per 100 ft.lbs.	9	15	18	27	33	42	50	65	70
Approx. breaking strength.lbs.	3,000	5,000	5,500	8,000	10,000	13,500	16,000	20,000	22,000
Diameter.....inches	$1\frac{3}{4}$	2	$2\frac{1}{4}$	$2\frac{1}{2}$	$2\frac{3}{4}$	3	$3\frac{1}{2}$	4
Approx. wt. per 100 ft.lbs.	100	125	170	200	240	300	400	500
Approx. breaking strength.lbs.	32,000	37,000	50,000	55,000	65,000	75,000	90,000	130,000

Safe working load of new rope about one quarter of above table.

Horse-Power Transmitted by Manila Ropes

Work Strain=200 d² Pounds

d=Diameter of Rope in Inches

Diam. of Rope, Inches	Speed of the Rope in Feet per Minute											
	1000	2000	2500	3000	3500	4000	4500	5000	5500	6000	6500	7000
$\frac{5}{8}$	1.24	2.70	3.30	3.83	4.30	4.74	5.01	5.20	5.29	5.08	4.74	4.12
$\frac{3}{4}$	2.25	3.84	4.71	5.46	6.23	6.83	7.24	7.47	7.60	7.32	6.83	5.93
1	3.57	6.84	8.38	9.80	11.09	12.15	12.89	13.29	13.53	13.10	12.13	10.54
$1\frac{1}{4}$	5.59	10.68	13.10	15.39	17.33	18.98	20.15	20.76	21.14	20.36	19.00	16.47
$1\frac{1}{2}$	8.02	19.39	18.86	21.87	24.94	27.33	29.00	29.89	30.43	29.32	27.34	23.72
$1\frac{3}{4}$	10.85	20.93	25.66	29.74	34.03	37.17	39.45	40.65	41.39	39.77	37.21	32.26
2	14.20	27.36	33.54	38.88	44.35	48.59	51.57	53.15	54.11	52.12	48.63	42.18

The table shows the effect of centrifugal force in diminishing the power transmitted under an assumed working tension, and would indicate that with tensions of 200 d² pounds the speed should not exceed 5500 feet per minute.

Splicing Transmission Ropes

We have at all times an efficient corps of expert rope splicers which we send out to any part of the country to install and splice our Ajax transmission ropes.

Ajax Manila

Switch and Wrecking Ropes

The hooks, links and thimbles are hand forged in our own shops; are of special design and extra heavily proportioned.

All of our ropes are spliced in the very best possible manner, by men of long experience in this class of work.

Usual Lengths	Diameter of Ropes, Inches	Price of Ajax Ropes
30 to 50 ft.	$2\frac{1}{2}$ inch	\$.....
30 to 50 ft.	3 inch
30 to 50 ft.	$3\frac{1}{2}$ inch
30 to 50 ft.	4 inch
30 to 50 ft.	5 inch

We make Switch Ropes any length or diameter.

The Specification

to completely cover the finest and stongest Manila hemp rope obtainable.

May be summed up in just one word—"Ajax"

Trade Mark
A tarred brown
yarn in the strands

The first modern grain elevator in England, that of the Manchester Ship Canal Company was Ajax equipped throughout. After six years the general superintendent wrote under date of June 9th, 1904:—

"The Ajax ropes used in our Elevator have given complete satisfaction so far; in fact, the long main drive and most of the other principal drive ropes, installed originally SIX YEARS AGO are still working well."

Besides transmitting power, Ajax ropes are used to a large extent for:

- Extra heavy hoisting and hauling.
- Hammer lines for pile drivers.
- Railroad wrecking and switch ropes.
- Towing and other particularly hard work.

The hemp used in Ajax is exceptionally strong, tough and uniform in quality. When placed alongside the common grades of Manila hemp rope, the difference is obvious even to the novice—it has a peculiar bright appearance—it looks "alive" and it is.

Our policy, steadily pursued since the inception of Ajax, 25 years ago, has been to make it the very best rope that the best material and the most skillful workmanship can produce—Ajax is the rope with a character—it has a reputation to sustain.

We have only one other grade of Manilla rope which is called *Channon No. 1 quality*, this grade is recommended for all ordinary work of hauling and hoisting and we guarantee it to contain not only strictly pure and unadulterated Manila hemp but to be first quality in every respect.

The most economical rope to use for transmission of power and other hard service.

2,000 H. P. Drive—44, 2 inch diam. Ajax Transmission Ropes—English System. Drive Sheave is 7 ft. 5½ in., Driven is 23 ft. in diameter and weighs 230,000 lbs.

Ajax Rope Drive in Large Steel Mill

The rope drive machinery, shown above, in the new Shear Plate Mill of The Inland Steel Co. at Indiana Harbor, Ind., was furnished by the Mesta Machine Co. of Pittsburgh; the Ajax transmission ropes were furnished and installed by the H. Channon Company.

This new mill will enable the steel company to add a full line of car and tank plates to its already extensive output.

To provide the additional steel necessary for this new mill four new 60-ton open-hearth furnaces have been constructed, making a total of 12, with a maximum capacity of 700,000 tons a year. The new 90-inch three high mill has a capacity of 450 tons in 24 hours and can roll plates from 8 gauge to ¾ inch in widths up to 80 inches, and lengths up to 40 feet.

Power for operating the mill is furnished by a 2,000 H. P. Westinghouse, Constant Speed 245 R. P. M., motor, 25 cycle, 3 phase 2,200 volts; current is taken from a low-pressure turbo-generator station.

The motor is connected up through a rope drive consisting of 44 2-inch diameter Ajax ropes. The rope sheaves are 40 feet apart, center to center, the driver is 7 feet 4½ inches, the driven sheave is 23 feet diameter, weighing 230,000 pounds. At 80 R. P. M. the rim velocity is 5,780 feet per minute and the energy equivalent to 20,400,000 foot pounds.

We also furnished and installed the rope drives when this plant was first opened, 12 years ago. Ropes are dressed with our well known Magnolia Rope Dressing.

Ajax is absolutely the finest of all ropes made from Manila hemp—nothing better can be obtained anywhere—at any price.

It is the most economical rope for transmitting power.

Loop Spliced In.

Fig. F374 Endless Sling with Short Splice

We make slings of both No. 1 and Ajax Manila Rope of any length or diameter. Slings are usually measured, doubled, and stretched out. Illustration shows an endless Manila rope sling with a short splice—we also make them with "Long Splice," which takes 20 to 30 feet of rope for the splice which is then the same diameter as the rest of the rope. Prices upon request.

We splice any kind of fitting into Manila ropes—properly and promptly. We have at all times an efficient corps of expert rope splicers which we send out to any part of the country to install and splice Ajax Transmission Ropes.

"Magnolia" Rope Dressing

For Manila Hemp Ropes

It is the only dressing made that penetrates to the center of a transmission rope, thoroughly lubricating the fibre there, besides protecting the outside of the rope. Money spent in caring for and protecting your transmission rope is money saved.

In 5 and 10-pound tin cans, per pound \$0.40
In 25, 40 and 75-pound wooden kits, per pound35
In half and full barrels, per pound25

Transmission ropes are at all times subject to many conditions which tend to hard wear and short life; internal wear, caused by the chafing of the fibres, and external wear caused by contact with the pulleys, soon takes the life and strength out of a rope. Rapidly moving ropes are in an ever-changing circulation of air, which, together with the continual bending open of the strands, causes rapid evaporation of any lubricant with which the rope may have been originally treated. Manila fibre, which is naturally tough and strong, is, when dry, rough and harsh, but, when treated with a perfect lubricant, becomes smooth and silky.

The following quotation from a professor of mechanical engineering who has made careful, actual tests may be of interest. He says: "A manila rope with the fibre properly lubricated, will, under the same conditions, outlast from two to four similar dry ropes."

Hooks for Manila Rope

Large Eye—Forged Steel—Japanned

These hooks have eyes large enough for a Manila hemp rope to pass through.

Safe working load about one-fourth of above strengths.

Contractors' Guy Turnbuckles

Forged Steel—Japanned

Fig. 226 with Two Eyes. Right and Left Threads

This is the strongest form of turnbuckle for taking up slack in wire guy ropes, etc. From the strengths and working loads given, the proper size is readily selected, which in every case should be equal to the strength of the guy rope used. Where greater take-up is desired two turnbuckles are sometimes used.

"Bullock" Dredge Chain

Finest Quality—Hand Made—Carefully Tested

A chain is only as strong as its weakest link. When you have bought a piece of Bullock chain you have complied with all the necessary safety requirements—as it is the best chain made—it is carefully inspected both before and after making and tested to the proof tests given in table below.

Bullock is the chain to use for sling and derrick chains—where workmen's lives may be endangered—or where expensive machinery may be damaged by falling loads, for dredges and steam shovels it will wear longer and give better results than any other chain made.

Made of a special knobbled dredge iron, re-rolled and double refined, with an average tensile strength of 52,000 pounds to the square inch—it has a very high elastic limit.

The welding of Bullock chain is entrusted only to the most competent workmen.

Size iron	inches	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{4}$	1 $\frac{1}{2}$	1 $\frac{3}{4}$	2
Standard pitch	inches	1 $\frac{1}{2}$	1 $\frac{3}{4}$	2	2 $\frac{1}{2}$	2 $\frac{3}{4}$	3 $\frac{1}{2}$	4
Outside length	inches	2 $\frac{3}{4}$	3	3 $\frac{1}{2}$	4	4 $\frac{1}{2}$	5 $\frac{1}{2}$	6 $\frac{1}{2}$
Outside width	inches	1 $\frac{1}{4}$	1 $\frac{1}{2}$	1 $\frac{3}{4}$	2	2 $\frac{1}{4}$	2 $\frac{3}{4}$	3 $\frac{1}{4}$
Approximate breaking strength	pounds	17,000	25,000	36,000	48,000	61,000	78,000	95,000
Proof test	pounds	8,500	12,000	18,000	24,500	32,000	40,000	49,000
Average safe working load	pounds	4,000	7,200	10,800	14,700	19,200	24,000	29,500
Average weight per foot	pounds	3	4	5 $\frac{1}{4}$	8	10	13	16
Price	per 100 lbs.							

The pitch is the distance from the center of one link to the center of the next which is equal to the inside length of the link. Larger chain can be furnished up to 2 $\frac{1}{2}$ inch. Prices upon special request.

Standard Coil Chain

"BBB" Quality—Close Link—Tested Crane Chain. Made of extra quality material, welded with special care and dollyed. Certificate of test furnished to proof test shown in table below. Used for quarry, derrick and sling chains.

"BB" Quality Chain. We do not carry this grade in Chicago stock—mill shipment only. Made of good quality iron and closer link than common grade below.

"Common" or "Proof" Chain. This is a good commercial chain for general use.

Working Loads should be one-fifth to one-third of approximate breaking strengths given.

Hooks and Rings for sling chains should be made of the best refined iron and will appear clumsy and out of proportion to the size of the chain when made of equal strength. For example, a hook for $\frac{3}{4}$ -inch chain should be made of 2 $\frac{1}{4}$ -inch iron and weigh about 20 pounds. Rings, if less than 6-inch diameter, should be made of iron twice the size of the chain and if larger in diameter, size of iron must be increased in proportion.

The life of a chain can be prolonged by frequent annealing and lubrication.

Galvanized Chain can be supplied to special order.

Twist Link Coil Chain

Carried in $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$ and $\frac{1}{2}$ -inch sizes only, Common Grade.

For strength and safety, specify Bullock Dredge Chain.

"Bullock" Sling Chains

Finest Dredge Quality—Hand Made—Tested

For crane and derrick work where heavy loads are moved over the heads of the workmen, nothing but the finest quality of dredge chain should be used. Our Bullock chain will insure a higher degree of safety than any other chain made.

We can supply sling chains in any of the other qualities of chain listed on preceding page, but the Bullock grade is recommended and the cost is but slightly greater.

The rings and hooks are made of best refined iron and in proportion to the strength of the chain.

Size of Chain, Inches	Std. Length, Feet	Nom. Cap., Tons	Size of Hook, Inches	Weight Chain Only, per Foot	Approx. Weight		Price Fig. 110 Sling Chain	Price Fig. 220 Twin Chain

"Bullock" Wrecking Blocks, with Lashing Shackles

Size of Block, Inches	Size of Rope Diameter, Inches	Two Single Blocks		Two Double Blocks		Two Triple Blocks	
		Breaking Strain of Shackles in Lbs.	Breaking Strain of New Rope in Lbs.	Breaking Strain of Shackles in Lbs.	Breaking Strain of New Rope in Lbs.	Breaking Strain of Shackles in Lbs.	Breaking Strain of New Rope in Lbs.
18	2 1/4	116,300	67,600	132,532	135,200	155,542	202,800
20	2 1/2	132,532	78,400	155,542	156,800	172,400	235,200
22	2	155,542	115,600	172,400	231,200	235,620	346,800
24	3 1/2	172,400	192,000	235,620	384,000	265,955	576,000

One-third the strength of New Rope is considered the proper working load, but on larger rope for extra heavy continuous duty, at least four or five should be figured.

What one man should hoist with a pair of Blocks pulling hand over hand:

With a rope over a stationary sheave, one man will hoist nearly half his weight, averaging 75 lbs., barring friction. Friction reduces this force to about 60 lbs. if the sheave be self-lubricating bronze bushed, and to about 50 lbs. if the sheave be common, or iron, bushed. Each sheave in the lower or movable block multiplies this force by two, so that one man should hoist with a pair of blocks as follows:

Single iron bushed.....	100 lbs.	Single S. L. bronze bushed.....	120 lbs.
Double iron bushed.....	200 lbs.	Double S. L. bronze bushed.....	240 lbs.
Triple iron bushed.....	300 lbs.	Triple S. L. bronze bushed.....	360 lbs.

We would call your attention to the fact that it takes three men to hoist with a pair of single blocks the same load one man will hoist with a pair of triple blocks.

MAXIMUM WORKING LOAD FOR TWO DOUBLE BLOCKS AND NEW MANILA ROPE

Regular or Light Pattern, Wood Shell

Size of blocks.....	5	6	7	8	9	10	12
Load, lbs.....	250	350	600	1,200	2,000	4,000	10,000

Heavy or Thick Mortise, Wood Shell

Size of blocks.....	8	10	12	14	16
Load, lbs.....	2,000	6,000	12,000	24,000	36,000

A set of double and triple blocks will hoist considerably more, and a single and double will hoist correspondingly less. The above estimate load is close to the danger line, and it is well to figure on using somewhat heavier blocks and rope, especially on the larger sizes.

Light Pattern Manila Rope Blocks

Hard Wood Shells, Inside Iron Straps, Round Loose Hooks

These are the lightest wood blocks we have. As the hooks, straps and pins are light, these blocks are recommended for hand hoisting only, and for light loads and occasional use.

For estimated strength of hooks and rope, see preceding page. It will be noted that to secure the full strength of the rope, heavier blocks must be used, see below.

Manila rope increases in size with use, and as the diameter of rope here given is the largest the block will take, it is common practice to order blocks at least one size larger than the rope sizes stated in second column. Ordering next size larger also gives you larger hooks, straps, etc.

Fig. 101
Single with
Becket

Fig. 102
Double, no
Becket

Fig. 103
Triple with
Becket

"Becket," this is the part of the lower end of the block upon which the standing part of the rope is fastened.

Only one block of a pair requires a becket, usually the block with the least number of sheaves.

Beckets are supplied on all singles, one-half of the doubles and one-third of the triples. When more beckets are desired an extra charge will be made.

"Bushings" of blocks.

The Plain Bored, "Common" or "Iron Bushed" sheaves are plain bored for pin. They have no "bushings."

The "Roller Bushed" sheave has a cage roller bushing with 6 rollers—used chiefly for hand over hand hoisting—Painters Falls, etc., carried up to 8 inch only.

"Wide Mortise" Manila Rope Blocks

Hard Wood Shells, Inside Iron Straps, Round Loose Hooks

Medium Weight, between "Light Pattern" and "Bullock" Blocks

These blocks are heavier than our light pattern shown above and have wider mortise (thicker wood), are double cross-bolted through the wood shells, and also have heavier hooks and straps.

For estimated strength, see preceding page. Notice that to have blocks of a strength proportioned to the strength of the rope, still heavier blocks must be used. These will be found in our Bullock brand blocks on next page.

Fig. 201
Single

Fig. 202
Double

Fig. 203 Triple

As Manila hemp rope swells with dampness and use, it is well to order one size larger block than the rope sizes listed. Order a 12-inch block for 1 1/4 inch rope, as 1 1/2 inch rope is the largest rope a 12-inch block will take, and 1 1/4 inch rope handles much better through this block.

Beckets, see explanation and ruling same as for Nos. 101 to 103.

Bushings. When ordering be sure to state the "bushing" wanted—whether Plain Bored, also known as Common Iron Bushed, or Self-Lubricating graphite plug bronze bushed. The Self-Lubricating bushing requires no oiling.

Order by length of shell—Figure No. and style of sheaves.

"Bullock" Extra Heavy Manila Rope Blocks To Secure Full Strength of Manila Rope These are the Blocks to Use

Fig. 301 Single

Fig. 302 Double

Fig. 303 Triple

Furnished with extra heavy **FLATTENED HOOKS** or shackles.
All Bullock blocks are **Self-Lubricating Graphite Plug Bronze Brushed**.
Extra Heavy Hard Wood Shells, Straps and Pins.

Bullock tackle blocks are the heaviest and strongest blocks made for Manila rope. They are built to stand the hard wear and tear occasioned by severe usage and heavy loads, such as in **bridge erection, railroad wrecking and heavy construction work**, or where it is expected to secure the full strength of good Manila rope.

Bullock blocks are made from highest grade materials throughout. Shells are extra heavy and **double cross bolted**. Sheaves are heavy, with smoothly turned grooves and turned pins. Straps are heavy and hooks large and well proportioned. They are flattened, with eyes punched and worked out. No welds.

Bullock Hook Blocks (Large Flattened Hooks)

Fig. 451 Single

Fig. 452 Double

Fig. 453 Triple

Bullock blocks with lashing shackles are recommended for heaviest work. A shackle is just 5 times as strong as a hook made of same size iron. These are also known as "Oil Well" blocks. The straps are also of an entirely different construction, see illustrations. Straps are all straight and bear on the large shackle pin. All large blocks should be constructed in this manner.

Quadruple (4 sheave) blocks are built to special order only. Fig. No. is 454.

Bullock Snatch Blocks to match—see following page.

Bullock Shackle Blocks

Special blocks of any size, capacity or number sheaves built promptly to order.

H.Channon Company Chicago

"Chicago" Steel Hook Blocks for Manila Rope

Improved Heavy Pattern, Steel Shells, Round Loose Hooks

These blocks are steadily growing in popularity. There is no wood to split or rot and the shells are flared out and rounded nicely for the rope.

These blocks compare in strength with the wide mortise wood shell blocks Figs. 201 to 203 on preceding page and should not be confused with very light pattern steel blocks offered by the general hardware trade.

Chicago blocks have heavy steel shells and straps and strong hooks and pins.

Finished in black japan.

Bushings—The "plain bored" sheaves, also known as "common iron bushed" are really not "bushed" at all, but consist of plain bored cast iron sheaves rotating on turned steel pins. Our self-lubricating bronze bushed sheaves require no oil or attention and save loss of power by friction.

Beckets same ruling as for Figs. 101 to 103.

Price Bronze Bushed	\$7.00	\$9.50	\$13.00

No. 616 Railroad Ballast Snatch Blocks

A special block for ballast cables which are used to pull unloader plows.

Has chilled groove sheave, self-lubricating graphite bronze bushed. Center pin is fastened with hex nut and cotter key. The 16-inch shell has 9-inch sheave and 1 $\frac{1}{2}$ -inch pin. The 20-inch has 12-inch sheave and 1 $\frac{3}{4}$ -inch pin.

16-in. shell, for 1 $\frac{1}{2}$ -in. cable, 85 pounds	\$19.00
20-in. shell, for 2-in. cable, 150 pounds	40.00

Wire Rope Blocks—Regular Pattern

Swivel Hooks—Diamond Shells

As in our Manila rope blocks, we have three weights of blocks for wire rope—regular, heavy and extra heavy.

Our regular pattern blocks are the lightest and we recommend them for ordinary light work only. They compare in a way with other "commercial" blocks on the market listed for the same size of rope, but we furnish flattened type hooks of proper shape, which are considerably stronger than ordinary round hooks. Becketts furnished where desired.

Sheaves are substantial with heavy scores, have smoothly turned grooves and are bored true in a lathe. Turned pins.

Sold by outside diameter of sheave, instead of diameter of shell as in Manila rope blocks.

Sheaves should be large as possible to get the proper service out of the rope. Fig. 725 Single Fig. 730 Double

Wire Rope Blocks—Heavy Pattern

With Swivel Hooks or Cross Shackles

Fig. 740 Single With Hook Fig. 745 Double With Hook Fig. 750 Triple With Cross Shackle

These blocks are stronger than the regular pattern and are supplied with either shackles, or heavy flattened swivel hooks, at the same price.

We recommend the shackles where they can be used, as a shackle is considered to be five times stronger than a hook made from the same size iron.

Sheaves are heavy and well proportioned, with thick scores, turned grooves and lathe bored pin holes.

Recommended with self-lubricating graphite bronze bushed sheaves which require no oil and save loss of power by friction.

Can also be supplied without hooks, at a reduction in price.

Special Extra Heavy Wire Rope Blocks

With Large Outside Straps and Lashing Shackles

Fig. 760 Double

Fig. 765 Triple

Fig. 770 Quadruple

Where it is expected to secure the full strength of many parts of high strength wire rope these are the blocks to use.

We have sold them for years for the heaviest work in bridge and structural steel erection; for railroad wrecking and derrick car work.

The blocks are well designed and properly proportioned throughout. The shackles, pins, side plates, sheaves, etc., are all in proper relation to each other.

In a test by a large railroad company at the University of Madison, one of our 16-inch triple stock blocks failed at 258,000 pounds. Our rating for this block was 25 tons, a factor of safety of five.

Built to order for any capacity and with any number of sheaves. Prices upon request.

Producers' Snatch Blocks

Fig. 786 for Wire Line

Heavy pattern oil well blocks, all steel with center pin drilled for oiling and phosphor bronze bushed sheaves. Built single, double and triple 20 to 32-inch sheaves for 1-inch to 1 $\frac{1}{4}$ -inch cable.

Prices upon request.

Channon New Style Cargo Hoisters

For Manila Rope—Galv. Mall. Iron Shells—Also, Known as "Caisson" Blocks

A very neat, high grade, single block with galvanized, malleable iron shell, swivel hook and sheave with hard wood projecting cheeks. All sheaves are self-lubricating graphite bronze bushed.

Shells have hardwood inserted side plates and taken altogether these blocks are as smooth running and frictionless as it is possible to make.

Showing Special Sheave with Hardwood Projecting Cheeks and Self-Lubricating Bushing.

We can supply special sheaves of any size promptly. We must have diameter, width of score and hub, bore, diameter and kind of rope, as well as approximate load and purpose used.

Channon Self-Lubricating Graphited Bronze Bushings

Plain and Flanged—For Hard Service and High Speeds

Require no oil or attention. At least 5 per cent less friction for each sheave. Can be used on all kinds of bearings.

Tests of "common bushed" sheaves have shown a loss of power through friction to be as high as 12 per cent of the weight carried by each sheave. The same tests showed but 5 per cent loss when our self-lubricating bushings were used. Our bushings require no oil or attention and are suitable for heavy loads and high speeds.

The so-called "common iron" or "plain bushed sheave", in reality has no bushing at all. It has a plain bored hole and revolves on a steel pin or shaft. Copious oiling and constant attention are required, and wear in the hub soon necessitates a new sheave.

Wire Rope Sheave
Showing Bushing in
place.

The Bushing

The Channon Self-lubricating Bushing is a casting made of a special hard phosphor-bronze composition with small holes spaced and drilled through it. These holes are then filled with a graphite or plumbago lubricant and baked under intense heat. Each bushing is baked about four times, or until perfect, as the heat causes the lubricant in the holes to shrink, necessitating refilling and baking until both metal and lubricant are flush and smooth. The graphite forms a film which lubricates the pin.—Pressure can't squeeze this film out and the graphite plugs wear only as fast as the phosphor-bronze. When we furnish bushings in the sheaves the bushings are pressed in under enormous pressure, as it is important that the bushing does not move.

When a bushing is worn out another can be obtained at small cost, and it is not necessary to buy a complete new sheave. Long experience has demonstrated that this is the only perfect bushing for hard service and heavy loads. Ball and roller bearings crush, where they do not rust out.

Below we list a few common sizes—Any size furnished on short notice

Inside Diam.	Outside Diam.	Lengths—with price (each) of Plain Bushings, i. e. not flanged																			Add for Flange Bushing

Miscellaneous Sheaves and Pulleys

Heavy Spoked Mine Hoisting Sheaves
Pennsylvania Type

Used for mine head shafts with $\frac{3}{4}$ to $1\frac{1}{2}$ diameter wire rope. They are heavy and well proportioned. Also suitable for large dredges.

Price includes shaft and journal boxes.

No.	Diameter at Bottom of Groove, Ins.	Diameter of Shaft, Inches	Price with Plain Iron Groove	Price with Rope Lined Groove

306	72	2 $\frac{1}{2}$	126.00	150.00

Rubber Lined Wire Rope Transmission Sheaves

These sheaves are well balanced and should be carefully fitted true on the shaft and the shaft set at right angles to the line of transmission. Otherwise rope will wear excessively.

Price includes boring and keyseating.

Description of Chain Hoists

The lifting of loads is a universal need—a vital factor in every man's business. In foundries, machine shops, factories, sawmills, mines, quarries, warehouses, in power houses and boiler rooms—on railways, farms, ships and docks, heavy loads have to be lifted daily.

In the lifting of loads, safety and efficiency are of the highest importance. The most universal lifting device of modern times is the appliance known as the Chain Block or hoist.

The first essential in a chain block is **safety**—every part must be able to meet extra strains and shocks, because the very nature of its service exposes it to the hardest kind of usage and often at the hands of unskilled labor.

To be **efficient**, the chain block must be so designed and built as to lift the **maximum load with the least pull on the hand chain** and this efficiency must be permanent and lasting, the parts must be so designed as not to be subjected to rapid and unequal wear. Initial efficiency in a chain block is fairly easy to obtain, but to maintain the efficiency through years of hard service is quite another matter.

Our line of chain blocks embraces three types, each best for certain purposes; as follows:

Spur-Gear

Spur-Gear Hoists (The "Triplex")

In the spur-gear hoist, power is transmitted from the hand-chain to the load-chain by a train of balanced spur-gears, thus giving the highest mechanical efficiency with the lowest frictional resistance and loss.

The functions of hoisting and of lowering are separated, the latter being effected by an automatic brake mechanism, simple, sensitive and absolutely safe. For further description see "Triplex" hoists, on following pages.

Screw-Gear

Screw Geared Hoists

In the screw-gear hoist, power is transmitted from the hand chain to the load chain through a worm wheel and screw, which, although necessarily involving higher frictional resistance and therefore lower efficiency than spur-gearing, has the advantage of lower first cost and of very smooth action in hoisting and lowering. This block, while inferior as a labor and money saver to the "Triplex," is preferred for some uses and has a well defined field. For further description see following pages.

The "Differential" Hoist

In the differential hoist the power is applied by pulling directly on the slack part of the load chain and is multiplied by the simple device of the "differential sheave." As compared to the spur or the screw geared, it is a crude machine, wasteful of time and power, but by reason of its cheapness and simplicity, it is, nevertheless, a useful hoist where economy of time and labor is unimportant and low first cost the chief requirement; also described further in the following pages.

Differential

Mechanical Efficiency

is the percentage of applied power returned in useful work—the relative efficiency of the foregoing three types is indicated by the following table which also shows approximately their relative durability or life and their relative first costs (on the basis of the two ton size).

	Differential	Screw-Gear	Spur-Gear
Relative efficiency.....	35	50	100
Relative durability.....	20	80	100
Relative cost.....	40	80	100
Relative economic value.....	20	60	100

The selection of the hoist, therefore, turns on the question of whether the controlling factor is low first cost or low operating cost. Where the use is frequent the "Triplex" is the best—in fact the first cost will usually be repaid within one year or less, by the great saving in time and labor.

Description of Chain Hoists—Continued

The most important part of a chain block is the chain. Not only must the load chain be strong enough to hold a load far in excess of the rated capacity of the block and to resist sudden shocks or strains, but it must meet these requirements without changing the shape of a single link. The moment a link stretches, trouble begins—it no longer fits the pockets in the load sheave and instead of slipping easily through, it begins to grind and cut—wearing away both itself and the sheave until the block is ruined.

The chain links of the triplex and duplex blocks will not stretch under double the load required to stretch the next best chain now used by any other chain block maker. This chain is steel and electrically welded by special process, making it the strongest and at the same time the most accurate obtainable.

In a recent test of a $\frac{1}{2}$ -inch chain, it held a load $5\frac{1}{4}$ times its rated capacity before breaking; the safe test for this chain is three times its rated capacity without injury to it.

The following figures were obtained by tests on triplex block chains at Lloyds' Proving House (England).

Rated capacity, pounds.....	1000	2000	3000	4000
Elastic Limit, pounds.....	4409	7173	11023	13787
Ultimate strength, pounds.....	6146	13339	17972	22242

The hooks used on the Triplex and Duplex Chain Hoists are forged from special selected steel stock subjected to both physical and chemical tests before being placed in the hoists.

The principal characteristic of the steel is high tensile strength combined with great ductility. The quality of this steel is such that if the block is dangerously overloaded, the hooks will give warning by bending without breaking.

Chain Block Hoisting Speeds, Hand Chain Pull, etc.

Capacity in Tons	Pull in Pounds Required on Hand Chain to Lift Full Loads			Feet of Hand Chain to be Pulled by Operator to Lift Load One Foot High			Hoisting Speeds, Feet per Minute Attainable and Number of Men Required for Hoisting Full Loads without Pulling Over 80 Pounds										Load One Man Can Handle without Pulling Over 80 Pounds

12	135*	168*8	1.6	2.4	4	17000		
16	140*	210*6	1.2	1.8	4	20000		

*On each of the two hand chains.

†The number of men is based on each man pulling not over 80 pounds. One man pulling 160 pounds or less, as given in the first two columns can lift the full capacity of any Triplex or Duplex Block.

The speed of a chain hoist is governed by the pull required on the hand chain and the distance the hand chain must travel to lift the load the required distance.

The above speeds are given for short lifts with men accustomed to the work; for continuous easy lifting two-thirds of these speeds are attainable. The Triplex Block lifts rapidly and the speed increases for light loads because the length of hand chain to be overhauled is small. This fact also enables the operator to lower the load very quickly with the Triplex Block. The 12 and 20-ton Triplex have two hand wheels permitting two men to hoist simultaneously, thereby securing double speed.

Do you use Waste? We handle the best.

The Channon Differential Chain Hoist

Capacity $\frac{1}{4}$ to 3 Tons—Holds the Load at Any Point

The Differential chain hoist contains the fewest number of parts and costs the least of any chain block made.

It handles loads readily and on account of its simplicity and reliability is especially adapted for ordinary hoisting purposes where higher power and durability of the spur and screw geared blocks are not required.

With a Differential block, three men pulling 216 pounds can lift a ton, or one man can do the work which would require several men with rope-tackle, jacks, skids, crow-bars and rollers. Heat and cold do not affect it and it will stand all kinds of weather; one Differential chain hoist will outlast several rope hoists.

Our hoists are well designed and proportioned—the chains are accurate in size, finely finished and hardened to prevent wear. The sheaves are large and chain pockets are carefully formed to mesh accurately with the chain, assuring smooth working and also lessening the tendency of the chain to stretch when overloaded.

No.	Capacity, Tons	Will Lift, Feet	Price Each	Price Extra Lift, per Foot	Regular Chain	Extra Chain, per Foot	Weight, with Chain	Shortest Distance Between Hooks, Inches

Star Self Locking Manila Rope Hoist Roller Bearing

A handy light weight hoist which rolls up compactly.

Yokes are drop forged and hooks are attached to yoke by a special double pressed and riveted steel swivel.

The locking device is of malleable iron and is attached to the axle. Pin lock acts on the hoist rope. A slight outward pull away from the block instantly locks the block and holds the load. Lock is released by a slight pull on the hoist rope toward the block.

Hoist

New Model Worm Gear Hoist

This hoist differs from regular worm geared hoists, principally in that it has only one load chain.

The frame is a crucible steel casting designed to withstand a strain of over 2 $\frac{1}{2}$ tons without breaking and 2 tons without bending.

The gears are cut from bar stock 25-pt. carbon, heat treated and case hardened. The gears are cut Hindly style as this type of worm gear will give a larger factor of safety, will wear longer and pull easier than the straight worm.

Lodd chain is electric welded, tested to two ton, fitted with steel hooks.

Made in 1-ton size only. Weight 45 pounds. Price.....\$30.00

Chain Hoist

H. Channon Company Chicago

Screw Geared Chain Hoists

The "Duplex" Screw Geared Chain Hoist

$\frac{1}{2}$ to 10 Tons Capacity

In efficiency, this hoist comes next to the Triplex spur-gear, but it is slower in speed. With the Duplex Hoist, one man pulling only 87 pounds, can lift a one-ton load.

This hoist requires little head room and it is especially adapted for portable use, as it is light, powerful and durable.

The load is carried by two distinct chains and to guard against accident, each of these chains has ample strength to carry any load up to the rated capacity of the hoist.

The safety guides prevent the load chain from slipping and the swivel connections prevent fouling of the chain.

The bronze worm wheels and steel worms have hardened and ground thrust bearings and run in oil, insuring smooth action and thorough lubrication.

*Height will hoist from level on which operator stands.

†The "reach" is the sum of the "hoist" and the "minimum distance between hooks," when hung at this height, the hand chain hangs down to within 18 inches of the floor.

‡Denotes pull in pounds to lift the full load and the number of feet of hand chain which must be handled to lift the load one foot.

The "Harrington" Screw Geared Chain Hoist

$\frac{1}{4}$ to 10 Tons Capacity

The steel worm or screw and the bronze worm gear are enclosed in an oil-tight case or housing—the working parts are thus always working in oil, insuring thorough lubrication. A hard grease should be used, as it lasts longer than oil.

The load is carried on two chains, and the hand chain guide is so placed that the operator can stand clear of the load.

The load wheels have square holes fitted to a square hub on the worm gear instead of clutches, increasing the strength and avoiding liability of breakage. They are also reversible—when one side of the pockets become worn, the wheels can be taken off and turned around, bringing the good sides of the pocket into action.

The load chain hook has swivel connections, so that any twist of the chain may be straightened without removal.

A thrust screw and bronze washer are placed at the end of the worm, instantly adjustable, to obtain fast or slow speed in lowering, as is desirable in some cases.

Description

The "Triplex" Spur-Gearred Chain Hoist

Steel Gears—Steel Sheaves—Steel Pin—Steel Hooks—in fact a line of steel from hook to hook

All Steel Construction.

This is the hoist we offer for the greatest strength, the greatest safety, the greatest efficiency and the best economy—with it one man can lift heavier loads at greater speed and with less effort than any other.

The Triplex Block saves and utilizes the power, which in blocks of other kinds is wasted in overcoming the friction relied upon to sustain the load. Previous to this invention no block existed in which the sustaining mechanism was separated from the hoisting mechanism so that the friction of the former did not augment the resistance to be overcome in hoisting.

In the Triplex the load is sustained by a device entirely independent of the hoisting mechanism—thus 80% of the power exerted by a man pulling on the hand chain of a Triplex block is transformed into lifting energy and this lifting energy is so multiplied that **one man pulling only 82 pounds can lift one ton.**

While efficiency is a prime factor in a chain hoist, safety is a greater one. An accident due to defective design or construction may cost a life—considerable delay or loss of material—you cannot, therefore, afford to take the smallest chance on the reliability of a chain hoist to carry its rated load—every Triplex hoist is tested to 50% overload beyond its rated capacity—every link in the chain is minutely inspected both before and during the chain test.

The hoisting mechanism consists of a balanced train of spur gears, from the small central pinion to the shrouded internal gear, of heavy pitch, constituting a part of the frame and of the full diameter of the block. The two intermediate gears are carried by a circular frame or "pinion cage," keyed to the load-chain sheave, and revolving with the internal gear, thus forming a planetary motion which gives the desired leverage.

In this system the gear pressures are so balanced that all wear is equally distributed to every tooth in every gear and equally upon all bearings. The wear is thus reduced to a minimum and also distributed so that it is actually eliminated at any one point.

The sustaining mechanism consists of a set of friction discs, one of which has external ratchet teeth engaging with a drop-foreg pawl. The hand wheel is screwed upon the central hub, and in hoisting clamps the discs tightly together. In lowering, the reverse motion of the hand wheel releases the engagement of the discs, and allows the load to lower smoothly and rapidly, but only so long as the hand wheel is revolved backwards; when this motion ceases the discs automatically tighten and the load is securely held.

Every Hoist Tested to 50% Overload Beyond Its Rated Capacity

Referring to the illustration at the left—when the hand chain of the Triplex hoist is pulled, the central pinion is rotated, transmitting its energy through two intermediate gears, meshing with it, at two points always diametrically opposite each other. The two intermediate gears engage with a large internal gear which acts as a fulcrum to compel the revolution of the pinion cage which latter is keyed to the load sheave and lifts the load.

All tendency to thrust and to wear the bearings apart, is neutralized by the counteracting pressure due to the meshing of the intermediate gears with the large internal gear which encloses and is the final complement of the planetary movement.

The thrust of the tooth pressures under load is absolutely neutralized by counteracting tooth pressures—this means practically no wear on the bearings.

*Figures denote height in feet which blocks with regular lengths of chain will hoist above level on which operator stands.

†For each hand chain.

The chains and working parts of all Triplex Blocks from 4 to 20 tons capacity are interchangeable with the 2 ton size. The added power and strength is obtained by multiplying sheaves with heavy yokes and hooks.

High-Speed Triplex Hoists

$\frac{1}{4}$ -Ton.....\$35.00 $\frac{1}{2}$ -Ton.....\$45.00

The High-Speed Triplex is made with special gearing in the above two sizes only and are suitable for rapid work in frequent lifting of loads weighing less than five hundred pounds. They handle light loads at double speed, but require double the chain pull. For easy lifting, the regular Triplex Blocks are faster than any others, considering the force which a man can exert continuously on the hand chain.

Repair Parts for "Triplex" Chain Hoists

In ordering parts state whether for "1898 Model" or "Model S. S." Parts 303 to 332 differ.

In ordering Load Chains specify whether or not hook is required.
Parts 218 and 127 should be specified "Quick Speed" for blocks so marked on the gear cover.

"Y and T" Electric Hoists

Direct or Alt. Current, 110 to 650 Volts

These are high grade Machines designed to give uninterrupted service and operate at minimum cost. The hoist consists of two winding drums, hung in steel suspension plates and driven by specially designed motors.

Specification Data

Motors: Direct Current.—For 110-220-500 volts. The motors are specially designed to meet the requirements of hoisting work. The windings are heavily insulated for protection against moisture.

Alternating Current.—For 220 volts, two or three phase sixty cycles and 440 volts three phase sixty cycles. Single phase hoists are not supplied. These are enclosed induction motors of special design to develop high starting torque with low current inrush. Windings are heavily insulated for protection against moisture.

Controllers.—Cylinder drum type. Fingers and contacts liberally constructed for hoisting work. Contacts adjustable and can be easily renewed.

Rheostat.—Resistance units are of the flat type and are easily accessible. Windings are covered with an insulating cement which prevents oxidation from moisture or acid fumes.

Suspension.—Suspension members are steel, so that the load is supported from "Hook-to-hook-a-line-of-steel."

Automatic Emergency Stop.—"KY" type hoists have adjustable emergency stop which automatically shuts off the controller when the top and bottom limits of hook travel are reached.

Brake.—Load is sustained at all times by the interlocking gearing in the "KY" type machine.

Gearing.—Main gearing runs at all times in a bath of oil.

Lubrication.—All important bearings are equipped with grease cups or oil ring bearings so that the minimum of care and attention is required. The main gears run submerged in a bath of oil.

Over-Load Test.—Before shipment, each hoist is given a long running test and required to lift a 50 percent overload.

**The Electric Triplex Hoist**

Takes the place of a hand chain hoist at a moderate additional cost and gives from 5 to 10 times greater speed. Where loads up to 1 ton are repeatedly lifted and lowered as in serving machine tools, etc., this is the most economical hoist to use. It is well adapted for use on overhead trolley systems, for attachment to small traveling cranes, etc.

The installation involves simply hooking the hoist onto a firm support and attaching two wires for current—it is then ready to do the work of five men.

Consists of a regular Triplex chain hoist with electric motor attached and driven by chain as shown. The 1 ton Electric Triplex uses the 2 ton chain hoist—the 1/2 ton Electric, the 1 ton chain hoist. Should the power fail, may be operated by the hand chain.

Sprague Electric Hoists

Capacity 1-4 to 6 Tons

S-1 Hoist with Style A Plain Trolley Carriage

Standard hoists are spur-gearred, but worm-gearred can be furnished where high speeds are not desired.

Spur-gearred hoists are equipped with automatic brakes which hold loads absolutely at any point, whether or not the hoist is supplied with current.

Hoists can be equipped with either single speed controller for quick handling of loads or with rheostatic or foundry type controller where extreme accuracy is required in handling the load.

All hoists are fitted with automatic limit switch, which absolutely prevents damage to hoist through running the hook too high.

All hoists may be equipped with a lowering limit switch.

Illustration shows hoist with Style A plain carriage for running on lower flange of single I-beam. Hoist can also be furnished with carriage for running on upper flange of single I-beam or with carriage for running on top of double beams for bridge cranes.

Carriages can be furnished plain, hand geared or motor driven, also with cage for operator.

All hoists have enclosed motors designed especially for the purpose; all working parts are entirely enclosed and hoists may be used in dusty places or outdoors.

Cylinder Air Hoists

Improved Adjustable Valve, combining in one body the inlet and exhaust functions, the speed adjustment, cut-off and the safety check. Few parts; adjustable to wear; no stuffing-box.

Adjustable Speed Attachment regulates speed delicately from very slow to very fast, independently of the operating lever.

Automatic Cut-Off closes air supply at any required height, in connection with adjustable slip collar on piston rod; but at the same time allows operator to lift and lower and still have both hands free to handle his work. Saves air.

Safety Stop Device stops load from running down if air supply is broken.

Patent Exhaust Attachment. Only clean exhaust air can be drawn into top of cylinder when piston is lowering. Shuts out dirt and grit. Saves piston packing. We have exclusive use of this device.

Automatic Lubrication both of valve and piston rod. Oil placed in top of hoist lubricates the piston and surplus oil is drained down to piston rod stuffing-box.

Accessible Design. Valve can be removed without removing heads and without unscrewing the inlet or exhaust pipes. No "screwed on" heads used; all heads removable by simply taking off a few nuts. Through rods from top to bottom strengthen the machine.

Cushioned Stop at top and bottom of cylinder prevents sudden stops and jars.

Universal Hook. Ball and socket type easily removable.

Polished Cylinder inside, insuring high efficiency; die pressed piston packing; brass piston rod gland.

Self-Closing Valves are supplied when specially ordered, but are not suited to some duties.

All hoists over 8-foot stroke take special prices.

Motor Air Hoists

Equipped with motors or air engines of the double oscillating cylinder type with bronze seats and bearings. These motors are very compact and thoroughly protected from dirt. Castings are semi-steel.

Motor may be instantly started, stopped or reversed by two pendant chains, reaching to within five feet of the floor—the control valve is self-closing when chains are released—holds the load with the air hoist attached.

Hoists are designed to be operated by common labor and constructed to handle loads up to 10 tons capacity to a height of 25 feet or more with minimum air consumption.

All ratings based on 80-pound air pressure at the motor.

Capacity in Tons	Std. Height of Lift, Feet	Lifting Speed, Feet per Minute	Shortest Distance Between Hooks, In.	Approx. Weight, Pounds	Price Each Std. Lift
1	15	30	31	240	\$180.00

8	15	8	47	675	450.00
10	15	6	57	1050	500.00

We have a hoist for every purpose.

I Beam Trolley Systems

The overhead or tramrail system of handling and transporting heavy materials possesses marked advantages in convenience, speed and efficiency over other methods of handling heavy loads.

Great saving can be made with this system in both small and large installations.

One man can handle loads many times as heavy as by the other methods in about one-fifth the time required by the next best way—he can handle the load wherever the trolley runs, from one end of the plant to the other with switches and turn-outs wherever necessary.

Installation of I beam track is a simple matter and we can supply promptly straight or curved track all drilled and ready to attach with hangers, switches, etc.

I Beam Trolley Track

The safest and most substantial form of overhead track or tramrail consists of standard steel I beams.

By use of trolleys running on the lower flange of the beam, the head-room is reduced to a minimum. The strength and stiffness of this track are so great that few supports are required, making it the cheapest and easiest to erect.

Prices I Beam Trolley Track, Curves and Joints

Splices, Fig. 11

Capacity in tons..... tons	1/4	1/2	1	1 1/2	2	3	4	5	6	8	10
Size of I beam..... inches	4	5	6	7	8	9	10	12	15	20	24
Distance betw. supports..... ft.	13	14	14	15	16	16	16	18	22	25	30
Price of straight track, per ft.	\$0.60	\$0.80	\$1.00	\$1.10	\$1.20	\$1.40	\$1.70	\$2.00	\$2.40	\$3.50	\$4.50
*Curves, price for bending only, each.....	4.50	5.00	5.50	6.00	7.00	8.00	10.00	12.00	18.00	28.00	36.00
Splices or joints, Fig. 11, complete, each.....	2.50	2.50	3.00	3.50	4.00	4.50	5.00	6.00	7.00	9.00	10.00

*The price of each curve is charged for each 90° of curvature or fraction thereof and is additional to the price of the I beam used. For shipment of trolley track in less than carload lots, splices should be so spaced as to make the lengths 20 feet or less for box cars and 30-foot lengths for flat cars.

Fig. 11. Splices have heavy plates at top of track and keyed hanger for which hole is drilled through top center of the I beam. The bolt is slotted and track held by flat cross-key with lock nut on top of spliced plate, making a very rigid joint.

Hangers for I Beam Trolley Track

Fig. 13. Hanger Bolt

Fig. 14. "V" Hanger

Fig. 14A. "V" Hanger

Fig. 15. Clip

The track may be suspended by bolting directly to the overhead timbers or by means of the hanger bolts shown above—leaving the beam clear for the trolley wheels to pass.

For drop hangers the "V" construction is generally used and for steel construction the Fig. 15 Hanger Clips. Fig. 14-A hanger is popular—no drilling of track necessary.

"Brownhoist" Patent Equalizing Trolleys

To Run on Lower Flanges of I Beam

Plain Trolley

Geared Trolley

In these trolleys the plane of the wheels is perpendicular to the flanges of the I beam on which they tread, so that the lines of force due to the load intersect at the point of suspension—in the eye of the clevis. The outside plates are connected by means of bolts and separators to inner steel bearing plates. Each wheel has an inner as well as an outer bearing. The two halves of the trolley are connected by a suspension pin so that trolley may be easily adjusted for wider beams by lengthening this pin. The pin being a loose fit, allows the two sides of the trolley to equalize so that each wheel always takes its full share of the suspended load notwithstanding irregularities in the track. The construction also permits of placing trolley on I beams having both ends already imbedded in the walls.

Each of the four wheels is pressed on to its axle which is supported at each end in eight self-aligning bronze, dust-proof, oil reservoir bearings having oil pockets to hold oily waste. The trolley need not be oiled more than once in six months.

The tread of the wheels is parallel to the axis of the trolley and the wheels are at right angles to the bearing surface of the I beam track—there is no grinding on the tread. The flange of the trolley wheel is correctly shaped and meets the flange of the I beam easily—so that it turns truly on the beam and rolls smoothly around curves.

Geared Trolleys. These differ from the plain trolleys in that they are moved along the track by pulling on a pendant hand chain instead of pushing on the load.

The hand chain wheel is attached to a shaft, on one end of which is a pinion that engages with gears of the same diameter as the trolley wheels.

Geared trolleys should be specified in most cases for loads three tons and over as the gearing enables the operator to handle the load with ease. Geared trolleys are also used where the load is to be moved accurately within a few inches.

Hand chains furnished with geared trolleys is same length as chain supplied with standard Triplex chain hoist of corresponding size.

Trolleys with current collectors, also motor driven trolleys for use with electric hoists quoted upon request.

Trolleys 3-ton and larger have roller bearings.

Hyatt Flexible Roller Bearing I Beam Trolleys

Cast Steel, Equalizing Adjustable Frames. Easy Running

Fig. 101 Plain

Sectional View

Fig. 102 Geared

The easy running feature of this trolley is accounted for by the Hyatt Roller Bearings. Note pull required in table below.

The side frames are cast steel, well ribbed and have adjustable spreading feature, for use on any sized beam. They are positively locked and hold the load centrally between the frames, but permit one frame to rock on the shaft and equally distribute the load to all wheels under all track way conditions.

Hyatt Flexible Roller Bearing

Cross-shaft is threaded right and left-hand with locking pin.

Wheels are large diameter, of turned hard cast iron, with anti-friction, anti-climbing flanges. Wheels are at right angles to track and have crowned faces.

Geared trolleys are used for heavy loads, and where it is desired to spot the load accurately, they are driven by two pinions on opposite wheels. Pinion shelf brackets and chain guards are of steel. Hand chain for 12 feet above floor.

Pull—Force in pounds required to propel one ton on a dry straight track.

Traction—Force required to propel, given as a percentage of the load carried by the trolley. Large trolleys require less force to move them in proportion to their loads.

Fig. 113 Plain

Steel Yoke Trolleys

A straight-sided, forged-steel frame trolley. Steel roller bushed wheels. Treads are tapered and trolley is not self-equalizing.

Channon Overhung Portable Shop Crane

An invaluable addition to the shop for serving machine tools, assembling and handling the heavier pieces. No. 1 is the auto repair shop size.

The load is hoisted, lowered and transported all by the same machine. **Roller bearings.** The body of the crane base, wheels and projecting arms are of cast iron—the front axle of cast steel. A wide, heavy band of wrought iron reinforces the projecting arms, bolted through the hook plates and extends through the base.

Furnished with two styles of bed plates—regulator flat bed plate is 12 inches in height and the "low-down" bed plate 6½ inches high—permitting the crane to run under the machines. No. 5 made "low-down" only.

The "Pull-U-Out" Portable Crane

This unique and handy crane consists of the famous "Pull-U-Out" attached to a floor crane constructed of 2½-inch extra heavy steel tubing, slip jointed, that can be put together in five minutes with a monkey wrench. Cannot be tipped over. The "Pull-U-Out" can be instantly detached and used for various hoisting or pulling jobs around the plant.

Base 3 feet 3 inches wide, 6 feet deep. Lift 9 feet 6 inches. Total height 10 feet. Weight 250 pounds.

Erecting instructions furnished with crane.
Shipped ready to put together.

Price, complete, with "Pull-U-Out".....\$50.00

Duplex Portable Crane

Guaranteed lifting capacity of 4000 pounds. No chains to slip. Load held at any point without brakes or dogs.

Swing arms out of way if you wish to use boom only. Has two speeds easily operated by one man. Load is raised by smooth running screw, enabling operator to raise or lower load to a decimal part of an inch.

Every garage needs them for removing engines, transmissions, bodies, and for jacking up cars, etc. All machine shops need them. The fine thread lifting screw enables the operator to stop machinery with ease and exactness.

Shipping rooms and freight houses use them for transferring loads to platforms, cars, trucks, etc.

Weight, 3000 pounds.

Price \$85.00

Hand Power Pillar Cranes

These cranes are extensively used by railroads and on docks for locations where a top support is not available. We make them in a variety of designs, with and without auxiliary or whip hoists. The pillar is made of either cast iron or steel, as conditions require.

They may be made for operation by hand power or by electric power, or, in some cases, by direct acting air hoists. The straight boom is standard.

Hand Power List

Standard capacities, 2, 3, 5, 7½, 10 and 15 tons.

Standard radius, 15 feet.

Special radii to order, 10, 12, 15, 20 feet.

The cut shows double block design with auxiliary power whip hoist. The standard type has only one block.

Prices on application

All Steel Bracket Jib Cranes

Prices include Plain Trolley but no Hoist.

With chain hoist attached to trolley—load can be raised or lowered, moved in and out or swung from side to side—a simple, inexpensive crane for attachment to columns or walls, supplementing traveling cranes, etc.

All parts of these cranes are of steel, pintle bearings are babbitted and lubricated by compression grease cups. Full length mast is of turned shafting and diagonal rods are threaded both ends allowing for adjustment. Factor of safety figured is 5 to 1 for cranes listed. Walls or posts must have sufficient strength to resist the severe horizontal forces acting upon the pintles.

Type A

Single Braced Jib Cranes

Type A

Usually the single braced jib can be constructed at a lower cost than any other type. It represents the simplest form of jib crane and is adaptable in nearly all locations.

Triple Braced Jib Cranes

Type B

The triple braced frame is most suitable for locations requiring ample clearance under the jib and proportionately large radius of jib.

Type C

Type B

Top Braced Jib Cranes

Type C

The top braced jib is adapted to high ceilings and to yard use. It possesses the advantage of a perfectly clear space under the jib. This type cannot be advantageously used where ceiling is low unless the jib is comparatively short.

Give capacity, height of mast, length of jib, type of frame, most available power and class of work.

Hand Power Traveling Bridge Cranes

Single I Beam Type—Roller Bearing

Capacity up to 5 Tons—Spans up to 35 ft.

Illustration Shows Racking Device to Propel Both Bridge and Trolley—Also Furnished Without

This is the simplest form of traveling bridge crane—can be used with plain trolley and without racking device, in the light sizes, in which case the trolley is moved on the I beam and the crane propelled on its tracks—by simply pushing on the load suspended from a chain hoist hooked into the trolley. Or—the crane may have geared trolley and also racking device with pendant floor chains to propel both bridge and trolley—as shown in above cut.

Safety is secured by using parts amply strong, with margin of safety much in excess of rated load. All cranes are figured for a factor of safety of not less than five—after making all deductions for length, concentrated load, side pull, lack of lateral support, etc.—and, by using cast steel instead of cast iron, wherever heavy stresses are encountered. Cranes are also figured for deflection as well as stresses.

End Trucks.—Each crane end is a single piece casting bolted to the bridge beam in such a manner that the bolts bear no portion of the strain due to the crane load. Additional bracing is secured by heavy diagonals from end to bridge—see illustration above. The ends have long wheel-base, 60 to 66 inches, and the ends are forked to receive the wheels. This self-contained feature makes erection a simple matter and the cost of installation low. By this design of solid cast forked end trucks—minimum end clearance is secured—avoiding over-hung wheels, which are most unsatisfactory. Small end clearance decreases the cost of supporting brackets for runway rails, decreases the strain on posts or wall and increases the effective span of the crane. The wheels are large in diameter, 17 to 19 inches, insuring least bearing movement for given travel, have machined treads and are bushed with Hyatt flexible roller bearings, and revolve around hollow shafts that are held stationary by a bolt passing through fork and shaft, binding them firmly together—these bolts are positively locked and cannot work loose. Owing to the above features—only the minimum amount of energy is required to move them, as no expense has been spared to the end that frictional losses be eliminated.

Trolleys.—In this type of crane travel upon the lower flange of the single I beam—saving headroom. Trolleys may be plain or geared as desired—for the heavier loads the geared type operated by pendant hand chains are recommended—see preceding pages for styles and prices.

Hoists.—Chain hoist of all types will be found listed on preceding pages.

Capacity given is the net safe load that can be handled, as the weight of trolley as well as the hoist has been absorbed. These cranes will stand an occasional overload of 50 to 100 per cent without harm, but such practice is bad and can not be advised. "Reinf." beams in table above are reinforced with a channel on top.

Prices quoted upon request.

Hand Power Traveling Bridge Cranes

Double I Beam Types—Roller Bearing

Crane with trolley inside bridge—racking device and geared trolley.

Crane with trolley on top of bridge—racking device and geared trolley.

The double I beam cranes, above illustrated, whether formed of channels, I beams or I beams reinforced with channels—with trolley on top or between beams—all have the characteristics described in our single I beam type on preceding page—of large factor of safety, rigidity, large diameter wheels, Hyatt flexible roller bearings and single piece crane ends with long wheel bases.

Double beam cranes are made in spans up to 40 feet and in capacities up to 12 tons. The bridge or trolley can be propelled by hand chains reaching to the floor. The hand chain sheaves are attached direct to the wheels on trolleys 4 tons capacity or under and geared to wheels on trolleys larger than 4 tons capacity. When the bridge is propelled by hand chains a squaring shaft is used which is connected to the crane wheels by internal gearing.

Cranes, with the trolley inside the beams, save headroom and permit runway rails being placed very close to the ceiling. Their clearances are almost identical with our single I beam cranes, as the trolley runs entirely inside the bridge.

Wheels have extra long hubs, providing a larger bearing surface than usual—are large in diameter, insuring least bearing movement. Treads are machined and hubs bushed with steel liners and Hyatt flexible roller bearings which reduce friction losses to an extent that, for ease of movement, these cranes are unsurpassed.

The roller bearing consists of a set of spiral rollers mounted in a simple, effective cage, which constitutes the whole bearing. Under all conditions there is a line of contact the full length of the roller. The hollows of the rollers act as oil reservoirs. Their alternate right and left spirals carry the oil back and forth and take up any grit or dirt.

We can furnish these cranes with electrically operated bridge travel if desired. The electric motor is fully enclosed and drives the squaring shaft through compound gears, the first pair of which is machine cut from the solid to insure perfect mesh. The controller may be placed wherever desired and controlled from the floor by means of pendant hand ropes or chains, doing away with the necessity of having an operator's cage. A centering spring on controller brings the arm to full "off" position when operator releases the control rope. This makes an efficient power travel, capable of doing as much as larger and much more expensive outfits.

Hoists for use with these cranes will be found listed on preceding pages.

Trolley to go between bridge beams

Crane wheel with Flexible Roller Bearings

Trolley to run on top of bridge beams. Shows trolley for over 5000 lbs. capacity.

Capacity given is the net safe load that can be handled, as the weight of the trolley as well as the hoist has been absorbed. Weight given is the net shipping weight of simple crane and trolley without the hoist or pendant hand chains for propelling.

Referring to the line drawing above, the dimensions in the order given are: Weight of crane in pounds; "Beam" depth given in inches. Letters C, CR, P, or PR after beam signifies: C is plain channel and CR denotes reinforced channel; P indicates plain I beam and R means reinforced I beam; A is dimension over hand chain wheel of geared trolley; B is wheelbase and D is diameter of wheels. Certified blue prints with exact dimensions furnished upon request.

Quantity Differentials

All specifications for less than 1,000 pounds of a size will be subject to the following extras, the total weight of a size ordered to determine the extra, regardless of length and regardless of the exact quantity actually shipped:

500 to 999 pounds.....	\$0.05 per 100 pounds net
100 to 499 pounds.....	.10 per 100 pounds net
Less than 100 pounds.....	.20 per 100 pounds net

The above prices are for bars from 5 to 24 feet inclusive. Extras for short and long lengths.

Lengths—In.	Rounds	Squares	Flats	Hexagons
3 to 5 $\frac{1}{8}$	\$1.00	\$1.00	\$2.00	\$1.00
6 to 11 $\frac{1}{8}$.50	.50	1.00	.50
12 to 23 $\frac{1}{8}$.25	.50	.50	.25
24 to 50 $\frac{1}{8}$.10	.25	.25	.10

24 feet long and less than 30 feet, \$0.50 per 100 lb. net extra.
 30 feet long and less than 35 feet, \$1.00 per 100 lb. net extra.
 35 feet long and less than 40 feet, \$1.50 per 100 lb. net extra.
 40 feet long and less than 45 feet, \$2.00 per 100 lb. net extra.
 45 feet and longer, \$2.00 per 100 lb. net extra.

Burr Portable Key Seater

No. 1
 Will mill key seats in the middle or on the ends of shafting, from $\frac{1}{4}$ to 5 inches in diameter, without removing it from its hangers or boxes. It will mill a key seat 12 inches long without resetting.

A set of five milling cutters is furnished with each machine, by using one or more of which on the spindle, key seats of any of the following sizes may be cut with one operation: $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, 1 , $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2 , $2\frac{1}{4}$, $2\frac{1}{2}$, $2\frac{3}{4}$, 3 , $3\frac{1}{4}$, $3\frac{1}{2}$, $3\frac{3}{4}$, 4 , $4\frac{1}{4}$, $4\frac{1}{2}$, $4\frac{3}{4}$, 5 .

No. 1. Price each.....\$50.00
 Weight, net, 76 pounds.

No. 2 will mill key seats in the middle or on the ends of shafting from $\frac{1}{4}$ inches to 8 inches in diameter, without removing it from its hangers.

Five milling cutters are furnished with each machine. Will cut with one operation the same sizes as No. 1.

No. 2. Price each.....\$100.00
 Weight, net, 200 pounds.

For other key seating machines, see index.

Standard Key Seats

Where key seats are required in shafting, pulleys, wheels, etc., we will cut them according to the following standard list unless otherwise ordered:

Diameter of Shaft, Inches	Width of Key Seat "B," Inch	Diameter of Shaft, Inch	Width of Key Seat "B," inch
$\frac{5}{8}$ to $1\frac{1}{4}$	$\frac{1}{4}$	$3\frac{3}{4}$ to $4\frac{3}{4}$	1
$1\frac{1}{8}$ to $1\frac{3}{8}$	$\frac{3}{8}$	$4\frac{3}{4}$ to $4\frac{7}{8}$	$1\frac{1}{4}$
$1\frac{1}{4}$ to $1\frac{1}{2}$	$\frac{1}{2}$	$4\frac{7}{8}$ to $5\frac{1}{8}$	$1\frac{1}{4}$
$1\frac{1}{2}$ to $2\frac{1}{8}$	$\frac{3}{4}$	$5\frac{1}{8}$ to $5\frac{3}{8}$	$1\frac{1}{2}$
$2\frac{1}{8}$ to $2\frac{1}{4}$	$\frac{7}{8}$	$5\frac{3}{8}$ to $6\frac{1}{8}$	$1\frac{1}{2}$
$2\frac{1}{4}$ to $2\frac{3}{4}$	1	$6\frac{1}{8}$ to $6\frac{3}{4}$	$1\frac{3}{4}$
$2\frac{3}{4}$ to $3\frac{1}{8}$	$1\frac{1}{4}$	$6\frac{3}{4}$ to $7\frac{1}{8}$	$1\frac{3}{4}$

Price List for Key Seating Shafting

Price fitted includes key-seating shafts, fitting and facing couplings on same.

Solid Sleeve Couplings For Light Shafting

Have countersunk set screws, and are finished over entire surface.

Size, inches	1 1/2	2	3	4	5	6	8
Price each	\$2.00	\$2.50	\$3.00	\$3.50	\$4.00	\$4.00	\$5.00

Ribbed Compression Couplings

Complies with all legal requirements as to safety by having bolt heads and nuts protected. This coupling, when securely clamped to the shaft without key, develops marked driving efficiency. Reducing couplings charged at the rate of the larger size, plus 10%.

Price Each, Including Keys

Size shaft, inches	1 1/8	1 1/2	1 3/4	2	2 1/4	2 1/2	2 3/4
Price each	\$3.05	\$4.30	\$6.30	\$7.40	\$9.00	\$10.00	\$11.00
Size shaft, inches	2 1/2	3	3 1/2	4	4 1/2	5	6
Price each	\$13.00	\$16.50	\$20.00	\$24.00	\$28.00	\$42.00	

Keyless Compression Flange Coupling

No keys or key seating necessary to attach these couplings.

Sizes 2 1/2-inch and Smaller

1 1/2"	18	6.85	8.00
1 1/4"	18	9.65	11.80

Pillow Blocks

Rigid type and heavy pattern. Babbitted bearings reamed to size, ends faced. Sizes smaller than 2 1/4" have only two bolts.

Diameter of shaft, inches.	1 1/2"	1 1/4"	1 1/8"	1"
Price each	\$1.30	\$1.60	\$2.10	\$2.70
Diameter of shaft, inches.	2"	2 1/4"	3"	3 1/2"
Price each	\$4.60	\$5.50	\$7.00	\$8.00

Common Flat Boxes

While low in price, these boxes are well made.

They are babbitted, bored and reamed to size.

Diameter of shaft, inches.	1 1/2"	1 1/4"	1 1/8"	1"
Price each	\$1.00	\$1.35	\$1.65	\$2.00
Diameter of shaft, inches.	2"	2 1/4"	3"	3 1/2"
Price each	\$2.80	\$3.40	\$4.10	\$5.00

Solid Journal Bearings

For use where lowest price is an object. Bearings are babbitted, bored and reamed. Oil pocket position permits use in vertical position when so desired.

Diameter of shaft, inches.	1 1/2"	1 1/4"	1 1/8"	1"
Price each	\$0.95	\$1.20	\$1.50	\$1.80
Diameter of shaft, inches.	2"	2 1/4"	3"	3 1/2"
Price each	\$2.70	\$3.20	\$3.60	\$4.50

Adjustable Ball and Socket Pillow Blocks

In addition to the ball and socket connection of the bearing in the frame, this pillow block offers the additional advantage of a vertical adjustment of the bearing, which makes it possible to line up the shafting.

Size of shaft, inches.	1 1/2"	1 1/4"	1 1/8"	1"
Price, standard bearing	\$4.45	\$4.55	\$6.65	\$ 8.70
Price R. O. bearings	5.45	5.70	8.80	10.95
Size of shaft, inches.	2"	2 1/4"	3"	3 1/2"
Price, standard bearing	\$13.45	\$15.40	\$19.55	\$20.00
Price R. O. bearing	16.40	19.00	28.25	31.00

Post Hangers

Adjustable ball and socket type with double braces.

Bearings reamed and faced.

Bases are ground to a flat, even surface so that no shimming or wedging is necessary to get a firm stand on beams or posts.

Diameter of shaft, inches	1/2"	3/4"	1"	1 1/4"	1 1/2"
Price, standard bearings	\$4.40	\$4.50	\$5.50	\$5.60	\$7.15

Hyatt Roller Line Shaft Bearings

Hyatt roller bearing line shaft boxes are rapidly gaining favor in factories and shops where line shafting is used, owing to the great saving in power consumption.

Minimizing friction losses, durability and long life, certainty of operation, ease of assembly, and oil saving effected, are features that make the Hyatt line shaft bearings very desirable.

The Hyatt line shaft bearing is practically indestructible; saves 65 per cent overhead power loss, compared with plain bearings, and requires a minimum amount of attention.

Post Hanger

Four Point Adjustment Bearings

Duplex Oiling

The four point bearings illustrated below are of the most modern and approved designs. The metal throughout is distributed to minimize shrinkage, strains and flaws, and points of greatest strain are heavily ribbed. All have liberal vertical and horizontal adjustments secured by four set screws.

Four point Duplex Oiling Bearing
—Ends Reamed.

Adjustable Four Power Drop Hangers

Duplex Oiling

Allow 2-inch vertical and
3-inch lateral adjustment.

Made from high grade carbon crucible tool steel from special analysis, heat treated and oil tempered. They are free from flaws, accurate to size and are practically perfect spheres. They will withstand heavy pressure and high speed.

Ball Radial Bearings

The rings of these bearings are of the best chrome bearing steel and are hardened by a special process which renders the metal hard and tough. It is superior in every way to case hardening.

The balls are of the highest grade chrome steel and are accurate to .0001 inch.

Ball Thrust Collar Bearings

One Ball Thrust Cage, Two Hardened Steel Washers

Plank Unit Flexible Shafting

These flexible shaft units are drop forged out of the best grade of Chrome Nickel Steel, accurately machined and heat treated.

A patented tenon and mortise interlock is the method used connecting the units of the flexible shaft together. This type of an interlock allows maximum flexibility and a given amount of longitudinal play, which will take care of the different curvatures the shaft is placed in. The units can be disconnected one from the other, by removing them from the casing and placing one unit at ninety degrees to its adjoining member. This shaft can be taken apart and put together again without the use of a single tool.

A guarantee covers this shaft in respect to material, workmanship and satisfaction, providing the simple instructions are properly followed.

We are in a position to furnish a large variety of different types of machines both electrically and mechanically driven to take care of practically all requirements, so if you do not happen to see what you may want on these pages, we will be very pleased to have you state your requirements and we will forward you complete specifications immediately, showing a large variety of different types of outfits.

The above illustrations show the flexible shafting both inside the casing and out, and also mechanical method by which the units are connected known as a mortise and tenon.

Portable Flexible Shaft Motor Driven Grinding and Drilling Outfit

No. 4. This outfit is a very practical one to be used in machine shops and foundries and numerous other places doing similar work. The motor is mounted on a turret, and the turret upon a four-wheel roller bearing truck. It has a two H. P. 60 cycle 3 phase, 1800 R. P. M. motor truck, reinforced cable and connections, 8 feet of 3/8-inch flexible shafting and an emery wheel with a capacity of 10 inches. Price complete.....\$162.75

Suspended Type

No. 1. This suspended type is an exceptionally convenient type in as much as it is always out of the way. It can be suspended from the ceiling on a trolley which can be easily directed to any part of the shop. 1/4 H. P. 60 cycle single phase, 110 volt 1200 R.P.M. motor, 6 feet 3/8-inch flexible shafting, clamp spindle emery wheel arbor and guard, clipper attachment, 20 feet lamp cord.

Price complete.....\$84.75

Equipped with 1/4 H. P. D.

C. 110 V. 1200 R.P.M. motor,

price complete.....\$77.25

Portable Grinding and Drilling Outfit

No. 3. A similar outfit to the one described above except that it is much smaller. It can, however, be used for the same purposes on a smaller scale. It has 1/4 H. P. 60 cycle single phase, 110 V. 1800 R. P. M. motor, 6 feet 3/8-inch flexible shafting, clamp spindle emery wheel arbor and guard, 20 feet lamp cord and stand. Price complete.....\$80.00

Same outfit equipped with 1/4 H. P. D. C. 110 V 1700 R. P. M. motor, price complete. 76.00

Plank Unit Flexible Shafting

Radial Arm Outfits

- No. 5. Balanced radial arm outfit with automatic friction engagement and 6 feet $\frac{3}{4}$ -inch flexible shafting with emery wheel capacity 8x1 $\frac{1}{4}$ inches, price complete. . . . \$79.25
Equipped with 8 feet $\frac{3}{4}$ -inch flexible shafting, price complete. . . . 89.25

Plank flexible shaft outfits are assembled in both electrical and mechanical driven types to handle heavy and light duty grinding, drilling, polishing, surfacing, clipping, nut and stud driving, screw driving and numerous other requirements.

Only the best grade of material and workmanship are used in their entire construction, making the simplest, strongest and most durable flexible shaft outfits manufactured, with an absolute guarantee covering material, workmanship and to give perfect satisfaction.

Heavy Duty Bench Arbor

- No. 7. Heavy duty bench arbor, 6 feet $\frac{3}{4}$ -inch flexible shafting, clamp spindle emery wheel arbor, 8x1 $\frac{1}{4}$ -inch emery wheel capacity, price complete. . . . \$50.00
Equipped with 6 feet $\frac{3}{4}$ -inch flexible shafting, emery wheel capacity 10x1 $\frac{1}{2}$ inches. . . . 53.00

- No. 9. Heavy duty counter shaft, 6 feet $\frac{1}{2}$ -inch flexible shafting, clamp spindle emery wheel arbor and guard, emery wheel capacity 4x1 $\frac{1}{4}$ inches, price complete. . . . \$39.00
Equipped with 6 feet $\frac{3}{4}$ -inch flexible shafting, emery wheel capacity 6x1 inch. . . . 43.75

Jack Shaft with Universal Joint

- No. 6. Jack shaft, universal joint and bell governor, 6 feet $\frac{3}{4}$ -inch flexible shafting, clamp spindle emery wheel arbor and guard, 6x1 inch capacity, price complete. . . . \$49.50
Equipped with 6 feet $\frac{3}{4}$ -inch flexible shafting, 8x1 $\frac{1}{4}$ inch capacity, price complete. . . . 44.25

Three Step Sheave Pulley

This type of an outfit is generally used in foundries for grinding heavy castings. The outfit can be equipped with different lengths of shaft to answer all requirements. The shifter is automatically locked when placed in position. The object of the three-speed sheave pulley, is that as the emery wheel decreases in size, the speed of the shaft is increased in a like proportion so that at all times the rated amount of speed is maintained. This outfit can be equipped with

breast drill and the other accessories, which makes it very complete.

- No. 8. Three-step sheave pulley, floor sheave, universal joint and bell governor 6 feet $\frac{3}{4}$ -inch flexible shafting, clamp spindle, emery wheel arbor and guard, counter weight, price complete. . . . \$64.25
Equipped with 6 feet $\frac{3}{4}$ -inch flexible shafting, less universal joint and bell governor. . . . 67.90

Right Angle Drives

A Means of Transmitting Power at Right Angles, Without the Use of Mule Stands or Bevel Gearing

This drive is simple and positive as well as absolutely uniform in its action.

Its mechanism consists of a bell-crank sliding on a vertical shaft and pivoted at either end to sleeve sliding on a crank pin; the transmission of motion may be easily understood by a study of the drawings.

All parts are made of suitable material and the crank shaft and pins of highest grade steel. All working parts are enclosed in an oil tight case and run in an oil bath, therefore every bearing must receive proper lubrication if the supply of oil is renewed at intervals of several months. Each drive is tested before shipping. The outfit is self-contained and shipped complete with pulleys, ready to be hung in position.

Sizes and Prices

No.	Horse Power	Maximum Speed	Shaft Inches	Pulley		Drop, Inches	Weight, Pounds	List Price
				Diameter, Inches	Face, Inches

Crated individually. Other proportions up to 14-inch diameter driver and up to 2 3/4-inch width of face on T. & L.

These are shipped mounted on skids. Other proportions can be furnished to special order. Driving pulley up to 18-inch diameter by 2 3/4-inch face; tight and loose up to 2 3/4-inch face.

H.Channon Company Chicago

Solid Cast Iron Belt Pulleys Machine Moulded, Finished and Balanced

Cast iron pulleys are not carried in stock, but are made up to order only in our Chicago foundry and can be shipped promptly—usually three or four days.

Cast iron pulleys are not returnable, so be careful to give the following particulars when ordering:

Diameter, width of face and bore of pulley—whether crown or straight face, whether key-seated, set-screwed, or both, and whether for single or double belt. Unless otherwise specified, crown face pulleys are always furnished.

Pulleys, when both key-seated and set-screwed, tight and loose, split and flanged, are subject to an extra charge above prices given in table below.

Maximum Bores for Cast Iron Pulleys

Diameters, inches	6 to 9	10 to 15	16 to 20	21 to 30	31 to 42	43 to 48	49 to 60
Maximum bores, inches	2 5/8	3 1/2	4 1/2	5 1/2	6 1/2	7 1/2	8 1/2
Extra for larger bores:	(10% for each 1/8 in. or fraction.)	(10% for each 1/8 in. or fraction.)	(10% for each 1/8 in. or fraction.)	(10% for each 1/8 in. or fraction.)	(5% for each 1/8 in. or fraction.)	(5% for each 1/8 in. or fraction.)	(5% for each 1/8 in. or fraction.)

Pulleys with bores larger than maximum furnished in double belt only.

Cast Iron Split Pulleys

Carried in stock for immediate shipment

Price Each

In these pulleys, rim is cast whole, then split by fracture at the parting line, thus when fractured edges are matched together and bolted they fit so as to form practically a solid rim pulley. There are no riveted joints to work loose or shear.

The Standard Bores Adopted for these Pulleys are as Follows:

6 to 9 in. (inclusive) . . . 2 1/2 in.
10 to 24 in. (inclusive) . . . 2 3/4 in.
25 to 36 in. (inclusive) . . . 3 1/2 in.
37 to 54 in. (inclusive) . . . 3 3/4 in.
Bushings for all other shaft sizes.

American Pulley
Carried in Chicago Stock

American and Oneida Steel Pulleys same prices.

The American Pulley can be furnished from stock in all sizes up to 60-inch diameter by 16-inch face; the Oneida in all sizes up to 72-inch diameter by 16-inch face. Other standard sizes of either style can be furnished promptly from factory. Split loose bushings for all standard sizes can be furnished from stock.

H. Channon Company Chicago

Wood Split Pulleys

We offer the highest grade wood split pulley at the same price as you would have to pay for inferior makes and can give quick shipment from Chicago stock.

Every detail of the manufacture of this pulley has been developed to a high degree of mechanical and economical excellence. The lumber is thoroughly seasoned, dovetailed and glued together—not nailed—tests have proven that the wood itself will split before a glued joint will give way. The rim and arm joints are dovetailed, wedged, glued and bolt-anchored.

The flat arm bars, continuous from rim to rim diametrically across the pulley, form integral double levers of great strength, well adapted for carrying the driving load, at the same time affording ample support to the rim for resisting lateral pulls, due to belt tensions. Pulley faces are "case-hardened" by special process.

All other sizes at proportionate prices.

All Pulleys are carefully balanced and inspected and are guaranteed to transmit more power with the same belt than any iron pulley made with like belt tension.

The compression fastening is guaranteed to hold perfectly and to be a better fastening than set screws.

Paper Pulleys

The advantages of paper pulleys are: 1. Reduced Slippage; 2. Decreased Belt Tension; 3. More Power Transmitted; 4. Lower Total Cost of Pulleys and Belting.

The lighter tension on the belt reduces all strains, permitting lighter shafting, hangers, etc.; reduces consumption of oil and annoyance and loss from hot bearings. There being minimum slipping of the belt, wear is decreased and the item of belts in the expense account is materially reduced.

There being no shrinkage strains as in cast iron, or numerous pieces as in wood pulleys, they may be run at very high rates of speed with safety, and are not easily damaged in handling. Another point of merit is that they are not injured by steam or atmospheric conditions.

Paper pulleys may be relied upon to transmit all the power a belt will carry without tightener, the belt, not the pulley, being the limit. Paper is of uniform density and, being turned inside and out, the pulleys are perfectly balanced.

Being non-breakable, paper pulleys take a low freight classification and on account of their light weight the cost of transportation is small. They are fully one-half lighter than similar cast iron pulleys, admitting of lighter shaiting and hangers, decreasing the cost of plant and maintenance, and being correspondingly easy to put up.

When Ordering Paper Pulleys the Following Specifications Should be Given

1. Number of pulleys wanted.
2. Diameter (D).
3. Total width of face (F).
4. Width of belt.
5. Exact bore or shaft diameter (B).
6. Width of keyway.
7. Depth of keyway in pulley.
8. Length of hub.
9. Distance from end of hub to edge of rim (O).

H. Channon Company Chicago

Power Transmission Equipment

Spur Paper Friction Wheel

Paper wheels must always be used on friction gearing where machinery is frequently thrown in and out of gear and for reverse motion, which is engaged and disengaged by a slight movement of the lever attached to the eccentric or end thrust box which forms one of the journal bearings thus dispensing with a clutch. When ordering give diameter and face of friction bore and size of key seat.

Stationary Mule Stand

Complete with ceiling plate, guy rods, tension turn-buckles, etc., and all iron pulleys.

As regularly made the pulleys on this mule stand should never run faster than 300 R. P. M.

Stand No.	Belt Width, Inches	Size Pulley, Inches	Length of Standard Ft., In.	Price Each
2	2	10x 3	4	\$22.50

Style B Friction Clutch Pulleys

This clutch is simple, compact, easy to adjust—with maximum power—as a large friction surface is obtained within a small space, on a disc between two plates, which are connected with powerful toggles.

The movement of one part adjusts all toggles and gives equal pressure on the friction surface.

Friction blocks are of hard maple riveted to friction plate with copper rivets—the blocks are also supported on both sides by flanges on the friction plate—which is finished all around as are the wooden friction blocks.

This clutch can be fitted to sheaves, gears or sprockets in the same manner as to pulley shown in illustration.

The Master Band Clutch Pulley

This clutch is extremely simple and easy to adjust and requires very little space on the shaft.

It is a good clutch pulley for line shaft and counter-shaft work.

Give size of shaft and keyseat. Add 40% if clutch is bolted to arms and end sketch.

Avoid wasting your oil, by storing it in Channon's Steel Barrels.

Gasoline Engine Clutch Pulley

No. 1 Clutch Key Seated to Shaft

These
Clutches
can be
furnished
with lever
in place
of hand
wheel
when
desired.

No. 2 Clutch with Spider Bolted to Arms of Flywheel

This friction clutch pulley has been adopted after a great many years experimenting with various styles of friction clutches.

The toggle arrangement is very powerful, also has a positive release. The friction is fibre to iron. The fibre takes all the wear, is easily replaced at small cost, making the clutch as good as new. All parts are in plain view and are readily accessible. Adjustments are easily made by means of a threaded ring and clamping bolt, making the pressure on all toggles uniform.

In ordering, send sketch showing diameter and length of shaft, size of key seat and when No. 2 clutch is required, give also diameter of hub, diameter of bolt circle, number and size of bolts. Always state horse power and speed of engine.

Style D Friction Clutch

This cut illustrates our style D friction clutch. Because of the few parts and unusually simple design. Do not mistake it for a light and delicate clutch, as on the contrary it is made for hard service at both low and high speeds.

They are made with standard sleeves to which a pulley, gear, sprocket, or sheave can be fastened, and are also made as clutch pulleys using the clutch mechanism without the sleeve.

We use this type for countershaft service and make them in duplex for any condition requiring duplex clutches.

Price with Standard Sleeve

Bevel Gearing

A pair of Bevel Gears consists of two gears of different diameters running together at right angles, the smaller being called the pinion.

The "backing" is the distance the hub extends back of the pitch circle. Pitch for bevel gears is measured at large end of teeth.

No. of Pat.	Price each	No. of Teeth	Pitch Diam.	Face	Pitch, inch	Backing	Proportion	No. of Pat.	Price each	No. of Teeth	Pitch Diam.	Face	Pitch, inch	Backing	Proportion

Other sizes, also Cut Gears, quoted upon request.

Mitre Gearing

A pair of mitre gears consists of two gears of the same diameter running at right angles to each other.

No. of Patt.	No. of Teeth	Pitch Diam.	Face	Pitch in.	Back-ing	Price each

Spur Racks and Pinions

Price List

Pitch	Face	Price per Foot Rack
1 1/4	1 1/4	\$0.60
1 1/2	1 1/2	.80
1 3/4	1 3/4	.90
2	2	1.00
2 1/4	2 1/4	1.35
2 1/2	2 1/2	1.60
3	3	2.00
4	4	2.50
5	5	3.00
6	6	

For pinions to run on racks see plain spur gears. Any plain spur gear will mesh with a rack of corresponding pitch.

In ordering spur racks state the number of teeth, pitch and face, also number of lugs on a side as well as the backing, if desired otherwise than shown in the catalogue.

Worms and Worm Gears

Closed End Pintle Chains

400 Class

Riveted

Detachable

A very strong and serviceable chain for conveying or power transmission work.

It is designed to fit standard link belt sprocket wheels and to replace that form of chain when greater strength is required, or when a closed joint chain is preferable owing to the presence of grit which rapidly wears out chain of the open hook form.

In ordering state whether riveted or detachable chain is required.

Steel Bushed Roller Chains

E. C. Class

A high grade low priced steel roller chain with case hardened steel pins and bushings. It is designed for power transmission only and to replace standard link-belt when the speed is too high for that type of chain or when greater strength is required. It fits standard link-belt sprocket wheels of sizes indicated by numerals in the size number.

Furnished with either malleable iron or steel rollers.

Coupler

Owing to its great strength, durability and moderate price, this has become the most popular chain used for elevating and conveying heavy materials, such as broken stone, sand, gravel, coal, etc. The closed joints render it the most economical chain for handling gritty materials when first cost is considered.

5 1/8-inch.....												2.80	7.00
5 3/8-inch.....													5.75

Wheel prices are based on hub length not exceeding twice the diameter of bore. An extra charge will be made when longer.

Standard "Salem" Steel Elevator Buckets

Made from one sheet of steel, with round corners and bottom. The side pieces are bent around the back and riveted as shown. The seams at the lower corners are bent under and hammered tight.

Sterling Riveted Elevator Buckets

The smaller sizes are made of tin and the larger of smooth refined steel. The ends are double seamed to the body and guarded with band iron firmly riveted, making the bucket light and firm. The shape is adapted to a quick and easy discharge of contents.

Malleable Iron Elevator Buckets

Style "A"
For cement, coal, chemicals,
pulp, etc.

Style "B"
For ores, stones, etc., in
inclined elevators.

Style "C"
For sugar, clay and
sticky materials.

These buckets are cast in one piece and carefully annealed, they are seamless, strong and smooth and their rounded corners guarantee free delivery of the material handled. Punched as directed at no extra charge.

Before we can quote intelligently, we must know: 1.—Nature of material to be handled. 2.—Quantity in pounds, or bushels or cubic feet per hour. 3.—Height material is to be elevated and whether perpendicular, or at what incline. 4.—Speed and diameter of shaft from which power to drive elevator is taken. 5.—State whether elevator is to be driven from top or bottom. 6.—What type is wanted, see cuts above.

Elevator Legs

Double Leg Steel Casing
Style No. 6

Single Leg Steel Casing
Style No. 7

Single Leg Wood Casing
Style No. 8

Steel Elevator Legs are now used extensively where hot, dusty or damp materials are handled. No. 6 style is made with either square or round casings. Legs can be made any style or of any gauge of metal desired.

Standard Portable Crushed Stone and Ore Elevators

Built with wood frames in lengths up to 100 feet. Lengths less than 31 feet built with single head, over 30 feet with geared head, unless otherwise specified. The shafting and head and boot pulleys are of liberal dimensions, the idler rolls of steel and all bearings proportioned for strength and long service. Suitable take-ups are provided at foot of elevator to take up slack of the belt and the belts used are of the best quality, thickness of belt varying with length of same.

The following table gives sizes and dimensions of our standard elevators.

These elevators are furnished complete with geared countershaft head drive, but prices below do not include the belt, as purchaser's preferences call for freedom of selection in this regard. We prefer to furnish Balata Belts and guarantee them to give better results than canvas or rubber.

The number of buckets supplied in each case is suitable for the approximate length of belt as given in the table.

Extra Heavy Helicoid Conveyor is mounted on extra heavy pipe or on solid shaft. When mounted on solid shaft, we furnish special couplings to suit conditions. Above prices include one regular hanger for each standard length of conveyor, but does not include lining. When required, this is furnished at an additional price. Special hangers made to suit different kinds of work.

See next page—Directions for ordering.

How to Order Screw Conveyors

Indicate which of the diagrams below is wanted—it will avoid any possible error, also state whether right or left hand. Changing a conveyor end for end does not change it from right to left hand.

H. Channon Company Chicago

Champion Brand Leather Belting

Highest Quality

Our Champion Brand of leather belting is all that the name implies. There is none better made. It is a strictly short lap and short piece belt, made from heavy center stock, which is the best part of the hide, and tanned with pure oak bark. No piece longer than 50 inches is used. Uniform thickness and quality throughout. Intended for all regular service, except where exceptionally severe conditions are encountered, and the use of an extra heavy belt is imperative. Made in single, double and triple weights or plies and any width. This belt is absolutely guaranteed to give entire satisfaction.

Harrison Brand Leather Belting

Second Quality

This is a good quality, medium weight belt, which will give good service where high speed and heavy duty is not required. Made with the same careful workmanship as our Champion Brand, but lighter stock is used. In buying leather belting it should be remembered that the best is none too good and we recommend our Champion Brand.

Special Light Double, Leather Belting

For high speed and light loads, such as on dynamos, motors, fans, blowers, etc., especially where small pulleys are used, we particularly recommend this belt. It is made in double thickness only, from first cut, light shoulder stock. If the high speed is used in connection with heavy duty, we advise the use of a light, double Champion Brand belt, which is made of strictly center stock and is much stronger than the shoulder leather.

Special Creamery Leather Belting

First Quality

For use in creameries, our Special Creamery Belting will be found to be the best belt that can be produced for the purpose. It is made of heavy, first quality center stock, absolutely uniform in thickness and weight. Made in single thickness only, waterproofed to withstand the dampness and laps stitched to prevent opening.

Anhydrous Leather Belting

This belt is peculiarly suitable for use in steam laundries. It is a mineral tanned belt, light green in color. It is very soft and will not become hard after being wet. Made from center stock and strictly first quality.

We can furnish endless leather belts of any grade and can make shipments the same day order is received in most cases. Belts also furnished with prepared ends.

Channon's Special Genuine Balata Belting

For Heavy Duty and High Speed

The best belt for every purpose because of its enormous tensile strength, resistance to stretch, unequalled transmitting ability, immunity from deterioration, solidity of texture, absolute uniformity, and the fact that it is positively waterproof.

Balata belting is especially adapted to hard work, such as high speed and hard drive transmission. It is particularly recommended for use in saw mills, paper mills, mines, breweries, packing houses, and all places where belts come in contact with water, steam, alkalis or chemical fumes.

An European invention, Balata belting was used many years before its introduction into this country and further American experiments have developed it to a state of near perfection.

Balata is a vegetable gum of enormous strength, immune from oxidation, the peculiar qualities of which do not permit of its being compounded with any other ingredients. The duck used is very closely woven, unlike that used in rubber belting, and is of 38-oz. weight.

We guarantee our Balata belting to be absolutely proof against the action of water, steam, animal oils, alkalis or chemical fumes—to have the minimum stretch, to be practically proof from age deterioration, and by any test the most powerful belting in the world.

Being strong and non-stretching, it is an excellent drive belt, and unaffected by moisture, it will work continuously where other belting would be ruined in a short time. Balata belting does not slip and requires no dressing.

For outdoor work it is unequalled, no weather affecting it. It is the only satisfactory belt for conveying work, being waterproof throughout (not merely on the cover), with no danger of moisture separating the plies, and lasting from two to three times as long as any other belting.

Comparing the initial cost with the length, quality and reliability of service, Balata is the most economical belting in every way. We make Balata belting endless in one day, the splice being no thicker than any part of the belt.

Balata Belting can be made in any width and in any number of plies.

Victor White Woven Cotton Belting

Woven Cotton Belting is a low priced belt, giving very good service for light conveying purposes, indoors. It is used largely in elevators, bakeries, etc., and for carrying packages and other light weight materials.

It is made by weaving several layers into a solid body. The thickness is designated by the stripes, 4 stripes indicate 4 ply, 6 stripes, 6 ply, etc.

This belting is not waterproofed or painted and cannot be woven endless. In cutting holes for lacing, use a pointed instrument to push the fibres apart.

IMPORTANT—This belting is not waterproofed or painted and should not be confused with canvas belting. It cannot be woven endless. Do not cut lacing holes with a hollow punch.

Our Boughton Belt Dressing is equal to any bar dressing made.

Stitched Canvas Belting

Our Canvas Stitched Belting is made of first quality, long fibre, closely woven cotton duck, with four rows of stitching per inch in width. It is thoroughly saturated in a water-proofing compound and painted with a red composition paint, which gives it an excellent surface for the pulley, and is an additional preservative. It is not affected by heat or cold and will remain flexible under all conditions. It will run true and will not freeze in zero weather. Thoroughly stretched before leaving the factory. Especially adapted for places subject to varying temperatures or where belting will receive hard usage. Recommended for threshers, sawmills, quarries, wood working plants, etc.

A large stock of all regular sizes are carried in two grades, Sampson Brand and Boughton Brand.

Sampson Brand

This is a strictly first quality canvas belting made of thirty-two ounce duck and is equal to any stitched canvas belting made.

It is widely used for main drives, transmission, elevating and conveying purposes, being cheaper to install than rubber belting and in some places is just as efficient.

Boughton Brand

This grade is the one generally used. Its quality is identical with the Sampson Brand excepting that it is lighter in weight. It can be used for the same purposes, where a more inexpensive belt is desired.

Endless Belts

When endless canvas stitched belts are wanted, state the net length wanted. An extra charge of 3 feet is always made to cover the cost of labor in making the splice. There is usually a considerable delay when belts are made endless, varying from 1 to 3 weeks. Unless it is absolutely necessary to have belts endless we recommend the use of belt lacing, which saves the cost of the extra feet and the delay involved.

Rubber Belting

The most satisfactory rubber belting on the market. A different grade for each purpose. Each grade represents the highest value it is possible to offer for the money.

President Brand A special hard service, friction surface belt, designed to meet the requirements of the most severe conditions. We recommend this brand for use in saw mills or paper mills, or for any especially heavy work. Suitable for heavy main drives, due to the friction surface. Made of the highest quality 32-ounce duck.

Bullock Brand A grade of belting that is very satisfactory for ordinary service. We guarantee this belt for any work that is not extraordinarily heavy. Made of heavy quality duck. Strong, flexible and reliable.

Special Elevator Belting A belt of great tensile strength for elevator service. We can furnish this belting on short notice, most sizes from stock.

Stitched Rubber Belting Especially designed to prevent ply separation under conditions where the belt is exposed to oils, acids or moisture. Prices on application.

Conveyor Belting Constructed for carrying materials, such as ore, coal, sand, gravel, etc. Surface reinforced with pure rubber cover $\frac{1}{8}$ to $\frac{1}{4}$ inch thick, according to nature of work. Write for prices.

Stanley Belting

Used all over the world for transmitting power and conveying and elevating materials. It is a solid woven cotton belting, impregnated with a special compound. Under normal conditions will not stretch more than 2 per cent, which is usually taken out the first 36 hours, thus eliminating continual stoppage for taking up belt. The most flexible belt made, and will cling to the pulleys, producing a greater arc of contact. It is absolutely uniform in thickness, with edges having a special selvage, which does not easily fray. "Stanley" is unaffected by extreme heat, and is not injured by grease, oil, gases, water, steam, etc., but if used in places which are alternately wet and dry, an idler pulley is recommended.

Made in Scotland

Announcement

We are prepared to furnish beltings of all descriptions for all kinds of work, and on short notice. Our stock is large and complete.

When in doubt as to the proper belting to be used, and that which will render the maximum of efficiency, take advantage of our many years of practical experience in this line, and send us your inquiries. We earnestly solicit them, and they will be taken care of promptly and correctly.

A Few Words About the Quality of Our Belting

We especially recommend our Champion leather belting, as it is unexcelled in quality. Made of pure oak-bark slow process tanned leather, cut from center stock within 15 inches of each side of the backbone. Is of solid leather throughout—no "Shims"—nor made plumb through other deceptive means.

Our Bullock rubber belting is recommended and guaranteed for all excepting extraordinary heavy services for which we offer our President brand. This is absolutely of the highest grade obtainable.

Round Leather Belting

Solid

Twisted

Solid Round Leather Belting is made from center stock, oak tanned leather. It is firm, solid, thoroughly stretched and finely finished. All sizes from $\frac{3}{16}$ " to $\frac{3}{4}$ " are carried in stock.

Round Twisted Leather Belting is mostly used in sizes from $\frac{3}{8}$ to 1 inch, which are too large to be cut round from solid leather. The leather is folded in such a manner that it makes a perfectly round belt. This belting is made from the best oak tanned leather.

Diam., Ins.	Per Foot Solid	Per Foot Twisted	Diam., Ins.	Per Foot Solid	Per Foot Twisted

Cling Surface Belt Preservative

Cling Surface is a preservative, a special treatment for belts to attain special results. Leather and other materials used for belts have difficult and exhausting work to do, and to be able to give best service, and to last, need care and special treatment.

Cling Surface filters through the surface fibres into the belt, leaving it with a soft, velvety face, and a clinging surface. There is nothing on the face, it is in the face. It lets the belt grasp the pulleys and pull. It enables belts to be run slack, and to grip a greater area of the pulleys. Belts to which Cling Surface has been applied will never slip, never stick, must grip, pull for the required instant and release without effort.

Put up in 10, 25, 50 and 100 lb. packages. Full directions sent with each package.

Price, per pound.....\$1.70

Belt Clamps

No belting user should be without one or more sets of belt clamps. Belts should not be laced while off pulleys, many being ruined by this practice. When done with wide leather belts, a "crook" nearly always results, which never comes out until belt is repaired.

Using belt clamps prevents making crooked belts, and lacing is made much easier and quicker. Frame is hard wood, jaws corrugated, making it practically impossible for belts to slip when properly placed in clamp.

Our belt clamps combine simplicity, strength and convenience.

Boughton Belt Cement Dressing and Wire Lace

Boughton Belt Cement is made of the purest gelatines procurable, and so condensed that it requires twice the quantity of water to reduce it to the proper consistency for use, as ordinary belt glue. For this reason Boughton Belt Cement is very economical. Most belt glues make a hard, crackly joint, stiff and difficult to bend at first. Because of its greater adhesive qualities, it takes a smaller quantity of Boughton Belt Cement to make a joint, and the splice is soft and pliable. It is put up in one pound cans and costs no more than ordinary belt glue.

Price, per can.....\$1.60

Boughton Belt Dressing is made only from the grease extracted from sheep's wool before it is woven into cloth. Tanners use this same grease for softening hides after tanning, as it is the only pure animal grease obtainable. Boughton Belt Dressing is applied to the moving belt.

the friction produced melting and spreading it. No time is lost in heating this dressing or in stopping the machinery for application.

Boughton Wire Belt Lacing is of special secret alloy, possessing great strength with convenient flexibility for lacing belts. Each box contains fifty lineal feet of lace. Made in five sizes.

Bristol's Steel Belt Lacing

Staggered Point for all Kinds of Belting

Easily and quickly applied with a hammer to new or old belts and makes the strongest kind of a joint. The wedge shaped points driven through belt force the fibres aside without cutting them. It makes flexible joints which conform to crowning of pulley and runs smoothly even on small pulleys. The staggered point principle of the hooks is the improvement which makes this kind of lacing applicable to all kinds of belting.

Thickness of Belt	No. of lace and kind of belting			Price per Box

Each box contains assorted lengths enough to lace 100 inches in width of belts. Can be used in leather, rubber, cotton, woven and all other belts.

Alligator Steel Belt Lacing

For use with leather, balata, rubber, canvas and cotton belting. Makes a flexible hinge joint. Points are sharp so that no tool is required but a hammer. No punch holes are necessary. Overcomes the tendency of fabric belts to fray at the ends. A very popular belt lacing. Packed in boxes complete with extra hinge pins in 12 inch length which can be cut to suit requirements.

Clipper Belt Lacing Machine

Operation of this machine is very easy and simple. Hooks are furnished on cards, and placed in the machine in that condition. The card itself is withdrawn and end of belt inserted as illustrated. Pressure is applied on handles and the belt is laced. The two ends of the laced belts are joined with a rawhide pin, making a hinge joint which is flush with the surface of the belt, and which will go around small pulleys with ease.

The "Clipper" will lace light weight belts of any width easier and quicker than any other way. Price each, - - \$15.00

Cut shows actual size of hooks

Each box of hooks contains 27 cards of 37 hooks each, and 14 rawhide pins, lacing 84 inches of belting.

Dependable Garden Hose

Elastic Brand

For those who realize that "the best is the cheapest in the long run," we cannot too strongly recommend our Elastic garden hose. We honestly believe it is without a superior, regardless of price asked.

It is impossible to kink Elastic hose, regardless of how it is bent, twisted or pulled around trees or sharp corners. It cannot crack crossways because it will not kink and it cannot open at the seams, the most common fault of garden hose, because it is seamless.

Elastic hose consists of a seamless tube of pure rubber, over which is braided jackets of twisted cotton yarn, between which and on the outside is a layer of rubber, which when it is vulcanized is forced through the strands and is practically a solid tube of rubber reinforced with strong fabric.

Furnished in $\frac{3}{4}$ and $\frac{1}{2}$ -inch, in any length up to 500 feet. Couplings are attached without charge to sections of 50 feet.

Price per Foot

$\frac{3}{4}$ -inch	\$0.22
$\frac{1}{2}$ -inch20

Channon's Special

In our "Channon's" Special 7-ply garden hose we offer one of the greatest values. It is made in one size only, $\frac{3}{4}$ -inch, with 7 plies of heavy sheeting duck spirally wound on a high grade rubber lining and covered with a layer of red rubber.

It is intended for heavy duty and will not kink. Concrete contractors find it highly satisfactory. Furnished in 25 and 50-foot sections.

only, complete with couplings.
Price per foot.....

\$0.28

Bullock Brand

Our Bullock brand has been our standard for a great many years. It is made in three or four-ply, heavy duck construction, first quality throughout. We can honestly recommend this hose for all general purposes. Furnished in 25 and 30-foot sections, coupled.

Price per Foot

$\frac{3}{4}$ -inch, 3-ply	\$0.22
$\frac{3}{4}$ -inch, 4-ply	\$0.26

Lawn Hose

This is a special hose, made in $\frac{3}{4}$ -inch, 5-ply heavy sheeting, suitable for medium pressures and all ordinary domestic uses. Guaranteed for one season. This grade is often sold in hardware stores throughout the country at a much higher price. Sold in 25 and 50-foot sections only, coupled.

Price per foot.....

\$0.18

Sampson Cotton Garden Hose Rubber Lined

For those who prefer cotton rubber lined garden hose we offer our Sampson brand. When carefully dried after use it will be found more serviceable than rubber hose of equal price. Furnished in one size only, $\frac{3}{4}$ -inch, in 25 and 50-foot sections.

Price per foot.....

\$0.20

Please Note Special Discounts on Garden Hose in Discount Sheet.

Hose

We carry one of the largest stocks of hose in the city of Chicago, both in our main store and warehouse. This stock consists principally of the regular sizes of water, steam, suction, linen and fire hose, so that we may fill all orders immediately for practically any quantity that may be required. We also carry irregular sizes and kinds of hose not obtainable on short notice elsewhere. For instance, we stock water hose as large as three and four inches diameter, four ply, two inch, six ply rubber steam hose, flexible steel armored steam hose up to two inch in all regular length sections. Our suction hose stock is the largest in the West, factories not excepted. Our customers have learned that they can expect prompt shipments of all orders for any quantity of hose they may require. On this and the following pages we describe and price the different kinds of hose we sell. Send us your orders for all kinds of hose and particularly when you are in need of it promptly.

Suggestions on the Care of Hose

We give here a few practical suggestions on the care of hose, which if observed will greatly prolong its life and add to its utility. We refer to rubber hose in particular, which should be kept in a cool moist place when not in use. Heat dries out the rubber and causes it to crack, rendering the hose useless. Oils and greases of any kind are highly injurious to rubber and every possible precaution should be taken to keep the hose free from them. The strength of the hose lies in the duck insertion, the rubber merely acting as a waterproofing agent. As soon as moisture gets in contact with the duck it causes the plies to separate and the life of the hose will be very short.

When hose is used to conduct steam, liquids or air under high pressure the shut off or regulating device should always be at the source of supply and not at the nozzle of machine, leaving pressure in the hose. Kinking or bending the hose at sharp angles is very injurious, but the practice is very common with inexperienced laborers employed by contractors, and when the hose does not give the proper service it is thought to be of inferior quality.

Iron pipe nipples should never be forced into hose to take the place of couplings unless the hose is made with enlarged ends for that purpose. This practice ruins more hose, especially suction hose, than probably any other. When the pipe is forced in, it cuts the rubber lining, which permits the moisture to get in contact with the duck. This causes separation of the plies and seams of the hose. In suction hose the water separates the tube from the rest of the hose and when suction is applied the lining breaks down. Couplings should always be used, and they should be applied with care. When they do not enter the hose easily, soap, rubber cement or ordinary glue should be applied.

Cotton rubber lined hose should always be thoroughly dried after use, and stored in a well ventilated place to prevent the cotton jacket from mildew. It should never be kept folded on racks like unlined linen hose, but should be wound on a reel. Water should be run through the hose at least every two or three months to prevent the rubber from drying out and cracking.

Rubber Water Conducting Hose

Our stock of water hose is a most complete one and all orders for regular sizes may be placed with the assurance of immediate shipment. Two ply hose is not carried in any size or grade, but a sufficient quantity will be made to order. Three ply is carried in $\frac{1}{2}$, $\frac{3}{4}$ and 1 inch sizes, and four ply in all sizes up to and including three and four inch. We offer three reputable grades for selection. Water hose is subjected to so much abuse that it is not economical to buy cheap grades, and we neither carry nor care to sell hose which we cannot conscientiously recommend. When the proper grade is selected for the purpose, our brands of water hose will always give good service. Some conditions, however, require special hose, in which event we can furnish it promptly.

Elastic Brand

A moulded hose of great merit. Very strong and non-kinkable. While moderate in price, it gives exceptionally good service.

Water hose of any grade and size made to order promptly

Steam Hose

Without question, the most severe duty that rubber hose is called upon to perform is that of conducting live steam under pressure. It is not a difficult matter to construct a hose which will successfully withstand heavy bursting pressures, but the heat of the steam vulcanizes or hardens the rubber, causing it to crack and this permits the moisture to separate the plies of fabric. Vulcanizing by steam is the fundamental principle of rubber manufacture and temperatures as high as 274 degrees are often used. By observing the table below it will be noted that a steam pressure of 30 pounds generated 274 degrees of heat.

Standard brass valves made of steam metal are only intended for 125 pounds working steam pressure, and yet some users of steam hose forget that it is a wholly vegetable product. In some cases users have even expected rubber steam hose to conduct superheated steam.

Bullock Brand

Our Bullock Brand is as good an article as can be produced and is manufactured specially for us by a factory specializing in this kind of hose making. Made of wrapped duck and of braided construction it is both strong and flexible and resists to a high degree the destructive action of heat. Wall on 6-ply is $\frac{1}{2}$ -in. thick.

Castor Brand

A second quality hose. For light work it gives satisfactory service. Also used for conducting warm or hot water, for conducting live steam at over 20 pounds, however, we recommend Bullock.

Standard Steam Hose Price List

"Channon Special" Steam Hose

This hose consists of our Bullock grade made with a woven painted jacket on the outside and is preferred by many users of steam hose. The regular rubber hose is 4 ply in all sizes and the jacket makes it equal to 6 ply. The woven painted jacket protects the hands of the user from the intense heat generated by the steam and the hose from external moisture. Carried in stock in 50 foot sections in the sizes priced below.

Price Per Foot

Steam Hose should always be coupled with long shank couplings.

Hose

Elastic Molded Pneumatic Tool Hose

Triple Braided Construction

Elastic Pneumatic Tool Hose is furnished with an additional braided reinforcement over the regular plies of duck. This makes the hose stronger, more flexible and more satisfactory generally.

To withstand the hard usage to which pneumatic tool hose is daily subjected, it must be made as light and flexible as is consistent with requisite strength, so as to be easily handled by the workmen operating the hammers, drills or other pneumatic tools. Our Elastic brand is made of a special compound to resist the action of oils which escape from the air compressor. Not only does hose come in contact with oil on the inside, but on the outside as well, which necessitates an oil proof covering. Compression of air causes extreme heat which we have taken into consideration in selecting this hose. Pneumatic hose is used mostly in connection with hammers, hoists, drills and mining machines, and is always put to a severe test as to its flexibility and lasting qualities. For the best quality of pneumatic tool hose, "Elastic" cannot be equalled.

"Bullock" Gasoline Hose

Gasoline is one of the worst enemies of rubber and naturally in the manufacture of gasoline hose there are many things to be considered. We have devoted special attention to the manufacture of this hose, and are exceedingly familiar with its use. When conducting gasoline from a tank to an automobile, some gasoline is bound to stay in the hose. This is very destructive to the ordinary hose. Our Bullock brand is made to meet such requirements.

Price, $\frac{3}{4}$ -inch, 4-ply.....	\$1.00
----------------------------------------	--------

Glover Air Coupling

Composed of three simple parts; male and female and a rubber gasket attached to male end that cannot be lost or blown off. Has no inside springs or other delicate parts to get out of order, nor projecting lugs outside to catch on obstructions when hose is dragged around. It is the simplest and quickest acting coupling for air use made, a quarter turn of wrist connecting or disconnecting it. Will not become disconnected by any cause when under pressure. Air losses caused by leaky couplings in plants are enormous, sometimes 25 or 50 per cent of total amount used. The Glover is the only really air-tight and stay-tight coupling made. They are sold with the understanding that they may be returned if not all we claim or for any reason are unsatisfactory. A special illustrated pamphlet describing them in detail sent on request.

Size, inches.....	$\frac{1}{2}$	$\frac{3}{4}$
Price per pair.....	\$2.50	\$3.00
Extra Gaskets for above.....

Price each.....	\$0.12	\$0.28

"Bullock" Acid Hose

In buying acid hose the purchaser must remember that the thickness is not all to be considered. The rubber in the hose must be of such material that it will resist the action of the acids and also contain no minerals for the acids to feed upon. Our Bullock acid hose is the best on the market for this purpose. Prices quoted on application.

Everlasting Gasoline Hose

Everlasting gasoline hose is better than any rubber hose for conducting gasoline because gasoline will ultimately dissolve rubber in any form. There is absolutely no rubber used in the manufacture of this hose. Metal hose would scratch the car and is not flexible enough for all purposes.

This hose is low priced, guaranteed absolutely safe, and will not leak. It will fit any pump or tank. It is made of loosely wound metal, covered with a woven jacket. This combination makes it as flexible as rubber. Carried in 8 and 10-foot lengths. Diameter $\frac{3}{4}$ -inch.

Price per foot.....	\$1.20
Couplings. Price, per set.....	3.50

Flexible Steel and Copper Hose

Showing Hose with Braided Covering.
Sectional View of Hose Shows Spiral Construction.

Flexible metal hose is being used more and more every year owing to the demands of modern steam engineering for high steam pressures, and the realization of the need for a more lasting conductor for oil and other volatile. Rubber and fabric constructed hose, because of its cheapness and flexibility, has been largely used in the past, but it must be admitted that the uses of rubber hose are to a certain degree limited. There are many uses for flexible metallic hose to which rubber is not nearly so well adapted owing to the fact that the component parts of rubber hose are vegetable matter and are affected by temperature, oils and chemicals, which do not effect metal.

Flexible Metal Hose is especially adapted for the conveying of steam where the heat is equal or greater to the temperature required to vulcanize rubber; for suction purposes where the vacuum created has a tendency to cause rubber hose to collapse; for conducting gas, where a leak would be dangerous to property and life.

The pressure used in cleaning boiler flues produce temperatures so high that rubber hose is unsuited for the purpose, and flexible metallic hose can be used advantageously, for it stands the high pressures and is uninjured by being dragged around among hot ashes.

Flexible metal hose is made from continuous metal ribbon, wound spirally, the edges being crimped or turned in during the winding, forming an interlocking joint. Specially prepared asbestos cord is fed into a separate groove, packing the joint steam tight.

We list below the sizes generally used, but can furnish other sizes from $\frac{1}{2}$ to 12 inches in diameter.

Coverings.—Metal hose can be furnished with braided copper wires, protecting the hose from external injury. We cannot, however, furnish covered hose from stock. Phosphor bronze hose can be shipped immediately.

Soldered couplings are sweated on and should never be used on steam hose or in any service where there is sufficient heat to soften solder.

Couplings for steam hose are packed on with asbestos and red lead and will stand heavy pressure and high heat.

Price Per Foot

Flexible Steel Armored Rubber Steam Hose

Modern engineering practice requires the use of steam pressures higher than rubber hose is suited for. To meet this demand at a price less than that of flexible all metal hose, we offer our flexible steel armored rubber hose, suitable for steam or rock drill work.

The inner lining is essentially the most important part of the hose. It is made of identically the same compound that is used in our Bullock regular rubber and duck constructed hose and is well known for its heat resisting qualities.

The tube is protected on the inside by a ply of heavy duck which is kept in place by the special spun steel wire shown on the inside of hose and which is in turn surrounded by a layer of pure rubber.

Flexible steel armored rubber hose will stand pressures as high as can be expected from any rubber hose, and will be found far more durable and economical in the long run. It should be remembered, however, that standard wrought pipe is only intended for pressures up to 125 pounds, and when it is necessary to conduct steam under very high pressure it is advisable to use flexible bronze hose.

Rock Drill Couplings as used with this hose are made of malleable iron and when properly applied will never blow off. Ordinary long shank steam hose couplings are not suitable.

Suction Hose

Suction hose differs from conducting hose principally in being made to withstand a collapsing pressure instead of a bursting pressure. It is made in two forms, smooth bore and rough bore, the construction of both kinds being illustrated below. To give the hose the necessary strength and flexibility a spiral wire reinforcement is used. In the smooth bore hose the wire is entirely embedded in the rubber lining, making a perfectly smooth interior which offers no resistance to the free flow of the liquids or lodgement for deteriorating matter when the hose is out of use.

In the rough bore hose the spiral wire reinforcement is in direct contact with the fluids being drawn through the hose and appreciably increases the friction. Rough bore hose is suitable for perfectly clear liquids, but not being nearly so durable or economical as smooth bore hose, is not in great demand and is not carried in stock. It can be made to order in any length and size in about ten days' time.

Being large manufacturers and distributors of pumps, we carry at all times a large and well assorted stock of suction hose and can make immediate shipment of all orders. Our stock of suction hose is the largest in the West, factories not excepted, and consists of sizes 1½ to 8 inches in diameter, in 10, 12, 15 and 20 foot sections, with plain enlarged ends and with iron pipe nipples attached. In sizes 4 inches and larger we carry hose with nipples attached.

We particularly advise against the purchase of hose with plain ends unless it is desired to attach brass couplings. Experience has proven that the workman in endeavoring to attach iron pipe nipples to hose almost invariably injures the rubber lining, thus permitting the water to reach the duck insertion which loosens the lining and the suction soon breaks down.

Smooth Bore Construction

Rough Bore Construction

Bullock Brand Smooth and Rough Bore Suction Hose

Bullock Brand Smooth Bore Suction Hose is as good hose for general contractor's use as can be obtained. This is the same hose which we include in all our pumping outfits, and when properly used it will give entirely satisfactory service. It is carried in stock in all sizes up to 8 inches. Prices below do not include nipples for which another charge is made.

Bullock Rough Bore Suction Hose is made of the same quality materials as our Bullock Smooth Bore, but constructed differently as shown by the illustration. It will give satisfactory service when used in connection with clear or nearly clear water. It is not carried in stock. Shipments can be made in about ten days from receipt of order.

Channon Special Sand Suction Hose

For this severe service we particularly recommend our Channon Special Sand Suction Hose. It is made with smooth bore construction only and a special fine quality lining to resist the cutting effect of sand and gravel. Rough bore hose is not suitable for this work on account of the tendency of materials being drawn through the hose to cut away the rubber between the different spirals resulting in a general breakdown of the hose. This grade is not carried in stock but is made to order on short notice.

Smooth Bore

Inside Diam., Inches	Price per Foot	Inside Diam., Inches	Price per Foot	Inside Diam., Inches	Price per Foot	Inside Diam., Inches	Price per Foot

Rough Bore

Smooth Bore Agricultural Suction Hose

Agricultural Suction Hose is also known as Portable Suction or Tank Hose. We carry it in stock in the 2-inch size only in 10, 15, 20 and 25 foot lengths. It is well made, light weight, wire reinforced hose with smooth bore construction. Used principally with agricultural machinery for drawing water from tank to portable engine. Gives entire satisfaction for this service. The ends are enlarged to receive couplings.

Price per foot \$0.60

Agricultural Suction Hose with Woven Jacket

Constructed in the same manner as the Agricultural Suction Hose described above. It has in addition a woven cotton jacket thoroughly waterproofed to protect it from moisture. This should not be confused with a braided jacket which is not so serviceable. This style of Agricultural Suction Hose although costing a little more is more economical in the long run and is preferred by many. Smooth bore construction and ends enlarged for couplings, carried in the 2-inch size only in 10, 15, 20 and 25 foot lengths.

Price per foot \$0.80

Hard Rubber Suction Hose

This hose is made entirely without wire reinforcement to prevent collapse. Special duck and firm, rigid rubber stocks are used in place of the spiral wire in other suction hose. Carried in stock in the sizes priced all with four-ply of duck insertion.

Inside diameter, inches.....	¾	1	1¼	1½
Price per foot.....	\$0.65	\$0.75	\$0.93	\$1.13

H.Channon Company Chicago

Dredging Sleeves

Dredging sleeves are used as flexible connections between sections of pipe for conveying dredged material to bank of river, shore of lake or other depositing point. They are made 12 to 36 inches in diameter, of extra heavy duck and thick rubber lining, of special quality rubber to successfully withstand the wear of material being drawn through them.

Our factory is especially successful in manufacturing these sleeves, several having been placed in competition with other makes, some higher priced, and were found to outwear the others by several weeks' actual service.

As dredging sleeves are always made specially to meet various requirements, we do not give list prices, but gladly quote net prices on them, made to meet existing conditions. When inquiring, always give all information possible regarding work.

Rubber and Cloth Insertion Tubing

White Rubber Tubing

The uses of white rubber tubing are too numerous to mention. We carry two grades which answer for all ordinary purposes, in sizes from $\frac{1}{8}$ to 1 inch in diameter with light, medium or heavy wall, plain or corrugated surface, packed in boxes containing 50 feet.

A Grade, price per pound..... \$1.50
B Grade, price per pound..... 1.10

Special tubing of any quality or thickness of wall desired can be made to order. Prices quoted on application.

Cloth Insertion Tubing

The lining of our cloth insertion tubing is a high grade of rubber compound, made perfectly smooth, with two or more plies of cloth insertion, depending upon the size, and covered with a heavy jacket of red rubber. The sizes priced below can be furnished from stock in 50-foot sections.

Internal Diam., In.	Price per Foot	Internal Diam., In.	Price per Foot

Bullock Chemical Engine Hose

Made of the best materials procurable, necessary to produce a hose which gives satisfactory service for the purpose. The lining is made of a compound which resists the action of the chemicals conveyed. The duck is extra heavy to prevent kinking. Ends are reinforced with an extra ply of duck and capped with rubber to prevent moisture from reaching the fabric. Furnished with a black or red cover.

$\frac{3}{4}$ inch, price per foot..... \$0.60
1 inch, price per foot..... 1.00

"Sterling" Sand Blast Hose

Pressures used in sand blasting are not excessive, so heavy construction is unnecessary. Sterling Sand Blast Hose is made with a light 3-ply body, making it light and flexible for the operator to handle, and reducing the outside diameter.

The lining is pure up river Para rubber, vulcanized to the right degree to give it toughness and resiliency to withstand the cutting effect of the sand. Sand blast hose is never stocked, always being made to order. Any diameter and lengths up to 50 feet made on short notice. Priced upon application.

"President" Rubber Fire Hose

For municipalities desiring rubber fire hose we offer our President Rubber Brand, which represents the highest possible quality of materials and workmanship. Fine Para Rubber is used in both tube and cover and the duck is made from extra long fibre sea island cotton. The ends are reinforced and capped to preserve the duck from moisture. A 50-foot section of this hose in the 2 $\frac{1}{2}$ -inch size with couplings weighs about 65 pounds. Furnished in 2 $\frac{1}{2}$, 3 $\frac{1}{2}$ and 4-inch size. Prices quoted upon application.

Prices on Wire and Marlin Winding on application.

We furnish anything in Mechanical Rubber Goods. Prices quoted on lines not shown in this catalog.

Underwriters' Labeled Specification Cotton Rubber Lined Fire Hose

The Underwriters' Laboratories, Inc., an institution maintained by fire insurance companies of this country, have for years been testing different makes of hose, endeavoring to find one perfect or as nearly perfect as possible. Not finding it, they compiled rigid specifications for manufacturing hose which would meet their approval.

These specifications, approved by all fire insurance boards in the country, cover every detail, from selecting raw rubber for lining and cotton for jacket to finishing, testing and labeling each fifty-foot section.

Hose made to these specifications and tested is found to be the hose meeting any existing conditions. No article manufactured should be compounded more carefully because of the great responsibility placed in it at critical moments, when saving or losing thousands of dollars' worth of property depends on it.

Buying this hose, which has been subjected to inspection by the underwriters, makes it impossible for buyers to get an imperfect article. It must be right; it must meet all tests or it does not leave factory.

Double Jacket Hose is designed for constant and severe service in the larger fire departments. Outer jacket protects hose from external injury and gives additional strength to withstand heavier pressures than single jacket.

One of the Underwriters' tests subjects this hose to 400 pounds hydraulic pressure per square inch.

A special catalog containing the complete Underwriters' specifications sent on request.

The rubber lining in Single Jacket Hose is the same high quality rubber as used in the Double Jacket, and is intended for smaller fire departments of towns and villages where pressures do not exceed 250 pounds and service is lighter.

Also used for mill yard and factory fire protection. Should be carried on reels or carts and not folded on racks, which is injurious to lining. Tested to 300 pounds before leaving factory.

Price Per Foot—2½-Inch Only

Single Jacket, uncoupled.....	\$0.75
Double Jacket, uncoupled.....	1.00

"Sterling" Cotton Rubber Lined Fire Hose

Fire hose is certainly of sufficient importance in the general economy of things to warrant an equal position with not precedence over, other materials, in securing proper quality. The question of its reliability has assumed an importance far beyond that of any special interest or industry, regardless of size.

For this reason, quality should be considered first in purchasing fire hose. Some buyers, especially in smaller municipalities, reason that because their hose is not often called into service a cheap grade is sufficient. Nothing is further from the truth. All users of fire hose know that rubber deteriorates with age, whether used daily or remains idle on the reel for weeks. In order to have fire hose which will last long and be dependable, a high, and not cheap, quality should be selected.

Sterling Fire Hose is made for us by one of the most successful manufacturers in the country, and we know from our customers' experiences it meets all requirements.

The jacket is made from selected, long staple cotton, tightly woven, giving it strength and compactness. The rubber tube or lining is a high grade compound, rich in Para rubber, made in three layers, one calendered over the other to remedy in three thicknesses any "pinholes" or defects which might occur in the others. This method renders leakage impossible.

A thick rubber tube is no gauge of quality. Light lining of fine quality rubber is more durable, weighs less and much easier to handle.

Sterling Double Jacket Fire Hose is intended for city fire departments and is amply strong for any working pressure, each section being thoroughly tested before leaving factory, and fully guaranteed.

Sterling Single Jacket Hose is designed for fire protection service in medium sized towns, also for mills, factories, railroad and other shops where strong, durable hose is required. While lighter weight than double jacket, it is fully as serviceable, provided pressure is not so great and wear and tear less.

Fire hose is furnished only in 50-foot sections, coupled with expansion ring type, or "automatic," couplings, having different standards. Threads on fire hose couplings are generally special, different communities having different standards. We cut any thread on couplings, provided we are furnished with an old coupling or hydrant cap. If this is not convenient, give us outside diameter of male end of coupling and number of threads per inch.

Price Per Foot

Diameter, inches.....	2	2½	3
Single Jacket.....	\$0.65	\$0.75
Double Jacket.....	.80	1.00	\$1.40

Cotton Rubber Lined Fire Hose should always be coupled with expansion ring couplings, which are priced on another page.

Mill Hose

Cotton Rubber-Lined and Unlined Linen Hose

Cotton rubber-lined hose is designed for fire protection in mills and factories equipped with standpipe systems, also in place of rubber water hose. It is adequate for use in towns and villages where pressures do not exceed 200 pounds and hose does not receive rough usage as in city fire departments.

Many users of water-conducting hose prefer cotton rubber lined to duck and rubber construction. It is lighter in weight, more flexible, fully as strong and will give equal wear if properly cared for. It should be carefully dried after use to prevent cotton jacket from mildewing and rotting; wound on reels instead of being folded on racks which is harmful to the lining, and water passed through about every two months.

Sterling Brand

Sterling is our first grade. The jacket is woven from strong, long staple cotton yarn, and lining made of good quality rubber, with perfectly smooth waterway. It is recommended to our customers who desire the best, as it will remain good after ordinary mill hose deteriorates.

Sampson Brand

While Sampson is our second quality, we consider it equal to many "first quality" grades. The fabric is somewhat lighter and lining not so high quality rubber, as in Sterling, but with proper care will give good service.

About Couplings—Like fire hose, mill hose is usually coupled with expansion ring couplings, although common couplings can be furnished when desired. We can furnish pipe, hose or special thread, but when special thread is ordered couplings cannot be returned, nor order cancelled after work is started. We should be furnished with sample thread, such as an old coupling or hydrant cap. If inconvenient, the outside diameter of the male end and number of threads per inch will suffice. Couplings are listed on another page.

Underwriters' Unlined Linen Hose

Unlined linen hose is intended for emergency fire protection, to be folded on racks when idle, and as there is no rubber used in its construction, it does not deteriorate to any great extent. It is not a substitute for rubber or cotton rubber-lined hose. It is tightly woven and when water is admitted the yarns swell, making the hose water-tight. Carried in best grade only—the difference in price being out of proportion with difference in quality. Linen hose is not expensive and purchasing a cheap grade is poor economy. Furnished in any lengths from 1 to 2 1/2 inch sizes at net prices per foot.

Expansion ring couplings are generally attached. Prices on same will be found on another page.

The Underwriter Pipe

Made to the specifications of the Mutual Underwriter, in one size only. 2½x30 inches. Barrel is made of pure copper castings, 52% copper, 7% tin, 3% lead. Swivel handle, marine wound and painted red. Thread cut to any standard. Weight each, 10 pounds.
Price each.....\$12.00

Swivel Handle Play Pipes

Handles are placed to conform to position of pipeman without cramping his hand or arm into an unnatural position. It often happens that hose turns over two or three times when water is forced through it. If handle did not swivel, allowing pipe to rotate, it would be wrenched from pipeman, subjecting him to danger and pipe to harm. Cut shows wound and painted style.

Spray Nozzle

Made of cast brass. Needle valve regulates discharge from solid stream to fine spray. Made in ¾-inch size only. Weight each, 7 pounds.
Price each.....\$1.00

Cast Spray Nozzle

With Cock

Garden hose nozzle with cock. Three-quarters inch diameter by 5½ inches long.

Price.....\$1.00

The Elk Shut-Off Nozzle

This nozzle has fewer parts, more actual metal and greater strength than any other nozzle made.

The plug is solid, forming perfect ground joint with body, eliminating the danger of crushing. The nozzle can be reground if worn after long service. Handle is unbreakable. The walls and one end of the body are 1½ inches thick and will stand rough usage without injuring the nozzle. The waterway has a smooth, gradual taper with a straight way at the tip, giving a solid stream.

Nozzle is open when the handle lies back against the base. Can be used to break through a window without shutting off. When it is shut off, it may be dragged over the ground without danger of turning on.

When ordering be sure to state whether hose or iron pipe thread is required.

Improved Perfect Hose Coupler

Made of heavy brass throughout. The clamps and tubes are stamped in one piece. Clamps and swivel fit snugly together. The only tool needed is a hammer. Bend down clamps on hose and you have a perfect joint, neat, smooth, durable and cannot leak. The harder the pressure the tighter it holds. It is as smooth and strong as a factory inserted coupling and can be taken off and used again. In sizes, 1/2, 3/4 or 1 inch. Price, per dozen... \$4.60 Price, per pair... \$0.46

Steam Hose Couplings

With long shank, for steam hose or water hose under heavy pressure. Usually furnished with iron pipe thread.

For Hose, Inches	Per Pair	Per Dozen Pairs	Weight per Dozen Pairs, Pounds

Automatic Coupling Expander

This expander is better, stronger and easier to operate than any similar machine on the market. It has an adjustable shoulder, which permits it to expand different length couplings. Screw has a coarse pitch thread, so that expander works quickly, which can be reversed without pounding coupling loose.

Can be bolted to a bench or held in a vise. Size, inches, 1 1/4, 1 1/2, 2, 2 1/2. Price each... \$25.00

Iron Pipe Nipples

We furnish suction hose from stock with nipples, scored, wired and vulcanized into ends when made. We expressly advise against the user attaching nipples to hose, as lining is usually injured in so doing, which allows the moisture to get into contact with the fabric, this in turn ruins the hose. Hose is not guaranteed when this is done.

Size, Inches	Length, Inches	Price Each	Size, Inches	Length, Inches	Price Each
2	7	\$1.40	5	12	\$4.00
2 1/2	7	1.50	6	14	5.00
3	8	2.00	8	16	7.00
4	10	3.00			

Expansion Ring or Automatic Coupling

Coupling

Expansion Ring

The principal advantages of automatic hose couplings over common couplings is that by their use a smooth and unobstructed waterway is obtained. We furnish these couplings with pipe, hose or special thread. When special thread is ordered, couplings cannot be returned on account of thread, nor can order be cancelled after the work is started. Always send sample thread if possible, or state the outside diameter of the male end of coupling and number of threads to the inch.

Hose Racks and Reels

Royal Swinging Hose

Especially designed for unlined linen hose. Made of pressed steel with fittings of malleable iron. The hose is hung on zinc pins which cannot corrode and these swing free as each lap of hose is withdrawn; adjustable in width for 1½ to 2½-inch hose. Finishes: Japanese red, copper, gold or aluminum bronzed. When ordering state diameter of hose, finish and size of pipe clamps wanted. Furnished with red finish and wall brackets unless otherwise specified.

No. 18. For 25 to 75 ft. unlined linen hose. Weight 6 pounds. Price each \$5.00

No. 19. For 100 to 150 ft. unlined linen hose. Weight 8 pounds. Price each \$6.00

Hump Hose Rack

A feature of this rack is the hump in the center of the bottom which takes the weight off the folds of hose. The front of rack is partially enclosed, making it impossible to jerk too much hose off at once. Made of steel tubing and malleable iron castings. Usual finish, japanned red. When ordering state size, kind and length of hose, also finish required.

kind and length of hose, also finish required.

Above racks furnished in gold, copper or aluminum bronze without extra charge. Nickel, copper plate or solid brass polished at additional cost. Special catalog on application. Pipe clamps to 4-inch furnished when ordered, without additional charge.

No charge is made for pipe clamps up to 4 inch, inclusive. State size wanted.

Swinging Hose Reel

Made of steel tubing, rod and wire and malleable castings. Can be adjusted to run tight or loose. It will swing to any angle from the wall, takes up little space and is one of the most durable reels made. The hose cannot knot or twist when being unwound. The only swinging wall reel made which will hold 150 feet of cotton rubber lined hose. Furnished with wall brackets and finished in vermilion unless otherwise specified, but may be had in gold or silver bronze finish without extra charge.

No.	Size of Hose, Inches	Cap. Hose in Ft.		Dimensions, Inches	Price Each
		Unlined Linen	Rubber Lined Cotton		
0	1½	50	3 x 15	\$ 6.00
00	2	50	3½ x 15	6.00
000	2½	50	4½ x 15	6.00
2	1½	150	50	3½ x 26	6.00
2½	2	100	4½ x 21	6.00
3	2	150	50	4½ x 26	6.00
3½	2½	100	4½ x 21	6.00
4	2½	150	50	4½ x 26	6.50
5	1½	300	100	5½ x 26	7.50
6	2	300	100	8 x 26	8.00
7	2½	300	100	9 x 26	8.50
8	2½	400	150	9 x 32	11.50
